Why the World Bank pours money into Brazil, Page 18

NEWS SUMMARY

GENERAL

UK ports peace hopes fade

Hopes that the British national docks strike was crumbling were dashed when dockers failed to return to work in large numbers at the Port of London's Tilbury docks, the country's biggest. This was despite the result of a ballot which showed that the majority wished to go back to work.

The employers fear that the strike would continue until the miners' dispute is settled. Although its effects are patchy, the stoppage is becoming increasingly expensive and inconvenient for companies.

The Transport and General Workers union also tightened its grip on other ports like Tees in North-east England and Great Yarmouth in East Anglia. Page 20

Gromyko talks

Moscow has indicated that Foreign Minister Andrei Gromyko would be willing to have talks with U.S. President Ronald Reagan after attending next week's UN General Assembly opening in New York. Page 3

Tanker 'attacked'

Iraq said its war aircraft hit a "large naval target," a term generally used to describe an oil tanker, south of the Iranian oil terminal at Kharg Island in the Gulf.

Equipment salvaged

Salvagers retrieved two crates of sophisticated Soviet-bound electronic equipment washed out of the Mont Louis, the French freighter that sank with a cargo of uranium hexafluoride. Page 2

N-cargo warning

British seamen will refuse to handle nuclear cargoes unless international shipping regulations are improved within a month, said Jim Slater, the head of the British Seamen's Union.

Sri Lanka mine

Nine soldiers were killed and four wounded in Sri Lanka's troubled northern province when separatist guerrillas blew up an army convoy with a land mine.

Pravda attack

Soviet newspaper Pravda accused the West of trying to exploit religious and nationalist feelings in the Soviet Union, where American evangelist Billy Graham has started a 12-day tour.

Passengers return

All 53 Iranian passengers, released from the hijacked Iranair jetliner Saturday flew home Monday. They included 13 children and 11 women.

Ethiopian party

14 Col Mengistu Haile Mariam, who has led Ethiopia since the overthrow of its feudal monarchy 10 years ago, was elected head of the Marxist-Leninist Workers Party, the country's first political party. Page 5

Portugal protest

About 40 suspected urban guerrillas started an indefinite hunger strike in their cells in Lisbon to back demands for improved conditions of detention.

Indian curfew

Troops with "shoot on sight" orders manned key points in the tense southern Indian city of Hyderabad, under indefinite curfew after nine people died in Hindu-Muslim clashes. Rama Rao returns, Page 5

European noise

The European Commission announced a two-stage plan to curb vehicle noise. Page 2

BUSINESS

Dollar tests DM 3 level

DOLLAR finished in New York at DM 3.0147, its first close above DM 3 since floating exchange rates began in March 1973. In earlier Far Eastern and European trading it had touched that level but by the London close its gains on the day were pared to DM 2.9890 (DM 2.9840), SwFr 2.4910 (SwFr 2.4844), FFf 9.1150 (FFf 9.1575) and Y245.50 (Y245.50). On Bank of England figures its trade-weighted index rose to a record 140.0 from 139.4. Against other currencies, final New York rates were SwFr 2.503, FFf 9.2575 and Y246.35. Page 43

STERLING rose 35 points against the dollar in London at \$1.2770. It also improved to DM 3.62 (DM 3.6050), FFf 11.72 (FFf 11.67), SwFr 3.18 (SwFr 3.1625) and Y313.75 (Y312.75). Its trade-weighted index stood at 77.1 from 77.6. In New York it closed at \$1.2715. Page 43

TEA prices rose sharply at the London weekly auctions, in the wake of last week's announcement of Indian export restrictions. The quality tea price gained 30p to 82p a kilo. Page 42

GOLD rose \$2.75 an ounce on the London bullion market at \$338.75. It closed in Frankfurt at \$338.50 and in Zurich at \$371.25. In New York the Comex September settlement was \$338.40. Page 22

WALL STREET: The Dow Jones industrial average closed 4.86 down at 1,202.32. Section III

LONDON gilts were buoyed by hopes of a breakthrough in the UK miners' strike, but equities failed to maintain a rally. The FT Industrial Ordinary index closed 4.3 down at 847.4. Section III

TOKYO: The Nikkei Dow market average fell 29.17 to 10,471.53. Section III

VOLVO, Scandinavia's biggest industrial corporation, is planning a \$78m cash offer for a further 4m shares in Hamilton Oil, U.S. oil group, pushing its stake close to 50 per cent. Page 21

PFAPF, the West German sewing machine manufacturer, boosted sales and profits during the first half of the year, with the share of revenue from overseas operations rising to 68 per cent. Page 21

VALLOUREC, the leading French steel tube manufacturer, is negotiating the sale of a controlling interest in its banking subsidiary to Bruxelles Lambert. Page 21

FLDOR, California-based mining, engineering and process plant construction company, reported a third-quarter earnings drop to \$1.9m against \$3.8m a year ago. Page 21

HORIZON HOLIDAYS, the third largest UK tour operator, has terminated its agency agreement with Pickfords Travel after disagreement over the extent to which Horizon Holidays have been promoted.

Production difficulties in London may have resulted in typographical errors in unit trusts, some advertisements and elsewhere in today's edition.

Israel to ask U.S. for up to \$1bn in special aid

BY DAVID LENNON IN TEL AVIV

ISRAEL will ask the U.S. this month for up to \$1bn in supplementary aid to tide it over its current economic difficulties, which include a growing foreign debt, falling foreign currency reserves and 400 per cent inflation.

It will also ask Washington to deliver the \$1.2bn in regular economic assistance for 1985 by the end of December this year, rather than in quarterly instalments.

The requests will probably be made by Mr Yitzhak Mordechai, the Finance Minister-designate, in the new Labour-led national unity Government, which is expected to win parliamentary approval tomorrow.

Despite strong misgivings within the Labour party over the concessions made by Mr Shimon Peres, the Prime Minister-designate, to the right-wing Likud faction on both ideology and ministerial appointments, the central committee last night approved the coalition agreement.

Mr Yigal Cohen-Orgad, Finance Minister in the outgoing Likud Government, noted yesterday that despite the many gloomy economic indicators, the 25 per cent reduction in the trade deficit in the first eight

months of this year had been an important achievement. That was the result of a 12.5 per cent growth in exports, to \$3.5bn, and a 4.3 per cent reduction in imports, to \$5.4bn. If that trend continues to the end of the year, the trade deficit will have been cut by some \$850m in 1984, Mr Cohen-Orgad said.

That welcome development will be one of the elements pointed to by Israel when it seeks increased U.S. assistance. However, the Minister noted that Israel can only expect a positive response from Washington after it has begun to implement a comprehensive policy to deal with the country's economic woes.

One of the most pressing of these is the reduction in foreign currency reserves, which fell by a third in the last three months. The outgoing minister said they would fall further to \$2.1bn, before the end of the year because of the Treasury decision not to increase short-term borrowing this year.

The Treasury and the Bank of Israel have prepared austerity programmes that they would like the incoming government to adopt. It is possible, however, that the plans will have to be abandoned or

amended as the new minister has a different economic approach from that of his predecessor.

Mr Mordechai, leader of the Liberal party in the Likud bloc, has admitted that he may have to pursue anti-liberal policies in the first instance. In principle, however, he opposes the policy of fighting inflation and the balance of payments deficit by creating a recession.

Mr Mordechai favours borrowing more from the U.S. to prime the pump of economic growth, thus making it easier for Israel to repay its huge loans.

At the same time, the new minister does agree with the proposal to reduce inflation by limiting the rise in wages and prices, either with the voluntary agreement of the unions and industry or by compulsory measures.

Mr Menahem Begin, the former Israeli prime minister who has become a recidivist since resigning last September, was admitted to hospital yesterday suffering from urological problems.

The Shaare Zedek Hospital in Jerusalem said the former premier was in good spirits and that it had yet to be decided if an operation would be necessary.

Prior's departure leads to UK Cabinet shuffle

BY PETER RIDDELL, POLITICAL EDITOR, IN LONDON

BRITISH Cabinet and ministerial changes announced yesterday include the appointment of a new Northern Ireland secretary, Mr Douglas Hurd, who will take over from Mr James Prior. Mr Prior is leaving the Government to become chairman of GEC, the electronic and engineering group.

Mr Hurd, at present a Minister of State at the Home Office, has been knocking on the door of the Cabinet for some time. His appointment signals a new initiative, since he is principally regarded as a reticent and unassuming administrator and negotiator.

Mr Hurd, aged 54, is a former diplomat and Foreign Office minister. He has also written a number of successful political thrillers, including

one entitled *Vote to Kill* on an Irish terrorist plot against the Prime Minister.

Mrs Margaret Thatcher last night announced a limited series of other ministerial changes.

The moves will not affect the political balance of the Cabinet, and Mrs Thatcher will wait 12 to 18 months for a big shake-up of her ministerial team in preparation for the next general election.

Apart from Mr Prior, only Lord Cockfield, the Chancellor of the Duchy of Lancaster, and Lord Bell, Minister of State for Local Government, are resigning, both voluntarily.

Lord Cockfield, along with Mr Stanley Clinton Davis, a former Labour MP and junior minister, are to

serve as the two nominated British Commissioners in Brussels for four years from next January. Lord Cockfield has served as Trade Secretary and as a Treasury Minister.

The nomination of Mr Davis, who was an MP until the last general election and has been a critic of the European Economic Community, was made after consultations with Mr Neil Kinnock, leader of the Labour opposition.

The only other Cabinet level change is the appointment of Mr David Young, the chairman of the Manpower Services Commission, as Minister without portfolio. He will become a life peer with a similar wide-ranging remit on economic matters to that of Lord Cockfield.

Editorial comment, Page 18

Australia sets terms for foreign banks

BY MICHAEL THOMPSON-NOEL IN SYDNEY

MR PAUL KEATING, the Australian Treasurer, yesterday invited foreign banks to submit applications by November 23 for an unspecified number of new banking licences. His decision, which follows several years of debate over the issue, seems likely to touch off a fresh round of intense lobbying by leading U.S., European, Japanese and other Asian institutions. The new licences will be formally granted in early 1985.

At the same time, a limited Australian banking licence is to be granted to the Bank of China, the Chinese foreign trade bank, as a special case. That follows talks last February between Chinese officials and Mr Bob Hawke, the Australian Prime Minister, who is keen to strengthen ties between the two countries.

The Government would like to see at least 50 per cent Australian equity in the proposed new banks, although Mr Keating said the level of foreign ownership might exceed 50 per cent if the potential economic benefits were great enough.

The invitation to foreign banks after the decision to throw open the

previously insulated Australian banking market is the latest in a series of financial reforms initiated by Mr Hawke's Labor Government, which has already floated the Australian dollar and scrapped most foreign exchange controls.

The government has not said how many new banking licences it is prepared to grant. Nor has it specified minimum terms or conditions. It is open to the applicants to state what they are prepared to offer. Only then will the Government make specific decisions on the number of new entrants, their geographic spread and the balance of foreign and local equity.

Mr Keating said it was unlikely that many applicants would want to set up large retail branch networks. Among foreign banks, only the Bank of New Zealand and Banque Nationale de Paris have full banking licences at present. More than 100 foreign banks have representative offices in Australia and many have finance company, merchant bank or money market subsidiaries.

U.S. move on high tech code

By Nancy Dunne in Washington

THE U.S. Commerce Department last night gave way to pressure from the U.S. business community and foreign governments in proposing a revised set of rules governing multiple shipments of strategically sensitive products.

A set of proposals made in January elicited more than 250 comments, many of them outraged, from the individual companies, trade associations and U.S. trading partners. The rules, designed to tighten the programme of distribution licences, which allows multiple shipments on a single licence, restricted the use of such licences to companies with proven compliance records, required lists of expected end-users from U.S. customers and imposed other extra-territorial requirements on consignees.

The revised rules represent a considerable modification of the originals. They place a greater emphasis on "self-politely" by the U.S. companies while at the same time establishing an extensive pre-licence review process.

IFC unit of World Bank may tap capital markets

By Stewart Fleming in Washington

THE INTERNATIONAL Finance Corporation (IFC), an affiliate of the World Bank, is actively examining the possibility of raising funds on the international capital markets under its own name rather than borrowing them indirectly through the World Bank, IFC officials said yesterday.

Such a move would have obvious attractions for the World Bank, which is having to cope with the reluctance of the governments that finance it, led by the U.S., to raise its capital resources as generously as bank officials believe is necessary.

At present, the IFC depends on the World Bank entirely for the funds it borrows. That financing mechanism means the Bank must employ its own capital base to support borrowings on the financial markets which are channelled to the IFC. The IFC's claims on the World Bank's increasingly scarce capital resources are likely to increase sharply in the next few years as a result of its expansion plans.

The IFC's role is to provide loan and equity finance for private-sector ventures in developing countries. Recently, it announced plans to step up sharply its operations through a five-year programme calling for investments of \$7bn by the IFC itself in projects costing around \$30bn in the years 1985-89. As part of that expansion, it is expected to borrow some \$2bn over the next five years.

Historically, the IFC has relied on the World Bank for its loan finance. Its equity capital is paid in full by shareholder nations. The World Bank itself is seeking ways to stretch its resources further, partly because of the much less generous increases in its own equity base that have been forthcoming or are expected.

If the IFC were to begin to borrow in its own name, that would relieve the World Bank of the responsibility of funding the IFC on the back of its own capital resources.

The IFC is currently examining the terms on which it could enter the financial markets, which would probably be less favourable than those which the World Bank can command.

Mondale gives deficit issue top priority

BY REGINALD DALE, U.S. EDITOR, IN WASHINGTON

MR WALTER MONDALE yesterday announced one of the most detailed pre-election fiscal recovery programmes in U.S. political history, acknowledging that he was gambling on the good sense of American voters to see that continuing federal deficit budgets could no longer be tolerated.

Mr Mondale, the Democrat underdog in November's presidential contest, said that "every penny" of the tax increases he was proposing would go into a kind of "trust fund" to pay off the deficit.

New government spending would also have to be based on the "pay as you go" principle, he said in Philadelphia. That meant that "there will be no spending without an earmarked new source of revenue."

After presenting his plan, Mr Mondale said his cards "are on the table, face up," unlike Mr Reagan's. Pursuing his theme that Mr Reagan is concealing plans for a tax increase if re-elected, Mr Mondale challenged the President to put his own detailed plans on the table.

He knew that by enthusiastically espousing tax increases he is taking an enormous risk with the middle-class vote for which he and Mr Reagan are competing. He hopes he can call on the natural "good housekeeping" sense of those voters and persuade them that only the upper echelon, will really feel the pinch.

One measure of the extent of his

problem is that the White House is delighted that he is wrapping himself in the tax cloak. For over 200 years Americans have been averse to paying taxes, and it is Mr Mondale's task to persuade the majority that it is others who will be doing so.

Mr Mondale used estimates by the independent Congressional Budget Office (CBO), as a base for his claim that he can reduce the deficit by two thirds by fiscal 1989, which starts on October 1, 1988. That would be the final year of a first Mondale term in the White House if he wins in November. The Administration claims that the CBO figures are highly exaggerated.

Mr Mondale said his programme would reduce the \$283bn deficit projected by the CBO to \$86bn, a cut of \$177bn. Tax increases would contribute \$65bn to the reduction, falling principally on corporations and on individual families earning more than \$25,000 a year.

Spending would increase by \$30bn a year, primarily on domestic programmes such as education and the environment, with cuts of \$8bn in other unspecified areas. Defence spending would be cut by \$25bn, mainly through cancellation of big-ticket items that Mr Reagan regards as key elements of his strategic build-up - the B-1 intercontinent-

Bonn faces another battle over wages

BY RUPERT CORNWELL IN BONN

ANOTHER wage battle is approaching in West Germany, this time over the demand of the main OTV public servants union for a 5 per cent increase coupled with 10 extra days of paid holiday a year.

The three parties in the country's coalition Government, which will have the daunting task of bargaining with OTV, attacked the claim at the weekend.

By adding an effective 10 per cent to wage costs of some 2.3m state-employed workers, the claim would threaten the Government's success in bringing down the budget deficit, they said. It might also jeopardise the ambitious DM 20bn (\$6.7bn) two-stage tax reduction package planned by 1988, according to critics of the union.

Count Otto Lamsdorff, the for-

mer Economics Minister, accused OTV of wanting to provoke serious new labour disruption this autumn. "The claim is politically motivated, as were those in the engineering and printing sectors earlier this year," he declared.

The union has set its sights considerably higher than the 3.3 per cent increase (coupled with a cut in the working week from 40 to 38.5 hours) won by engineering workers, and followed in several other important branches of industry.

OTV feels its claim is justified. Frau Monika Wulf-Mathies, its president, has argued that public service workers have lagged behind

EUROPEAN NEWS

Electronic equipment bound for Moscow found in N-cargo ship

OSTEND, Belgium - Salvagers have retrieved two crates of sophisticated electronic equipment bound for the Soviet Union which had been washed out of the sunken French freighter, Mont-Louis, officials said.

Environment Ministry officials said one of the crates came ashore on the beach of Wenduise, a resort north-east of Ostend. Another box was found floating near the wreck of the ship.

The Mont-Louis, which was also carrying a cargo of poisonous uranium hexafluoride, sank on August 25 after a collision with a ferry.

Both crates carried inscriptions

in Russian and identified the manufacturer as the French electronics company, Thomson, the officials said.

Flemish Nationalist Senator Oswald van Ooteghem said at the weekend that the freighter was carrying French weapons and high-technology equipment to the Soviet Union.

Gale-force winds and a heavy swell forced an empty barrel out of the Mont-Louis' holds overnight, but salvagers easily spotted the bright yellow container and lifted it on to a working platform moored alongside, the Belgian officials said.

They said Belgian naval craft

were fighting an oil slick one kilometre long which had seeped out of the Mont-Louis, but force eight winds and four-metre waves made any other work around the wreck impossible today.

A second working pontoon, which salvagers had planned to moor next to the wreck to break the waves and provide some shelter, was tugged back to the port of Antwerp after its 10-tonne anchors were damaged in the storm, they said.

Reuter

PAUL BETTS adds from Paris: The French Maritime Ministry declined to disclose the contents or nature of the cargo en route to Moscow before the ship sank.

Socialist pressure to pull Spain out of Nato

By David White in Madrid

A STRONGER-than-expected lobby in favour of outright withdrawal from Nato has emerged in Spain's ruling Socialist Party in the run up to a party congress in December.

Roughly a third of regional party meetings held over the weekend to prepare for the national congress passed anti-Nato resolutions, rejecting the leadership's more moderate stance.

The line taken by the party in December will have a crucial bearing on the outcome of a referendum on the Nato issue promised by the Government for next year.

The argument pits the "official" line of the party, which is ambiguous on Spain's future in Nato but seems to point towards a continuation of the status quo, against the "critical" or "left" faction which favours neutrality.

Spain joined the alliance just over two years ago but the process of integration into Nato's military structure was halted shortly afterwards when the Socialists won power.

Opponents of Nato membership within the cabinet of Sr Felipe Gonzalez have in the interim appeared to moderate their position because of the potential problems raised by withdrawal, both externally and internally.

However, the Nato question has now become the main factor dividing the different factions within the party, more than arguments over economic policy.

The Socialist-leaning trade union federation, the Union General de Trabajadores (UGT), has already expressed its opposition to Nato. This was reaffirmed yesterday by its leader Sr Nicolas Redondo, but he said that the union would accept the decision of the Socialist congress.

The congress will be the first the party has held since its general election victory in October 1982.

MEPs SET TO CONTINUE BLOCK ON FUNDS

UK rebate unlikely to be cleared

BY QUENTIN PEEL IN BRUSSELS

BRITAIN'S hopes of getting back its 1983 EEC budget rebate of Ecu 750m (£450m) from the European Parliament are likely to be dashed again this week because of the continuing deadlock over a supplementary budget for 1984.

European MPs meet in Strasbourg from today to debate the continuing EEC budget crisis precipitated by Britain's insistence on long-term spending controls, particularly on financing form surplus.

In spite of the fury of British members, and the diplomatic efforts of several EEC governments, including Ireland, the current president, and France, the MEPs remain adamant that they will not release the outstanding cash before more

money is forthcoming for the current year.

The debate is likely to be further complicated by the dispute between the European Commission and the Council of Ministers over just how much money is available, and is needed, to fund agricultural spending for the rest of the year. Whereas budget ministers believe they can cut the spending gap to only Ecu 1bn, the Commission contends it will need at least Ecu 500m more.

Mr Christopher Tugendhat, the commissioner responsible for the Budget, will put the Commission's case to the MEPs today, arguing that member governments have over-estimated the revenues available.

However, Mr Jim O'Keefe,

the Irish minister who is chairman of the Budget Council, will be seeking to persuade MEPs that sufficient progress has been made between Britain and its partners to approve the 1983 rebate.

British negotiators at last week's Budget Council conceded for the first time that some extra finance could and should be made available for the 1984 over-spending. But they insisted that prior agreement must be reached on long term budget discipline, on how and when the EEC's revenues are to be increased, and on how and when the 1983 and 1984 budgets rebates will be paid.

The budget is the one area on which the European Parliament has effective power over both

the Commission and the Council of Ministers, apart from sacking all the commissioners. MEPs have formally agreed that no rebate will be paid before the 1984 cash crisis is resolved.

Brendan Keenan adds from Dublin: The broad outlines of Commission proposals on the accession of Spain and Portugal are expected to be presented to the special foreign ministers meeting in Dublin today.

Officials here suggest the most that can be expected today is agreement to put specific proposals to Spain and Portugal as a firm basis for negotiation. The main problem is how to absorb Spain's massive wine and olive oil production in a Community with a surplus of both.

From now on a new name will be in front.

More than 7500 people put their trust in the cars we lease or contract hire to their companies. They work for themselves, for multinationals, for medium sized companies or for small family businesses. Their cars are all sizes, makes and nationalities. Being businessmen, they demand trouble-free, cost effective motoring without unreasonable cost. Personally, they want to do business with a service minded company of integrity. That's why they all come to LeaseLine. It's a new name to you, but watch out for it. It's going to be in front from now on.

Reduction ordered in car and lorry noise

BY OUA BRUSSELS CORRESPONDENT

EUROPE'S MOTOR manufacturers have been ordered to reduce by almost half the noise levels of the cars and lorries they produce in the EEC under a regulation approved last week by the Council of Ministers.

The move, to come into effect from January 1, coincides with a European Commission proposal to cut motor-cycle noise levels by the same average level, but only from October, 1986.

The regulations for motor vehicles were greeted with concern yesterday by officials at Britain's Society of Motor Manufacturers and Traders, who argued that the transitional period for introducing quieter models was too short, and that the restrictions would also add significantly to costs.

The average noise reduction for all types of motor vehicle under the EEC regulations is

of just under three decibels, which amounts to a cut in actual noise levels of almost half, according to the Commission.

The regulations apply to all models introduced after January 1, and to all vehicles being manufactured from 1989. Cars must comply with a maximum noise level of 77 decibels, light commercial vehicles with 78-83 decibels, and heavy goods vehicles with 81-84.

The proposed motor cycle restrictions would bring the whole of the EEC into line with several countries which have already adopted similar noise levels, including Italy, Belgium, Czechoslovakia and Spain.

However, Mr Edward Wilson, director of the International Office of Motorcycle Manufacturers in Paris, warned that they could add between 10 and 13 per cent to the price of new models.

Dollar forecast to remain strong for years

BY PHILIP STEPHENS IN BRUSSELS

THE STRENGTH of the dollar against major currencies is not a temporary phenomenon caused by high U.S. interest rates but is based firmly on the superior performance of the U.S. economy, a leading West German economist said yesterday.

The implication, according to Dr Herbert Giersch, president of the Kiel Institute of World Economics, is that the U.S. currency is not greatly overvalued and will remain close to present levels for several years.

He told a meeting of businessmen organised by the Conference Board that forecasts of a collapse in the dollar's value

as the U.S. current account deficit widens ignore the fundamental factors underpinning the currency. The dollar's rise in recent years reflects the much faster adjustment process in the U.S. than in Europe during the 1970s to prepare for faster economic growth.

The capital inflows financing the U.S. current account deficit were not "induced" financing reflecting the combination of a tight monetary and a loose fiscal policy, Dr Giersch said. Instead, they are voluntary flows mirroring the success of the U.S. economy in raising profits to levels which match the present high real interest rates.

This "flagship" theory of the

U.S. economy implies that until Europe catches up—by cutting real wages, raising productivity in line with high interest rates and adapting to technological change—foreign funds continue to sustain the dollar.

Dr Giersch said that this adjustment to faster growth in Europe may well take between five and ten years. He contrasted the flexibility of the U.S. economy, with wages falling in line with shortages of capital, deregulation of major industries, and the creation of millions of new jobs with what he termed the "Euroclerosis" afflicting countries on this side of the Atlantic.

Real wages in Europe are probably about 10-15 per cent too high, he said, while innovation remains stifled by corporatism, state controls and excessive trade union power.

The adjustment process needed to catch up with the U.S. could be shortened by a concerted movement towards freer trade, but the prospects appear dim for the next few years.

Europe's best hope, he said, is that the demand provided by the U.S. trade deficit will boost the profitability of investment in its export sector, transmitting some of the driving power for sustainable growth from the U.S. This will depend, however, on businessmen appreciating the dollar is likely to remain strong over the medium term.

Pan Am. First In Space.

The first thing you notice as you enter the First Class cabin of a Pan Am 747 is the extraordinary feeling of space.

First In Comfort.

As you settle into your Space Seat, the Pan Am Sleeperette® seat, this sense of spaciousness becomes even more impressive.

In fact, when the seats are upright you'll find it nigh impossible to touch the seat in front.

But above all, there's space to give you something so very rare in air travel today, a sense of privacy.

First In Food And Wine.

All this space means more comfort to enjoy one of the greatest dining experiences in the sky.

There's a tempting selection of delicious starters, sumptuous entrées, and exotic desserts.

And accompanying all this fine food are fine wines carefully selected by Pan Am. Wines that travel well, and go well with travelling.

First To Manhattan.

But with Pan Am, First Class doesn't end when you touch down.

Awaiting Pan Am's daytime flights to New York is a free helicopter service for First Class passengers. It whisks you to Manhattan in about eight minutes. There's also a free helicopter service to Newark.

Meeting Pan Am's evening flight is a free limousine into Manhattan.

Be sure to book one of these when you make your reservation.

First In Service.

Pan Am is proud of a 57 year tradition of fine service. Truly First Class from the

Pan Am. You Can't Beat The Experience.

The helicopter service is provided by Pan Am Helicopter Service, Inc.

time you're welcomed aboard till the time you alight from your plane, helicopter or limousine.

After all it was Pan Am that invented luxury in the air. So why not try some on your next trip to the States?

Pressure on Kremlin allies 'aimed at frustrating the West'

BY DAVID BUCHAN IN LONDON

THE RECENT successful Soviet pressure put on the leaders of East Germany and Bulgaria to cancel visits to West Germany are part of a wider Kremlin effort to frustrate the Western policy of "differentiation" in favour of certain East European countries.

This was spelt out by Mr Mikhail Gorbachev, the second ranking Soviet Politburo member, in a weekend speech in Sofia at celebrations to mark 40 years of communist rule in Bulgaria.

According to this "notorious differentiated policy", Mr Gorbachev said, "the imperialists insolently state their right to punish some socialist countries and to reward others."

But Mr Gorbachev, who appears to retain under President Konstantin Chernenko the prominence he won under Yuri Andropov, warned that "in the fight which imperialism is imposing upon our community, no one can stay aloof."

The message was clear: Moscow's East European allies must toe the Soviet line and, in the present icy state of East-West relations, must not reciprocate Western overtures. The corollary of the new Soviet strategy is that if any thaw is to

come from the East, it will come from Moscow first. Soviet officials said yesterday that Mr Andrei Gromyko, the Soviet Foreign Minister, was ready to go to Washington after this month's UN General Assembly to meet President Reagan, if the latter wished it.

At the same time, Marshal Sergei Akhromeyev, the new Soviet Chief of Staff, described as "just a regular change" his sudden replacement of Marshal Nikolai Ogarkov last week.

Western analysts have been left largely in the dark by the announcement of Marshal Ogarkov's transfer to "other duties", an evident demotion for the Soviet Union's top soldier.

In an unusual television interview, broadcast from Moscow on U.S. television, and evidently intended to defuse crisis talk, the new Chief of Staff said that Mr Chernenko was carrying out his duties.

Military issues, in particular whether the relatively weak Soviet economy can match the Reagan administration's increased spending on weapons without re-engaging Washington in arms control talks, are at the core of Kremlin policy concerns.

French Communists find nerve to make the break

Paul Betts watches the death throes of the Union of the Left

THE FRENCH Communists have just hammered the final nail into the coffin of the unhappy, often stormy Communist-Socialist alliance by announcing that they no longer see themselves as part of the parliamentary majority.

Although they have yet to cross formally to the opposition benches, this will without doubt happen at the end of the year, when the party votes against the Government's 1985 austerity budget.

This will mark the end of a 13-year period, in which Socialists and Communists linked up in a so-called Union of the Left to topple the Right and secure the reins of power.

It will leave the Socialists to rule alone, while the Communists strive to regain support among the working class and try to reverse their recent alarming electoral decline.

The depth of feeling and bitterness the divorce is causing emerged in the open at the weekend. M Lionel Jospin, the first secretary of the Socialist party, put the blame squarely on the Communists. He accused them of first pulling out of the coalition government this summer and now of the parliamentary majority to resolve their own internal crisis.

Communist participation in government had increased the internal tensions over the historic role and future of the party. "Withdrawing the Communist ministers from the Government meant putting an

end to the ferment, the agitation, and the contradictions," M Jospin suggested, adding: "In a country like ours, a party which does not debate is a party which no longer breathes..."

President Francois Mitterrand said in an interview this week that he expected the Communists to go into opposition quickly. In any case he added, the Union of the Left had been dead since 1977—the year of the first split in the alliance which led to the defeat of the Left in the 1978 legislative elections.

The Communists blame the divorce on the Socialist Government's economic austerity policies and the breach in the left-wing coalition programme of 1981.

After a three-month silence, M George Marchais, the Communist secretary general, said at the weekend during the party's annual popular rally—the fete de l'Humanité—that the Communists "had no responsibility for the running of the country," that the new budget "will be a bad one," and that the party was now launching "a large gathering of popular forces in the country."

After hesitating for several months, the Communists have decided to go back to basics and revert to their traditional and familiar role of a working class opposition party. The reformists (or renovateurs) in the party have been silenced. The old

Stalinist guard has reasserted its control. M Marchais, under whose leadership the party has sunk in 12 years from more than 20 per cent of the popular vote to 11.28 per cent in last June's European elections, has

split, the party ended up confining its own rank-and-file as well as increasingly infuriating its Socialist partners. M Marchais, who is at his best in a clear cut opposition role, and several other top party members decided immediately

After hesitating for several months, the Communists have decided to return to basics and revert to their traditional role of a working class opposition party. The reformists have been silenced. The Stalinist old guard has reasserted its control.

managed to salvage his political career by forcing through the separation with the Socialists. He now seems certain to be re-elected as secretary general at the party's 25th Congress next February. Three months ago he was regarded as on his way out.

The truculent leader—depicted on a French national television satirical show these days as the Muppet Miss Piggy—felt increasingly uncomfortable with the party's co-operation in government with the Socialists.

Externally, the strategy was to prepare the new opposition line criticising the Government's economic policies, trying to win back its popular base, attracting the votes of discontented members of other parties, and hardening the position of the pro-Communist CGT union.

The first salvoes were fired in August against the Government's approach to the troubles of the motor industry. The party's main economic spokesman, M Philippe Herzig, then attacked broad industrial policy claiming that restructuring cannot be achieved simply by dismissing thousands of workers.

The attack was subsequently broadened to cover M Fabius, of whom the Communists have always been deeply suspicious. M Fabius, in his first major television appearance since becoming Prime Minister, said last week he considered the Communist still to be members of the majority. He pointed out that they had so far not voted against the new Government.

The Communists immediately reacted by stating that they no longer regarded themselves as belonging to the majority. At the weekend, during the Fete de l'Humanité, they buried the Union of the Left, for good it seems.

By reverting to a hard opposition line, the Communists have resolved some of their short-term internal problems but not their fundamental difficulties. The move has certainly restored the influence, increasingly questioned, of the party leadership. It has also lifted the confusion within the CGT union. But it is by no means certain that it will ultimately help the party halt its steady electoral decline.

The hesitation in calling for

an all-out confrontation over the Government's economic and industrial policies appears to reflect the concern of the Communist leadership that the rank-and-file may not respond. In the Citroen labour dispute, the CGT has been remarkably cautious, and the car plants are all working relatively smoothly despite Citroen's controversial redundancies.

Most striking is the sense of fatigue in the working population towards the wave of industrial restructurings, ranging from the motor to the coal industries. This sentiment will inevitably weigh heavily against the Communist party's efforts to rally around itself what M Marchais called at the weekend "a great gathering of popular forces"—a sort of "union of the base" to replace the Union of the Left.

The current changes in the party's policies towards the new Government and its relationship in general with the Socialists are essentially an internal French affair. None the less it could also relate more broadly to the freer East-West relations.

The Soviet Union certainly favoured the departure of the Communists from the French Government. But perhaps it is only a coincidence that the French Communists have decided to sharpen their attack on the Socialists just as a number of East European political leaders are postponing visits to West Germany.

Bonn and steelmakers set to fight subsidy extension

BY OUR BONN CORRESPONDENT

THE BONN Government and the powerful West German steel industry yesterday signalled that they would tolerate no extension of national subsidies for EEC steelmakers beyond the agreed phase out date of end-1985.

The coincidence of the separate statements reflects the renewed suspicion here that some member governments, notably those of Italy and France, are pressing for the deadline to be extended, for fear of massive difficulties upon a return to freemarket conditions.

Herr Martin Bangemann, the West German Economics Minister, warned that any postponement could undermine the entire steel policy of the

Community. For its part, the country's iron and steel industry federation issued a "position paper" at the weekend whose essence is that if the 1985 date is not respected, then West German steelmakers will demand substantial direct assistance from Bonn to enable them to compete against subsidised producers elsewhere in the EEC.

According to figures here the industry, the largest in the Community, receives only DM 3bn (£790m) of aid annually. This compares with the sums equivalent to DM 30bn, DM 27.4bn and DM 20bn spent by Italy, Britain and France respectively on propping up their smaller industries in the seven and a half years to mid-1983.

Bank forecasts slower growth next year

By Our Nordic Correspondent

SWEDISH economic growth will slow again in 1985 after peaking this year, according to Svenska Handelsbanken, one of the country's leading banks.

The bank expects GNP growth to decline to 1.8 per cent compared with 3.1 per cent this year and 2.3 per cent in 1982.

The economy's strong recovery this year has been fuelled by booming exports, but latest reports from the Board of Commerce show them to have slowed considerably in the second quarter.

Swedish market shares fell from the admittedly abnormally high level of the first quarter. In May and June the rise in the value of imports exceeded the rise in exports for the first time in many months.

Mr Carl Johan Aberg, Under-Secretary at the Department of Trade, warned that the development in foreign trade was "disturbing." The recovery over the past year has made many people believe that the crisis is over, he said, but it is not.

The Handelsbanken forecasts that export growth next year will be much less than in 1984, partly because Swedish costs are rising more swiftly than in some of the country's main trading competitors, such as West Germany.

Sweden struggles to live with a pushy neighbour

BY KEVIN DONE, NORDIC CORRESPONDENT IN STOCKHOLM

SWEDEN'S Social Democratic Government is pressing ahead with attempts to "normalise" relations with the Soviet Union, despite its latest battle with Moscow over violations of its territory and in the face of deep rumblings of discontent from the non-Socialist opposition parties.

Last Friday the Government, with opposition backing, intensified its diplomatic protest over the Soviet Union's "serious" violation of Swedish air space last month.

On August 9 a Soviet fighter

broke away from an exercise over the Baltic and pursued a Swedish airliner carrying 270 passengers over the island of Gotland.

The intruder was in Swedish air space for nearly five minutes coming to within 2 kms of the airliner before turning away. Swedish fighters were scrambled from their base in the south but arrived too late.

Last week Moscow brushed aside Sweden's first mild oral protest, claiming that it could not "confirm" that it was a Soviet aircraft.

The incident and Stockholm's response highlights the tight-rope the Social Democratic administration is walking in trying to ease relations with Moscow while leaving no doubt about its commitment to defending its territory.

No Swedish cabinet minister has visited Moscow since a Soviet Whisky-class submarine ran aground in late 1981 close to Sweden's main naval base at Karlskrona. A year later, underwater craft, described as mini submarines, were said to have penetrated Swedish waters

close to Stockholm. Again the blame was placed firmly on the Soviet Union.

It is against this background that the Government and, in particular, Mr Olof Palme, the Prime Minister, have been trying to warm the chilly relations with Moscow. Mr Palme met Mr Andrei Gromyko, the Soviet Foreign Minister, in January at the beginning of the Stockholm Security Conference and has been at pains ever since to interpret positively Mr Gromyko's expressions of goodwill and his denial that Soviet

submarines have repeatedly penetrated Swedish waters.

Again on Friday, Mr Palme said the air violation could have been a mistake. Therefore the visit to Moscow next month by Mr Curt Boström, the Swedish Transport Minister, should go ahead.

Mr Anders Thunborg, the Defence Minister, dismissed the Soviet response, however. The latest issue of Jane's Fighting Ships, the British defence publication, claims that Soviet penetration of Swedish waters continues unabated.

Women queue longer for fewer goods in Poland

BY CHRISTOPHER BOBINSKI IN WARSAW

WOMEN HAVE been hit hardest by Poland's chronic day-to-day shortages leaving them with much less free time than men. This is one of the preliminary conclusions of a continuing survey this year by the Government's Central Statistical Office on how Poles spend their time.

Only Poland and Hungary in the Soviet bloc admit to carrying out this kind of survey and, what is more, publish the results. In this case these show male workers insulated to an extent from the effect of the

shortages in the shops which the authorities admit are the greatest single threat to political stability.

People are using over 20 per cent more time shopping each day than at the time of the last study in 1976. Women have 24 per cent less leisure time than men who admit to five and a half hours a day.

The average Polish woman spends five hours and 17 minutes away from the house on tasks connected with running the home; men spend just over two hours.

Before you can impress the world, you have to impress us. Before October 31st.

The Queen's Awards are presented annually to companies that have achieved outstanding success in exports or technology Or both.

The Awards are highly prized by industry and commerce, so half the satisfaction of winning one is in showing everyone you've won one.

As a winner you'll be entitled to fly the coveted Queen's Award flag and also to use the Award emblem on your products, letterhead and publicity material.

To apply your company can be of any size and involved in any type of business. The only condition is that it is based in the UK.

Entries must be in by 31st October 1984. For details, send the coupon to The Secretary, The Queen's Awards Office, Dean Bradley House, 52 Horseferry Road, London SW1P 2AG. Tel: 01-222 2277.

Application form for Queen's Awards 1985, including fields for Name, Company, Address, and checkboxes for Exports, Technology, and Both.

Swiss Bank Corporation:

When it's time to rethink your banking relationships.

"Sometimes it pays to be conservative." Michael Gabitass, Senior Vice President

In difficult times, basic virtues count—prudence, soundness, reliability and integrity. At Swiss Bank Corporation we have always understood this. That's why we don't mind being regarded as a bit conservative. But we do know the value of responding creatively to change, because innovation and flexibility are essential to long-term banking relationships. And being conservative, we tend to identify with our long-term customers. So as you rethink your banking relationships, think about having the key Swiss bank on your side.

Swiss Bank Corporation Schweizerischer Bankverein Société de Banque Suisse

The key Swiss bank

General Management in CH-4002 Basle, Aeschenschplatz 6, and in CH-8022 Zurich, Paradeplatz 6. Over 200 offices throughout Switzerland. Worldwide network (branches, subsidiaries and representatives): Europe: Edinburgh, London, Luxembourg, Madrid, Monte Carlo, Paris. North America: Atlanta, Calgary, Chicago, Houston, Los Angeles, Montreal, New York, San Francisco, Toronto, Vancouver. Latin America: Bogota, Buenos Aires, Caracas, Lima, Mexico, Panama, Rio de Janeiro, São Paulo. Caribbean: Grand Cayman, Nassau. Middle East: Bahrain, Cairo, Tehran. Africa: Johannesburg. Asia: Hong Kong, Singapore, Tokyo. Australia: Melbourne, Sydney.

ACROW PLC, for many years one of Britain's leading engineering firms, has gone into receivership. And as a consequence, many world renowned businesses which were operating under the Acrow plc umbrella are now available for purchase.

Set out below are outline details of the businesses together with the Joint Receivers who may be contacted at Cork Gully (address below) for further information:

COLES CRANES LIMITED

Coles Cranes, which celebrated its centenary in 1979, is Europe's leading manufacturer of mobile cranes. The major proportion of Coles' production is exported through the company's worldwide distributor network, which provides an uniquely comprehensive after-sales back-up. Allied to this is a valuable international parts and service operation.

The firm is based in Sunderland and Grantham with sites of 99 acres/850,000 sq.ft. of floor space and 10.5 acres/140,000 sq.ft. of floor space respectively. Year end March 1984 turnover was £64 million, and the firm employs 1400 people in the UK, France and Germany.

Coles' product range includes cranes ranging in size from 12 to 135 tonnes together with mobile access platforms. The firm includes a crane repair and renovating operation with facilities for up-dating all makes of mobile crane.

Joint Receivers: Michael A. Jordan · Paul F.M. Shewell

PRIESTMAN BROS. LIMITED

With over 100 years in the earth moving and construction equipment business, Priestman has a reputation for quality and reliability that is second to none.

The firm is based in Hull and had a year end March 1984 turnover of £15 million employing 340 people on a 63 acre freehold site that houses 350,000 sq.ft. of floor space.

Priestman Bros. manufacture hydraulic excavators, crawler-mounted cranes, grab-dredging cranes, pedestal cranes for off-shore oil platforms, hydraulic grabs and slewing rings. They also distribute mini-excavators.

During the last year the firm has successfully introduced the first variable counterweight long-reach excavator to the world marketplace.

Joint Receivers: Michael A. Jordan · J. Martin Iredale.

THOS. STOREY (ENGINEERS) LIMITED

In 30 years Thos. Storey has grown to become a world leader and the company's bridging and ferrying equipment is known in practically every country in the world.

Storey's success is based on four kinds of equipment. These are the Bailey Bridge, the Acrow Panel Bridge, its big brother, the Acrow Heavy Bridge, and the Uniflote flotation equipment.

Based in Stockport on a 12 acre site with 232,000 sq.ft. of floor space, the firm employs 314 people and recorded a year end March 1984 turnover of £12.5 million.

Joint Receivers: John D. Naylor · Cyril W. Nield

ACROW (ENGINEERS) LIMITED

For many decades Acrow Engineers have been leading specialists in the design, manufacture and hire of formwork, falsework and scaffolding for the building and civil engineering industries.

Based in Saffron Walden, Essex the firm has over 26 branch offices throughout the UK and Middle East producing a year end March 1984 turnover of £12 million. Currently the firm employs 560 people and in the UK has a 34.5 acre site with 400,000 sq.ft. of factory space. The site includes stores, offices, canteen, and sports ground along with undeveloped land and a galvanising plant.

The firm has a very strong UK new-product-development programme for worldwide use.

Joint Receivers: Michael A. Jordan · Christopher J. Hughes.

BENTALL SIMPLEX LIMITED

Bentall Simplex Ltd.

Bentall Simplex employs 182 people on an 11.25 acre site at Maldon, Essex with 226,000 sq.ft. of floor space. As the premier manufacturer of grain-storage equipment in Britain, the year end March 1984 turnover was £10.5 million. The order book stands at £1.5m and enquiry leads are high.

The range includes large silos, continuous flow-dryers, grain-drying and storage systems, elevators and conveyors. In addition, they manufacture feed processing factories for farmers worldwide and are continuously contracting to build complete installations for the drying, storage and handling of cereals, for the production of animal feed stuffs, and for the processing of coffee on plantations.

Joint Receivers: Gerry A. Weiss · John M. Thompson.

ACROW STORAGE EQUIPMENT LIMITED

Based in Harefield, Middlesex, Acrow Storage Equipment manufactures warehouse storage systems for all markets, but are particularly strong in warehouse and material handling systems for chain stores and other retail outlets.

In addition, its range covers front-of-store display units and all types of space-saving, static and mobile storage systems.

There exists a country-wide network of fully equipped installation teams, with a comprehensive after-sales and safety inspection service.

The firm's year end March 1984 turnover was £6.75 million and has 160 employees on a six acre site with 167,000 sq.ft. of floor space.

Joint Receivers: Gerry A. Weiss · John M. Thompson.

ADAMSON CONTAINERS LIMITED

Based in Stockport, Adamson Containers are the largest manufacturers of steel-clad freight containers in Europe, with a capacity of some 12,000 units per annum. Opened in 1978, a semi-automated factory accounts for over half of the 230,000 sq.ft. of floor space on the 14.2 acre site.

The firm's 207 employees build containers for all the world's major shipping and leasing companies, and manufacture special mini-containers for off-shore oil operations and defence industries.

Accommodation units, site security units and steel pallets also contributed to the firm's year end March 1984 turnover of £5.6 million.

Joint Receivers: John D. Naylor · Cyril W. Nield.

STEELS ENGINEERING LIMITED

Steels Engineering are pipework manufacturing and contracting engineers to industry offering the highest technical skills in design, manufacturing and site-engineering.

Based in Sunderland, the firm employs 145 people on a 12 acre site with 11,300 sq.ft. of office floor space, and recorded a year end March 1984 turnover of £4 million.

Major clients include, British Nuclear Fuels, Paper Manufacturers, and Power Stations throughout the world. The firm's Marine Division specialises in piping systems for many of the world's ship-owners and ship-builders.

Joint Receivers: J. Martin Iredale · Trevor C. Middleton.

ACROW CRANE & HOIST LIMITED

Employing 18 people with a year end March 1984 turnover of £750,000 the firm is based in Stockport and manufactures high-technology hoists and cranes with or without explosion-proof protection.

The firm also refurbishes overhead electric travelling cranes.

Joint Receivers: John D. Naylor · Cyril W. Nield.

CRAWLEY (REFRIGERATION) LIMITED

Based in Saffron Walden, Essex, the firm manufactures water coolers, chilled beverage dispensers, mobile refrigeration units and mobile water-purification units.

Crawley has the major share of the drinking water cooler market in the UK and had a year end March 1984 turnover of £670,000 employing fourteen people.

Joint Receivers: John D. Naylor · Christopher J. Hughes.

All enquiries concerning any of the above businesses should be made to the Joint Receivers concerned at: Cork Gully, Shelley House, 3 Noble Street, London EC2V 7DQ. Telephone: 01-606 7700. Telex: 884730. Gully C&L

OVERSEAS NEWS

Rama Rao returns home with followers to curfew

BY JOHN ELLIOT IN HYDERABAD

MR N T Rama Rao, former film star and deposed Chief Minister of the Indian State of Andhra Pradesh, returned yesterday to his state capital of Hyderabad hidden in an old van, leading more than 100 of his political followers in coaches through deserted streets.

The procession, guarded by 10 police jeeps and cars, was robbed of a huge reception by a curfew imposed after the city's worst communal riots for about 30 years - dozens of shops were destroyed and several people lost their lives on Sunday.

Only a few people - including some groups of troops - waved as the convoy travelled through the city. Because Mr Rama Rao had no mass audience he stayed shut in his van.

Mr Rama Rao and his followers - members of the state legislature who have been in voluntary exile from Andhra Pradesh for three weeks - returned to attend a meeting of the state assembly scheduled for this morning to decide whether he or the state's new Chief Minister, Mr Bhaskara Rao, should be in power.

Yesterday the political camps blazed each other for inflaming the Hindu Moslem riots on Sunday in order to force the introduction of a curfew - and even possibly the introduction of President's rule from New Delhi - in order to stop today's assembly meeting from taking place.

Hindu-Moslem clashes are common in the ancient city of Hyderabad where both communities are strong. Often the riots are exploited by political activists.

On Sunday a usually colourful and impressive procession celebrating the festival of the elephant god Ganesh became the vehicle from which Hindu extremists launched attacks on Moslem shops, hotels and restaurants along the procession route.

For the first time in 30 years, according to residents, the attack took place in the modern shopping centre of the city as well as in the old city where they are usually confined.

Yesterday as troops swung lathis - (long bamboo truncheons) playing children and stray cattle nosed through rubbish in broken shop fronts - Moslem shopkeepers clambered through broken glass and furniture as they entered the sometimes still smouldering ruins of their shops. They estimated damage at tens of thousands of dollars.

Last night the curfew was relaxed in some areas but political tension rose as Mr M K Wali, secretary of the Home Ministry in New Delhi, flew in for urgent talks so underlining the direct role of Mrs Indira Gandhi, Prime Minister, in the affair.

The speaker of the state parliament - political agent to Mrs Gandhi in the last election in an Andhra Pradesh constituency - refused to meet Mr Rama Rao and other political opposition leaders to discuss arrangements for today's meeting.

The problem for Mrs Gandhi - who wants Mr Rama Rao out of power in the run up to India's general election - is that the former film actor appears still to have a majority of 163 in the 294 seat assembly.

His supporters spent the last three weeks visiting New Delhi and then touring the neighbouring state of Karnataka.

They have been avoiding pressure from their opponents to switch sides. Induced by substantial gifts and other bribes 10 to 20 of them are thought to be vulnerable if they came under pressure.

Opec crude output 'falls sharply'

Crude oil output by members of the Organisation of Petroleum Exporting Countries (Opec) fell sharply in August, the Middle East Economic Survey said yesterday. Reuter reports from Nicosia.

Output was estimated at roughly 16.4m barrels a day (bpd) in August - 1.1m bpd below Opec's self-imposed production ceiling, compared with 17.5m bpd in July, the survey added.

Estimated output was only slightly over the projected 16.2m bpd of Opec crude needed to keep non-Communist consumption in the third quarter, it said.

Iraqi naval attack

Iraqi war aircraft have attacked a "large naval target" south of Baghdad to refer in an oil tanker. There was no immediate independent confirmation of the Iraqi attack.

The statement, from a military spokesman, did not identify the target. The term "large naval target" is often used by Baghdad to refer in an oil tanker. There was no immediate independent confirmation of the Iraqi attack.

Tanaka backs Nakasone to stay on as PM

BY JUREK MARTIN IN TOKYO

MR KAKUEI TANAKA, Japan's former Prime Minister and still its principal political kingmaker, yesterday as good as endorsed at least another year in office for the present incumbent, Mr Yasuhiro Nakasone.

Mr Tanaka, who rarely speaks in public these days, told a meeting of young members of his political faction that the current two-year term of the presidency of the ruling Liberal Democratic Party, which in effect carries with it the Prime Ministership, was too short and should be extended to three years.

In November, the LDP is to select its next leader. Mr Nakasone is generally considered to be the favourite, mainly because it is assumed that he has Mr Tanaka's tacit backing.

But this has not prevented backstage manoeuvring by his potential rivals, including approaches to Mr Tanaka, and questions have even been raised about the solidity of Mr Tanaka's support for Mr Nakasone.

His statement can be expected to pre-empt at least some of this speculation. The general interpretation in Tokyo last night was that in choosing to speak about party president's term, Mr Tanaka was coming as close to an outright endorsement of Mr Nakasone as he is ever likely to do.

He said the current two-year term had only been "temporarily" imposed eight years ago as a way of defusing the factional intra-party rivalry especially rife at the time.

It should be overturned, he suggested, by a vote of two-thirds of the LDP MPs and replaced with a three-year term that allowed for the possibility of a president serving two consecutive terms.

He did not, however, state when he thought such a change should be put in effect and this, in turn, could be a message for Mr Nakasone.

It is not thought Mr Tanaka is so enamoured of the Prime Minister as to give him a minimum of five years in power (the two he has already served, plus three more).

Thus, he may be suggesting, indirectly, that the price of his support for Mr Nakasone in November is that the Prime Minister agree to step aside after another year, by which time he would have served three years - after which the three-year regime could take effect.

Such a plan might have broad appeal inside the party at large, because the LDP traditionally shares out the political spoils.

It has its generation of so-called "new leaders" - Mr Shintaro Abe, Mr Kiichi Miyazawa, Mr Noburo Takeshita and others - who, it is felt, should not be kept waiting too long.

Their patrons, factional elders such as Mr Zenko Suzuki and Mr Takeo Fukuda, both former Prime Ministers, have even been canvassing for someone to run against Mr Nakasone now.

Such an alternative candidate would have to be acceptable to Mr Tanaka and would agree to serve as a caretaker president for perhaps only a year. He has not yet, however, been found.

Mr Kakuei Tanaka (top) and Mr Yasuhiro Nakasone

Philippines, IMF progress

BY EMILIA TAGAZA IN MANILA

THE PHILIPPINES has ended almost 11 months of talks with the International Monetary Fund (IMF), with the Government confident that a \$DR \$15m (\$370m) standby credit will be approved this month.

Mr Jose Fernandez, the Central Bank Governor, yesterday said that the most recent IMF mission extended its stay in Manila to study more extensively all the elements of the economic programmes and targets set by the Government.

"We have discussed and resolved all major issues and I hope that no major issues arise before the approval," Mr Fernandez said. The IMF mission left last week.

Mr Fernandez told a news conference last month that he expected IMF approval within 30 days. Yesterday, he said that, "if I were optimistic at that time, I am even more optimistic today."

The Governor added that after the letter of intent is approved, simultaneous negotiations will be conducted with the country's commercial creditors and with the official creditors under the Paris Club for the rescheduling of some of the country's \$25bn debt.

Philippine negotiations with the IMF had been stalled because of the Government's failure to meet some of the conditions attached to the credit, including controls in money supply and domestic liquidity, and a flexible peso exchange rate.

Government sources said the last hitch is the multiple exchange rate system in effect in Manila. The IMF considers a multiple exchange rate system a form of foreign exchange control.

The Philippine military refused to comment yesterday on a newspaper report linking it to the murder last year of opposition leader Benigno Aquino, reports Reuter from Manila.

A San Francisco newspaper had quoted a member of an official Commission investigating the murder as saying: "The military is involved, no question."

According to the San Francisco Examiner, panel member Dante Santos said: "You don't have to sit down for 10 months to know that."

Mr Aquino was shot dead at Manila airport on August 21 last year. The military, which provided escorts on his arrival from the U.S. said he was killed by an alleged Communist agent, Mr Rolando Galman.

Guerrilla base raided

Israeli jets have raided a Palestinian guerrilla base near the central Lebanese town of Bhandoun, an Israeli army spokesman said yesterday.

The aircraft had hit a base of the Democratic Front for the Liberation of Palestine, destroying a three-storey building, the spokesman added. All the Israeli aircraft had returned safely, the army added.

Youths stone school

Youths stoned a school and two delivery vans in Johannesburg's Black township of Soweto yesterday in continuing unrest which has claimed about 40 lives in the past fortnight, police told Reuter in Johannesburg.

The police did not intervene and the youths dispersed after plundering a lorry. Meanwhile, police with fresh detention orders were hunting for seven opposition leaders freed from prison by a judge.

South Korean deficit revised upwards

By Ann Charters in Seoul SOUTH KOREA'S current account deficit on the balance of payments is likely to reach \$1.5bn (\$1.15bn) by the end of the year - up significantly from the \$1bn anticipated earlier.

The South Korea Development Institute, a government-funded economic "think tank," in revising the forecast, attributes the change to higher-than-expected imports in the first six months of this year and a deterioration in the invisible trade account expected in the latter half.

Higher international interest rates have increased South Korea's debt service payments and the continued fall in overseas construction payments is expected to result in a \$150m deficit for invisibles and net transfers for the year.

Gross National Product growth rate for 1984 is projected at 8.1 per cent, compared to 9.5 per cent in real terms for last year.

Ethiopia congress approves 10-year economic plan

NAIROBI—The congress of Ethiopia's ruling Marxist-Leninist Party has approved a 10-year economic plan that would provide a "springboard for the construction of a Socialist society" while forging closer links with the Soviet bloc, the state radio said.

"With regard to our foreign economic relations, the guideline indicates that we shall further extend and consolidate our relations with the Socialist world and henceforth give our serious attention to the building of a strong and independent Socialist economy," it quoted the report as saying.

Priority will be given to agriculture, although its development will be inter-related with that of industry in the impoverished Horn of Africa country, according to the Ethiopian broadcast monitored here.

The guideline was based on Ethiopia's experiences in regulating the economy in a "planned manner" in recent years and on the experiences of "fraternal countries," it said, using the description normally employed for members of the Soviet bloc.

The plan stated that it was necessary to raise food production by expanding state farms and organising farmers into co-operatives to ensure self-sufficiency and an "emergency surplus."

Ethiopia is one of the drought-hit countries in Africa, and the recipient of food and shipments from the West, including the U.S., despite ideological differences.

More than 5m Ethiopians are affected by the shortages, according to a recent United Nations report.

The first legal political party in Ethiopia's history was inaugurated yesterday when the congress set up the Marxist-Leninist Workers Party in Ethiopia (WPE). Agencies

China arrests four over '1967 massacre'

By Mark Baker in Peking

CHINA has arrested four people it claims were responsible for massacres during the Cultural Revolution in which more than 112 people were killed.

The four - reported to have led two separate rebel gangs in Southern China - are believed to be the first people arrested in several years for alleged Cultural Revolution crimes.

The official Chinese Press has reported during the past few days the arrest of three people in Canton and another in Chongqing who are claimed to have been hiding their identities since the Cultural Revolution.

The Canton three, a woman, Wang Yawen, and two men, Zhao Mushu and Huang Niangzhou, were arrested for "planning and directing" a massacre in which party officials and peasants were rounded up and executed in a mountain area of Haifeng County, east of Canton, in late 1967.

It's a direct S.W.I.F.T. link for account inquiries and adjustments. Through this direct S.W.I.F.T. link, your requests are handled quickly and efficiently. If additional assistance is needed, our representatives are on-the-spot in London to give you personal attention.

It's automated clearing in New York. When you send messages to us electronically, your U.S. dollar payments are processed by Manufacturers Hanover and sent to the U.S. payments system with no manual intervention, virtually error-free.

It's timely cash flow information. Our on-line reporting capability ensures that you have up-to-the-minute transaction details on your account with us in New York.

THE FINANCIAL SOURCE

It's the most advanced telecommunications capabilities available today. We offer state-of-the-art S.W.I.F.T. capabilities, in addition to our sophisticated private telecommunications system, ensuring utmost speed and accuracy in transaction processing, account inquiries and information retrieval.

It's Manufacturers Hanover, clearing bank to the world. Quality. Loyalty. Consistency. These three attributes make Manufacturers Hanover a dedicated banking partner. We are committed to providing you with high quality banking services and products—in a timely, accurate way. But more important is the way we provide these services. We strive, always, for a consistency that you can count on. And a loyalty you will find exceedingly difficult to match.

AMERICAN NEWS

Debt crisis 'is being rapidly resolved'

WASHINGTON - Despite considerable recent concern to the contrary, the international debt crisis is being resolved more rapidly than anticipated, a new study concludes.

According to Mr William Cline, a Senior Fellow at the Institute for International Economics (IIE), a Washington-based think tank, commercial banks could resume lending to Mexico and Brazil on a voluntary basis as early as 1986-87, but restoration of Argentina's creditworthiness is likely to take longer.

Alarm over rising dollar interest rates, over Argentina's failure to reach agreement with the International Monetary Fund (IMF) and over the possibility of a new banking crisis following the collapse of Continental Illinois have all tended to mask a remarkable improvement in the balance of payments positions of many major debtor nations, Mr Cline says.

Will Nestlé bring its condensed milk to the supermarket? Terry Dodsworth reports Hopes raised for sweet-toothed Americans

THERE IS a small, totally unimportant, but highly fanatical group of consumers for whom the proposed Nestlé acquisition of Carnation, the U.S. processed foods company, raises only one significant issue. Will it make Nestlé's condensed milk available in the U.S. market?

Nestlé is a leading producer of tinned condensed milk in Western Europe, where it wins high marks from the cognoscenti for its particular blend of the syrupy nectar. Yet its cans are woefully absent from U.S. supermarket shelves.

Oddly, at least to a European, Carnation's own, equally goopy brand is also inexplicably missing in America. Carnation makes what its annual report calls a "sweetened" condensed milk in the UK, Italy, Australia, Malaysia, Nigeria, Peru, Singapore and South Africa. But in North America it has opted out of the market, sticking to its canned evaporated milk, the unsweetened variety of the tinned product.

AP-DJ

Will Nestlé sell its condensed milk in the U.S. if it acquires Carnation? A small group of devotees of the canned confection fervently hopes so. The product, an American invention of more than 100 years ago, formed the foundation of what looks set to become the world's largest processed food company.

never openly admit it. This one of Carnation's principal competitors in evaporated milk until a few years ago was Borden, a 127-year-old New York company, whose foundation predates its West Coast rival's by almost half a century. But Borden threw in the towel on evaporated products in the 1960s, concentrating its efforts on the condensed variety. If that move reduced competition, it is at least reflected in the historical base of both companies. Carnation was built on the technology of evaporation, which removes water from

make it into the largest processed food company in the world. Mr Gall Borden, the founder of Borden, was himself a remarkable character, a true rolling stone who tried his hand with a fair degree of success at a variety of occupations, including journalism, before hitting it big with condensed milk. The story goes that he saw the need for condensed milk when sailing back across the Atlantic after being awarded a gold medal by Queen Victoria for the invention of a dehydrated biscuit. The problems of children drinking con-

taminated milk on board ship prompted his search for a way of condensing and preserving the product. He patented his discovery in 1857, had his company rolling by the time the Civil War came along, and cleaned up financially supplying the Union front lines.

Mr Borden's love of the product which made his fortune would strike a chord with any of the sweet-toothed fanatics who stock up their fridges with the stuff (it is better taken cold, like an Alsatian wine). While still a working executive at the company, he had a tombstone carved out in the shape of a condensed milk can and placed on his chosen burial site. Sadly, the mock can was removed after his death, but Borden lives on as a diversified food and chemicals company, running up sales of \$4.3bn last year. It also appears to have a virtual monopoly of the U.S. condensed milk market, mainly through two brands, Eagle (the original) and Magnolia.

Borden says that these, along with its other milk products—fresh milk, powdered milk, ice cream and so on—account for about two thirds of its sales. Condensed milk, almost 130 years after its birth, also remains the group's second best profit spinner. Borden made a total of \$160.4m profits after tax last year, so there must be some sizeable margins tied up in these little

Bank Bills face crucial tests in Congress

By Paul Taylor in New York

THE U.S. Senate was due yesterday to resume discussion of an Administration-backed Bill which would allow banks to further expand into the financial services industry.

Separately the House of Representatives is continuing discussion a key Bill which would shore-up the sagging 50-year-old barriers between the banking and securities industry.

The two Bills, both of which face crucial tests this week, seem amid a fierce lobbying campaign by powerful proponents and opponents within the financial services industry. They also reflect a widening debate, spurred by concern about the health of the U.S. banking system, about whether the process of banking deregulation should be accelerated or reversed.

Both Bills would close certain loopholes in U.S. banking law. In particular they would seek to block non-banking companies such as Merrill Lynch, the leading Wall Street firm, from offering banking services. But the House Bill, proposed by Rep Ferdinand S Germaine, goes considerably further in the restrictions it would impose.

One provision would extend the Glass-Steagall Act, which attempts to separate commercial banking from the securities industry, to thrift institutions. If passed, the Bill could force several no-bank companies such as Sears Roebuck, the Chicago retailing group, which owns a 92-branch California savings and loan association and Dean Witter Reynolds, the Wall Street firm, to divest at least one of these businesses.

In contrast Senator Jake Garn's Bill, which has already been the subject of a lengthy filibuster debate on the Senate floor spearheaded by opponents of a provision which would officially endorse regional inter-state banking networks, would greatly expand banking powers. In particular it would formally allow banks to underwrite mortgage based securities and municipal bonds.

GM plans offer to union on job security

By Terry Dodsworth in New York

NEGOTIATIONS over a three-year wages contract in the U.S. motor industry moved into higher gear yesterday when General Motors said that it was planning a response to the United Auto Workers' demands for job security improvements.

GM, selected last week as the industry's bargaining opponent and strike target, gave no details of its proposals, but the initiative answers recent criticism that the company was failing to make any more towards substantive negotiations.

Mr Owen Bieber, the UAW president, said at the weekend that the company had not given the union any opportunity to start meaningful bargaining.

Anxieties over GM's position have been mounting recently because the two sides have only this week to reach a settlement before running into the strike deadline at midnight on Friday.

The issue of job security is widely regarded as the key to reaching an agreement. GM has been particularly aggressive over the past two years in its moves to buy more parts and built-up cars from outside the U.S., thus reducing the number of jobs. The union has taken issue with the GM policy after being hit by substantial job cuts caused by the recession in the industry which ended last year. Although the number of jobs has increased again over the last 12 months, there is no likelihood that they will approach pre-recession levels again.

In its original demands, the UAW asked for the industry to create non-auto jobs to replace work lost in the industry, some arrangement with suppliers for preferential treatment for laid-off car workers, and the expansion of the present pilot programme on guaranteed employment. It is widely felt that if the management moves some way towards accepting these proposals it will be able to achieve a moderate agreement on pay.

Now offers 12.75% p.a.

The National Savings Deposit Bond interest rate has now been raised to 12.75% p.a. Unlike many other investments, no tax is deducted at source - this high interest is credited in full. It means your bonds earn more money. If you are a taxpayer you pay the tax when it falls due. If you don't pay tax, the money is all yours.

Minimum now £250.

The bonds can be bought in multiples of £50, with a new minimum investment of £250, and a maximum holding of £50,000.

You can have all or part of your bond repaid at 3 months notice. By keeping your bond for just one year, you earn full interest.

Even if you need to withdraw your money within the first year, you'll still earn interest at half the published rate.

Daily interest

Interest is calculated on a daily basis, and is credited in full on the anniversary of your deposit.

From time to time the interest may vary, but you'll always get six weeks notice of any change and the rate will be kept competitive.

How to buy

Almost anyone can invest in Deposit Bonds - personal investors, including children and two or more people jointly, and trustees, companies, clubs, voluntary bodies, etc.

As a personal investor, you can buy in two ways. You can send the application form below direct to the Deposit Bond Office - make out your cheque (not cash) to 'National Savings'.

Or you can ask for a combined prospectus/application form at a Post Office and make your deposit there. If you pay by cheque, make it out to 'The Post Office'.

Trustees, companies, voluntary bodies, etc, should use the application form below.

Interest will be earned from the day you buy your bond at the Post Office or, if you use the application form below, the day your deposit is received at the Deposit Bond Office.

Buy Deposit Bonds now. It means more money.

IT MEANS MORE MONEY.

DEPOSIT BOND

NATIONAL SAVINGS

DESCRIPTION
1 National Savings Deposit Bonds (hereafter referred to as 'bonds') are Government securities issued by the Treasury under the National Loans Act 1968. They are registered on the National Savings Stock Register and are subject to the Statutory Regulations relating to the National Savings Stock Register for the time being in force so far as they are applicable. The principal of, and interest on, bonds are a charge on the National Loans Fund.

PURCHASE
2 1 Subject to a minimum purchase of £250 (see paragraph 3) a purchase may be made in multiples of £50. The date of purchase will for all purposes be the date payment is received with a completed application form at the National Savings Deposit Bond Office or Post Office (see paragraph 4) or at the National Savings Bank, or such other place as the Director of Savings may specify.

2.2 A certificate will be issued on receipt of each purchase. This certificate will show the value of the bond and the date of purchase. This certificate will be replaced on each anniversary of the date of purchase and on part repayment in accordance with paragraph 5.2, by a new certificate showing the updated value of the bond, including capitalised interest.

MAXIMUM AND MINIMUM HOLDING LIMITS
3 1 No person may hold, either solely or jointly with any other person, less than £250 in any one bond or more than £50,000 in one or more bonds. The maximum holding limit will not prevent the capitalisation of interest under paragraph 4.3 but capitalised interest will count towards this limit if the holder wishes to purchase another bond. Bonds inherited from a deceased holder and interest on such bonds will not count towards the maximum limit. Bonds held by a person as trustee will not count towards the maximum which he may hold as trustee of a separate fund or which he or the beneficiary may hold in a personal capacity.

3.2 The Treasury may vary the maximum and minimum holding limits and the minimum annual purchase from time to time upon giving notice, but such a variation will not prejudice any right enjoyed by a bond holder immediately before the variation in respect of a bond then held by him.

INTEREST
4 1 Interest will be calculated on a day to day basis from the date of purchase up to the date of redemption. Subject to paragraph 4.2 interest on a bond will be payable at a rate determined by the Treasury, which may be varied upon giving six weeks notice.

4.2 The rate of interest on a bond or part of a bond repaid before the first anniversary of the date of purchase will be half the rate determined by the Treasury, in accordance with paragraph 4.1, unless repayment is made on the death of the sole bond holder.

4.3 Interest on a bond will be capitalised on each anniversary of the date of purchase without deduction of income tax, but interest is subject to income

tax and must be included in the return of income made to the Inland Revenue in respect of the year in which it is capitalised.

REPAYMENT
5 1 A holder must give three calendar months notice of any application for repayment before redemption but no prior notice is required if application is made on the death of the sole bond holder. Any application for repayment of a bond must be made in writing to the National Savings Deposit Bond Office and be accompanied by the current investment certificate. The period of notice will be calculated from the date on which the application is received in the National Savings Deposit Bond Office.

5.2 Application may be made in accordance with paragraph 5.1 for repayment of part of a bond, including capitalised interest, but the amount to be repaid must not be less than £50 or such other figure as the Treasury may determine from time to time upon giving notice. The balance of the bond remaining after repayment, excluding interest which has not been capitalised, must be not less than the minimum holding limit which was in force at the date of application. Where part of a bond has been repaid a new certificate will be issued and the remaining balance will be treated as having the same date of purchase as the original bond.

5.3 Payments will be made by crossed warrant sent by post. For the purpose of determining the amount payable in respect of a bond the date of repayment will be treated as the date on the warrant.

5.4 No payment will be made in respect of a bond held by a minor under the age of seven years, either solely or jointly with any other person, except with the consent of the Director of Savings.

TRANSFERS
6 Bonds will not be transferable except with the consent of the Director of Savings. The Director of Savings will, for example, normally give consent in the case of death of a bond holder on the death of a holder but not in any proposed transfer which is by way of sale or for any consideration.

NOTICE
7 The Treasury will give any notice required under paragraph 3.2, 4.1 and 4.2 and 8 in the London, Edinburgh and Belfast Gazettes or in any manner which they think fit. It notice is given otherwise than in the Gazettes, it will as soon as reasonably possible thereafter be recorded in period.

GUARANTEED LIFE OF BONDS
8 Each bond may be held for a guaranteed initial period of 10 years from the purchase date. Thereafter interest will continue to be payable in accordance with paragraphs 4.1 and 4.3 until the redemption of the bond. The bond may be redeemed either at the end of the guaranteed initial period or on any date thereafter, in either case upon the giving of six months notice by the Treasury. The Director of Savings will write to the holder before redemption, at his last recorded address, informing him of the date of redemption.

NATIONAL SAVINGS DEPOSIT BOND - Application to purchase
To the Deposit Bond Office, Dept. FT 9, National Savings, Glasgow G9 9BL

I/We accept the terms of the Prospectus and apply for a Bond to the value of £ _____

(Note: Minimum purchase is £250. Maximum holding £50,000. All purchases must be in multiples of £50.)

BLACK CAPITALS PLEASE

Surname(s) _____ First name(s) _____ M/Ms/Ms

Address _____

Postcode _____

Note: If the bond is to be held jointly the names and addresses of all holders should be entered. The Investment Certificate and all correspondence will normally be sent to the first named holder (under 7 year olds).

NAME AND ADDRESS TO WHICH DEPOSIT BOND SHOULD BE SENT
(Complete only if different from box address above)

Name _____

Address _____

Postcode _____

Signature _____ Date _____

Note: If the bond is to be held jointly all the parties must sign above. Persons applying for children under 7 should also state relationship here.

Latin Americans to call for debt summit

BY JIMMY BURNS IN BUENOS AIRES

A RENEWED call for a summit of Western and Third World nations to look at ways of tackling debt problems is expected to be the main initiative of a regional meeting this week in the Argentine seaside resort of Mar del Plata.

Following preparatory meetings today and tomorrow, foreign and finance ministers from 11 Latin American countries will gather on Thursday and Friday to consolidate the common front set up at the Cartagena meeting of these nations in June. The talks take place in advance of the annual meeting of the International Monetary Fund in Washington on September 25.

Argentina wants to delay bridging loan repayment

BY PETER MONTAGNON, EUROMARKETS CORRESPONDENT

ARGENTINA IS to ask its commercial bank creditors today to extend the deadline for repayment of \$750m (£590m) due on a \$1.1bn bridging loan assembled by the banks last year. The request will be put before a meeting of leading creditor banks in New York and although the banks are widely aware of Argentina's desire for a fresh payments delay, it was uncertain last night how the committee of leading creditors will react. The talks may last several days.

W. Germans join outcry over U.S. textile curbs

By JOHN DAVIES IN FRANKFURT

WEST GERMANY'S textile manufacturers have joined the chorus of protest against stringent new U.S. curbs on textile imports.

They are concerned that their comparatively modest volume of textile exports to the U.S. will be hit by tighter U.S. rules about the origin of materials used in textile goods. They are also alarmed at the prospect of spending more time filling in forms and of disclosing business secrets about the source and value of materials used.

Herr Ernst-Guenther Plutte, president of Gesamttextil, the industry association, yesterday called on Herr Martin Bange-mann, the federal economics minister, to use his influence to tone down the U.S. measures.

Although developing countries have been strongest in their criticism of the U.S. curbs, other industrial countries have also been reacting uneasily. The textile moves could further irritate Bonn, which has already been ruffled by U.S. measures to monitor and curb high-technology exports to Eastern Europe.

The U.S. claims that the new "country of origin" rules are aimed at halting evasion of U.S.

Banks wary of Sudan oil project

By Christian Tyler, Trade Editor

THE FINANCING of a big oil pipeline project in the Sudan is still not in place nearly a year after the contract was awarded.

According to the International Finance Corporation, the World Bank affiliate which has a small equity stake in the project, there are "strong indications of bank support," but no commitment yet.

A group of about eight banks led by Arab Petroleum Investments Corporation (Apicorp) was supposed to be providing \$250m over seven and a half or eight years. The IFC was to provide \$50m and the Overseas Private Investment Corporation of the U.S. another \$50m.

Barter 'against developing nations' interest

By ANDREW GOWERS

RIGID countertrade policies—requiring that exporters to a country buy a set amount of goods from it in return—are not in any developing nation's long-term interests, according to a report just published by the Economist Intelligence Unit.

Referring to Indonesia, which since 1982 has required that companies doing business with it engage in countertrade, it says there is a danger that other developing countries may follow suit, which could result in a dramatic escalation in the volume of trade conducted on a barter basis and a consequent disruption of commodity markets.

The report, produced by Mr Stephen Jones of consultants Produce Studies, takes a particularly critical view of countertrade involving surplus bulk commodities such as oil, coffee and rubber. This is the most frequent type of countertrade and that preferred by Western companies.

In most cases, the study argues, a country is probably further harming its markets by attempting to offload through countertrade surplus commodities which it could not sell by conventional methods.

"In practice, the countertrading of bulk commodities usually means either that the

developing country displaces its own commercial exports or that it is trying to steal market share away from a competitor in a finite market"—which may result, it says, in a free-for-all.

Countertrade using manufactured or processed products, while possibly of more value to developing countries, is extremely difficult to conduct, the study points out.

Potential problems include the difficulty of mustering sufficient supplies, poor quality, uncompetitive prices and import barriers in the West.

The report suggests that developing countries may find

China brings in soft loans for imports

PEKING—The Bank of China (BOC) and the China Industrial and Commercial Bank (CICB) have started new soft loan facilities for Chinese borrowers, a move aimed at speeding up technology imports, China Economic News said.

BOC has allocated \$400m this year for an import financing scheme for technical transformation of existing enterprises importing foreign equipment, while CICB is issuing mixed foreign exchange and Chinese currency loans for the same purpose, it said.

Both schemes provide for borrowers from 14 coastal cities open to foreign investment and business, it said.

BOC loans carry a 4 per cent annual interest with three to five year maturities, the journal said.

The borrower repays in foreign exchange if it is a foreign exchange earner, otherwise it can repay in Chinese currency.

BOC subsidises the shortfall from normal loan rates. Chinese rates differ with the kind of loan but a BOC spokesman said for provision of floating funds to factories is 7.5 per cent.

The CICB scheme covers an initial total equivalent to yuan 1bn (£15m).

Fluor studying expansion of Saudi pipeline

By RICHARD JOHNS

FLUOR, the U.S. engineering company, is understood to be doing a preliminary study on behalf of the Arabian American Oil Company on an expansion in the capacity of the Saudi crude oil pipeline from the Eastern Province to the Red Sea.

An increase in capacity could be needed to accommodate Iraqi oil when the link with its southern fields, with a throughput of 500,000-600,000 b/d, is completed in two years or so.

Fluor declined to comment on the work but it is thought to be looking at the possibility of "looping" the pipeline in Yanbu which has a current capacity of 1.85m b/d with the aim of raising it to 2.45m b/d.

Recently throughput is said to have been running at about 1.3m b/d including only about 500,000 b/d of exports, despite higher insurance and freight rates for shipping in the Gulf.

An extra 25 cents per

barrel over and above official selling prices is charged for the oil pumped through the facility. It also serves the export refinery owned by Petroleum and Shell which came on stream last month, as well as plants at Riyadh, Yamm and Jeddah geared to satisfying local demand.

Iraq is expected to announce soon contracts for the 680-kilometer-long link from near Zubair to pump station PS3 on the Saudi pipeline. Brown and Root,

another U.S. company, has the contract for engineering and construction management for the project designed to give Iraq another outlet for its oil exports in addition to the one via pipeline to Turkey's south-east Mediterranean coast.

Later an independent pipeline from southern Iraq to the Red Sea, where a separate terminal would be built, is envisaged. The cost of both phases has been put at \$2.5bn.

Patrick Blum reports on Vienna's objections to tighter restrictions on transit and bulk distribution trade

Why Austria resists Washington's high-tech controls

AUSTRIA will resist pressures from the U.S. to adopt U.S.-inspired controls over technology transfers to the Warsaw Pact countries and will refuse to sign any formal agreement to that effect. Austrian officials argue that any such agreement would give the U.S. legal rights over transactions in Austria, unacceptable given the nation's status as an independent neutral state.

Austria's unwillingness to comply with U.S. demands reflects its reluctance to be drawn too closely into the political conflict between East and West or to be seen to side openly with either major power bloc.

Austria's geographical position, sharing borders with several East European states with which it has long and close links, marks it out from other neutral countries. Direct access to Eastern Europe is easy and difficult to control. Transit trade is also a source of considerable earnings for Austria.

The U.S. is hoping for a clear commitment from the Austrians that they will be taking firm action to ensure western technology is not transferred through Austria to the East bloc. Austria sees current talks with the U.S. as an exercise in stating its position, not as negotiations on changing it.

A U.S. official in Vienna said: "If Austria wants to develop an autonomous system, that's fine. We're just looking for some sort of systematic control. We would be happy to have a formal agreement, but in the end it's the results that count."

Austria is not a member of the Paris-based Co-ordinating Committee, which monitors and rules on high-tech shipments to strategically dubious nations. Members are Nato countries, except Iceland, the U.S., and Japan.

Dowty explains Brazil delay

THE DOWTY GROUP, a leading British maker of mining equipment, said delays in carrying out its \$21m contract with a Brazilian mining company were due to squabbling over the location of the local manufacturing content, says Rodger reports.

Under the contract, awarded in April, Dowty would supply long wall mining faces for a major new coal mine for CBM,

the Rio Grande do Sul state-owned mining company.

Dowty said it had planned to carry out the bulk of the local manufacturing—mainly of steel roof and floor beams—in Sao Paulo state. Now there were political pressures for more of the work to be done in Rio Grande do Sul state. The dispute between the two states was currently being resolved.

Air Liquide wins contracts

PARIS—Major French gas producer Air Liquide said it had won two contracts in South Africa and South Korea worth a total of FF 415m (£36m).

The South African contract, worth FF 250m, has been concluded with Sasol to provide an oxygen plant.

The plant, at Secunda, will

have a production capacity of 2,500 tonnes a day.

The South Korean contract is with the state-owned Pohang Iron and Steel for the delivery of two air separation units, each with a production capacity of 450 tonnes of oxygen a day.

A U.S. official in Vienna said: "If Austria wants to develop an autonomous system, that's fine. We're just looking for some sort of systematic control. We would be happy to have a formal agreement, but in the end it's the results that count."

Austria is not a member of the Paris-based Co-ordinating

Committee, which monitors and rules on high-tech shipments to strategically dubious nations. Members are Nato countries, except Iceland, the U.S., and Japan.

The Austrians are adamant they will not sign a formal agreement. "We have never signed such an agreement and we would refuse to sign one," says Herr Ferdinand Lachna, minister for transport and the nationalised industries. He says Austria is willing to control technology, but only to the extent that its neutral status allows it.

U.S. officials, realising that a formal agreement is unlikely, are backing off and seeking a more informal approach, leaving open the possibility of tougher action. The U.S. wants tighter controls, especially on transit freight and an equip-

ment imported into Austria under bulk distribution licences.

The Austrians, however, reply that they have no control over transit shipments. "These remain outside the Austrian customs zone. We can't stop transit. It is out of our control and that's one of the misanderstandings on the U.S. side," says Dr Gustav Fischer, head of the licensing department at the Trade Ministry.

The U.S. is also concerned at the lack of sanctions against offenders. According to Austrian law, a trader who re-exports goods destined for the home market or wrongly describes goods for re-export will be denied further export licences.

On rare occasions, he may be taken to court if it can be proved that he intended to break the law.

"We can't be blamed if a U.S. exporter is exporting an item under control and against U.S. regulations. For an item to come through Austria, it has got to have clearance from the country of origin." The holes in the net of controls were on the original exporter's side, Dr Fischer maintains.

Under existing Austrian regulations, imports to Austria require an import certificate from the trade ministry. This prohibits re-export. Transit shipments are not subject to the same control.

The U.S. argues that lack of controls over transit shipments allows equipment to be sent to the East bloc with impunity. It is also concerned that bulk shipments under U.S. distribution licences are easily diverted to the East bloc.

Herr Lachna says that Austria is being used as a

scapegoat in quarrels between different departments in the U.S. administration. U.S. officials deny this, arguing that what the U.S. wants from Austria it also wants from every other country.

In the current talks, the U.S. will be pressing Austria to tighten import procedures and checks, introduce tougher enforcement and punishment for offenders, increase co-operation on transit shipments, and apply to bulk shipments the same regime as is now being applied for distribution licences in the U.S.

"You need a paper trail for every piece of technology," the U.S. official says. This approach will strengthen the Austrian view that the U.S. wants controls so widely applied as to be impossible to carry out effectively.

Germany's VEBA Group achieved substantially improved overall results during financial year 1983. This was largely the outcome of positive developments in petroleum and chemicals—formerly problem sectors—as well as a further growth of earnings in electricity and

which were financed entirely from internal sources, grew by DM 200 million to approximately DM 2.9 billion.

This positive trend has continued into the current financial year. Electrical power generation and supply, which grew by 12.6% during the first six months of 1984, remains the Group's most important sector.

PREUSSENELEKTRA's share of nuclear power rose from approximately 40% in 1983 to more than 54% this year. This has made it possible to maintain stable prices during 1984. Overall results for the electricity sector are expected to rise again during the current year.

The petroleum sector has managed to significantly reduce both risks and

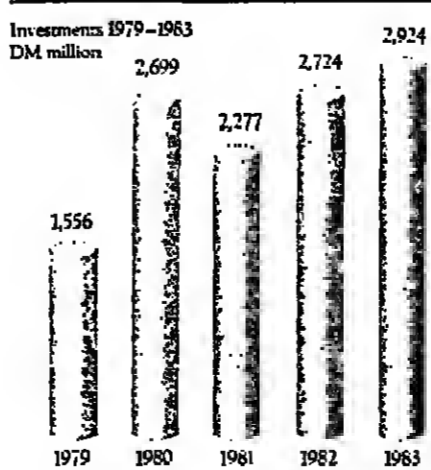

The trading and transportation activities of the VEBA Group, STINNES and RAAB KARCHER, have had good and stable results for a number of years—a situation which should continue into 1984 as well.

Thanks to successes in all sectors of the organization, overall sales of the VEBA Group increased by more than 5% to approximately DM 25 billion during the first six months of 1984. The Group's net income improved from DM 149 million during the first half of 1983 to DM 221 million during the same period of 1984. Assuming that the overall business upturn continues, it is likely that the Group's performance will improve in 1984 as a whole, which could result in a higher dividend.

VEBA

Strengthened Financial Resources

trading. The resulting financial resources have made it possible to strengthen and restructure the organization. Although Group outside sales declined somewhat to approximately DM 49 billion, net profit increased by DM 33 million, reaching DM 372 million. The Group's improved earning power is reflected in the figure for earnings per share, which rose from DM 9.20 in 1982 to DM 13.50 in 1983. Investments,

| | (DM million) | (+/- %) |
|---|--------------|-----------|
| Group outside sales | 24,886 | (+ 5.3%) |
| Production | 15,429 | (+ 7.4%) |
| Services | 9,457 | (+ 2.1%) |
| Electricity output | 33,621 | (+ 12.6%) |
| Natural gas production | 2,007 | (- 1.4%) |
| Crude oil production | 855 | (- 4.3%) |
| Crude oil processed | 3,464 | (+ 7.6%) |
| Group net income | 221 | (+ 48.3%) |
| Capital expenditure | 848 | (- 17.3%) |
| Total staff (as of June 30, 1984) ²⁾ | 76,036 | (- 1.5%) |

¹⁾ preliminary ²⁾ compared with December 31, 1983

losses. During the first half of the year, VEBA OEL achieved on balance positive results. This sector is expected to report a further improvement for the whole of 1984.

In chemicals, the continuing business upturn has resulted in greater utilization of production capacity and led to 11.4% higher sales. The results for 1984 are anticipated to improve substantially over 1983 and dividend payments are expected to be resumed.

To find out more about VEBA, its operations and performance, please get in touch with VEBA AG, Karl-Arnold-Platz 3, D-4000 Düsseldorf 30, West Germany.

DAKS Simpson
01-734 2002 PICCADILLY

One look tells you it's DAKS

Perfect and timeless tailoring in pure new wool
DAKS pure new wool 2-piece suit, £145. Simpson Piccadilly is the home of DAKS, with the largest collection of DAKS clothes anywhere in the world.
So look no further, visit Simpson, and while you're there see 'SIS on 2' - offering exciting, young designer fashion for all the family. Take breakfast, lunch or tea in the restaurant.
And, if you like buying from home, we now have exciting new catalogues. Contact our Customer Service Department for details - at 203 Piccadilly, London W1A 2AS. Telephone (01) 734 2002 Ext 81.

Open daily 9.00 am to 5.30 pm, Thursdays 9.00 am to 7.00 pm.

Talbot UK goes back into loss in first half

By KENNETH GOODING, MOTOR INDUSTRY CORRESPONDENT

TALBOT UK, which in 1983 made its first profit for 10 years, slipped back into the red in the first half of 1984 because of problems with its contract to supply car kits to Iran. The company is the British subsidiary of Peugeot-Citroën of France.
In the six months to end-June Talbot suffered a net loss of £1.89m compared with a profit of £1.539m for the same period last year.
Mr Geoffrey Whalen, who took over as chief executive this year from Mr George Turnbull, said yesterday that the deterioration was due to a reduction in sales to Iran, from 46,224 kits in the first half of 1983 to 22,232 in January-June this year.

Delays in letters of credit from Iran Talbot is thought to have been waiting for £15m - caused 750 employees to be laid off for six weeks at the Stoke, Coventry, engine plant.

Production of the kits, which are based on the old Hillman Hunter and sold in Iran as the Peykan, started again only on September 4.
Mr Whalen yesterday gave no forecast of full-year results because so much depends on whether the Iranians continue to supply letters of credit.

If the money comes through, Talbot should be able to make up the shortfall and supply 80,000 kits to Iran this year, compared with a breakeven level of 50,000. In 1983 Talbot shipped 87,840 kits and the contract - worth about £125m last year - was mainly responsible for the net profit of £3.1m for the year, compared with a loss of £45.7m for 1982.

The company, formerly known as Chrysler UK and renamed after being acquired by Peugeot-Citroën in

1978, made a profit in 1973 and subsequently accumulated losses totalling £392.2m.

Talbot continues to bear substantial reorganisation and redundancy costs - £1.12m in the first half of this year compared with £1.57m in the same period of 1983.

At the end of June, Talbot UK had 6,300 employees (including those in its widely owned retail outlets), a reduction of over 11 per cent from the 7,109 in December last year.

Mr Whalen said that UK sales of Peugeot and Talbot cars, sold together through a merged dealer network, continued at a "satisfactory level" and that the company was benefiting increasingly from the success of the Peugeot 205 "supermini" range.

By the end of August, Peugeot-Talbot had sold 53,412 cars for a 4.14 per cent market share, down from 62,443 and a share of 4.64 per cent in the first eight months of 1983. Mr Whalen expects to hold the Peugeot-Talbot penetration at about 4.5 per cent for the full year, down from 4.87 per cent in 1983.

Talbot UK car production in the first half fell from 56,773 to 54,839, almost entirely due to the reduction of kits for Iran.

Talbot's turnover fell from £292.6m in the first half to £266.4m. The operating profit was down from £8.1m to £3.9m. Interest costs £4.68m in the first half (£5.07m) and exceptional debits were £1.12m.

The return to profitability was a prime factor in the Peugeot group's decision, announced in February, to spend about £20m to modernise the Talbot UK plants and to build a new range of cars at the Ryton, Coventry, factory.

Midland hires BL finance director

By David Lascelles and Kenneth Gooding

THE FINANCE DIRECTOR of the state-owned car group BL is resigning his post to take a top planning job at the Midland Bank. Mr Frank Fitzpatrick, who managed BL's recent public sale of its Jaguar subsidiary, will be in charge of planning and control in the Midland's group finance division.

Mr Fitzpatrick, aged 44, will take up the post next month. He is the latest of a string of outsiders hired by the Midland. The bank has been striving for some time to reverse its poor profitability record and, more recently, to absorb the huge losses of Crocker National Bank, its Californian subsidiary.

A Midland spokesman said yesterday that the bank had a policy of placing professional people with an international business background in key positions. Mr Fitzpatrick is understood to have been approached by Mr Michael Julien, Midland's group finance director and himself a former British Leyland treasurer.

Mr Fitzpatrick entered the motor business by joining Ford as a graduate trainee. He went over to Leyland in 1974 where he played a leading role under Sir Michael Edwards, the then chairman, in raising government support and bank finance for the struggling car company.

Mr Fitzpatrick would not comment yesterday on the reasons for his move.

Midland, the third largest UK clearing bank, was the first to create a group finance division nearly two years ago. Its major task at present is to maintain Midland's £207m bid for the 43 per cent of Crocker which it does not own.

Social Democratic Party conference

Jenkins calls for strengthened electoral pact with the Liberals

By IVOR OWEN IN BUXTON

MR ROY JENKINS, former leader of the Social Democrats and ex-President of the European Commission, hinted in a major speech to the party assembly at Buxton, Derbyshire, yesterday at the anxiety felt by some senior figures in the party about the handling of relations with the Liberals by Dr David Owen, his successor.

He emphasised the need not only to preserve the existing relationship with the Liberals but to make it closer and stronger if the Alliance was to have a realistic hope of forming a government after the next election.

By implication, he indicated that Dr Owen needed to be more tactful in his dealings with the Liberals and this theme was also apparent in a speech by Mrs Shirley Williams, the party president. She

warned: "Divided, we cannot prevail in a harsh political climate."

Underlining the need to maintain the Alliance, Mrs Williams said: "We need the Liberals and they need us for as far ahead as we can see to achieve our goals for the country."

Mrs Williams also went out of her way to insist that under Dr Owen's leadership the SDP has not become "a one-man band."

Both Mr Jenkins and Mrs Williams, who shared another common theme in condemning the violence associated with the miners' strike and the Government's handling of the events leading up to it, were accorded standing ovations.

Mr Jenkins said: "The issue is whether we can break out of the bridgehead we have so spectacularly established. I believe we can. The

party was formed more than three years ago and gained six seats at the last general election.

"If we can get nearly 26 per cent (of the votes cast at the last election) in two years, we can get 36 per cent in six years," he said.

Mr Jenkins gave a warning about quarrelling with the Liberals, or believing the SDP "can distance ourselves too far from them."
Mr Jenkins strongly endorsed the view of Mrs Williams that the two parties must be able to demonstrate at the next election that "ours is not an alliance of expediency but a lasting alliance of principle."

Dr Owen won important support from Mr Alan Beith, the Liberal Chief Whip. Mr Beith, MP for Berwick upon Tweed, told the SDP conference that the Alliance was now an accepted fact of political life.

Owen urges stand against miners

By IVOR OWEN

DR DAVID OWEN, the leader of the Social Democratic Party, urged the Government yesterday to stand firm against the striking miners. "We do not want a settlement at any price," he told SDP members at the party conference.

"Although we always want amelioration and compromise to find a middle way there are some people with whom it is almost impossible to reach a compromise, and Arthur Scargill (president of the miners' union) is getting very close," he said.

Dr Owen said the National Coal Board had already come close to conceding more than was reasonable. It was not in the interests of the mining industry or the taxpayers for 15 per cent of pits to contin-

ue to cause annual losses costing £350m.

He urged SDP members to think about the consequences for the 55,000 working miners if the strike leaders were able to claim they had bludgeoned the Government into conceding their demands.

Dr Owen urged the Government to take up the SDP's proposals for "trigger ballots" under which any large group of workers could demand a binding vote on industrial action by union members.

Mr Ian Wrigglesworth, MP for Stockton South and the party's industry spokesman, said trigger ballots would allow the true voice of workers involved in industrial action to be heard.

He accused the miners' leaders

of subterfuge in organising a national strike on the basis of regional ballots.

Mr Roy Jenkins, a former joint leader of the party and ex-president of the European Commission, said Mr Ian MacGregor's appointment as chairman of the coal board was an example of Mrs Thatcher making appointments to important public posts on ideological grounds, bringing disaster in its wake.

Mr MacGregor, he said, had been appointed as a "symbol of provocation."

Mr Jenkins accused Mrs Thatcher of providing Britain with a bad government that was getting worse, so that the nation was now more dangerously geographically split than ever before.

London rail and bus strike called off

RAIL and bus workers' leaders have called off tomorrow's planned one-day strikes which threatened to halt all British Rail, underground and bus services in the London area.

The National Union of Railwaymen said it had been given guarantees by BR and London Regional Transport on consultation over future service cuts and job losses.

● OCCIDENTAL, the U.S. oil company, has discovered a new gas condensate field in the North Sea. Two tests have produced a combined flow of 21m cu ft of gas a day and 2,400 barrels of condensate. British companies involved in the discovery are BP, Lasmco, Taylor Woodrow and Anvil.

● THE VOLUME of shop sales in August was down from that in July and slightly lower than the average for the second quarter of the year, according to official figures.

The seasonally-adjusted index for the volume of retail sales in August was provisionally estimated at 111.3 (1980=100), almost the same as the July figure but 4 per cent below the peak level recorded in June.

● THE VICKERS yard at Barrow has won an order worth about £200m to build the sixth Royal Navy Trafalgar class nuclear submarine and has been invited to tender for the next one. It is expected in service in the early 1990s.

The British Shipbuilders' subsidiary, which is to be sold to the private sector, has built or is constructing all but one of the 17 other nuclear submarines in the fleet.

The Card in their hands means greater control in yours.

The American Express Corporate Card System.

Company penny-pinching on expenses can hamstring your travelling employees. But every unnecessary pound spent on expenses is a pound off the profits.

The American Express Corporate Card system frees your employees from financial worries when they are away, while it increases your control over their spending. Your company wins both ways.

The key to increased control

The American Express approach to the management of business expenses couldn't be more simple. Once your company is enrolled, the employees you nominate are provided with the American Express Corporate Card. It gives them all the benefits of the Personal Card with one fundamental bonus for you. You get the tightest possible control over expenses.

They use the Card to take care of airline, hotel, car hire, petrol, rail, restaurant and other expense needs. The Card is valid around the world.

They sign for their expenses and you get uniform, detailed receipts of all the charges. There is a perfect 'audit trail' so you know exactly who has spent what, where and when. You hold the key to tighter control over expenses.

No worries about employee misuse

The Corporate Card has another advantage which distinguishes it from the Personal Card. Accept the American Express Waiver of Liability and your company is protected from employee misuse of the Card.

The Card allows employees to take emergencies in their stride; while your company is protected against unauthorised use under the conditions of the American Express Waiver of Liability.

Check before you pay

The system provides you with a Monthly Statement of Account together with Management Information

Reports. They give you at-a-glance coverage of the whole account and how each, and every, Card has been used each month. You have full control because every charge can be checked before it is paid. The American Express Corporate Card system is comprehensive but, with its wide variety of billing systems, it is flexible enough to complement your company's existing account methods.

Release working capital

Your cash flow is improved by the Corporate Card system because the majority of business travel expenses can be charged to the Card. There is no need to issue large floats and you are only billed after the expenses have been incurred. The working capital released is yours to re-allocate more profitably.

Cost efficient travel

The Corporate Card system is only one of the many financial management tools available to you from American Express Travel Management Services. We can help you formulate travel policies that will eliminate the hidden costs of ad-hoc buying. With the help of your people we can create the most efficient travel expenditure accounting procedures. And with a network of over 1,000 American Express Travel Service Offices around the world, nobody is better placed to get you the best deals on fares, hotels and the day-to-day necessities of travel.

Action it now

Find out how the American Express Corporate Card system can be tailored to meet your company's needs. Tear out this advertisement and ask your secretary to send it along with your business card to Roy Stephenson, Vice President Travel Management Services, American Express Europe Limited, Southside, 105 Victoria Street, London SW1E 6QX. Or ring him on 01-828 7755. He'll take it from there.

The greatest micro show on earth.

CONSIDER ALL THE MICROCOMPUTING OPTIONS FOR YOUR BUSINESS

If you're in business, it's your business to know what's what and who's who in the world of microcomputers. So, before you buy, there's only one place to be. The 7th Personal Computer World Show at Olympia, September 20-23... the most popular micro show in the world.

Talk to the giants of the micro world... find out what's new to meet your business needs... visit the Business Advice Centre. Avoid risks and stay in the know at The Personal Computer World Show.

10 am to 7 pm daily Sunday 5 pm closing

September 19th - Trade/Press day only.

Special Business Ticket £3.00 on production of a business card at the door or in advance on company paper with cheque to PCW 84, 11 Manchester Square, London W1M 5AB. Ordinary Ticket £3.50. Child £1.50. Group Ticket (10 or more) £2.50 per person. All in advance or at the door.

The legend that whispers luxury.

No other car reflects your success like a Jaguar.

No other Jaguar establishes your standing like the Jaguar Sovereign.

It is a car without equal, a unique combination of effortless performance and absolute luxury.

For most, the Jaguar Sovereign will be an experience only to be imagined.

For the privileged, it will be an experience to be savoured and often repeated.

Behind the wheel of a Jaguar Sovereign you can settle in the seclusion of quiet, restful elegance.

Cossetted by the richness of fine quality leather hides, burr walnut veneers, deep-pile carpeting, air-conditioning and a range of standard appointments that, on any other car in its class, would read like an expensive list of optional extras.

Reassured by the Jaguar Sovereign's legendary road holding, smoothness of ride and, not least, its outstanding value for money.

Jaguar Sovereign 4.2 £18,995.00.

Jaguar Sovereign H.E. £21,995.00.

Prices, based upon manufacturer's RRP and correct at time of going to press, include seat belts, car tax and VAT. (Delivery, road tax and number plates extra.)

Fresh plan by BCal for bigger share of air routes 'rejected'

BY MICHAEL DONNE, AEROSPACE CORRESPONDENT

FRESH PROPOSALS put to the Government yesterday by the independent airlines for a greater share of routes held by the state-owned British Airways are believed to have been rejected. The issue has grown into a bitter dispute between BA and the independents, led by British Caledonian.

Sir Adam Thomson, chairman of BCal, held talks yesterday with Mr Nicholas Ridley, Transport Secretary, at which BCal executives presented their new plan for route transfers. That went further than last week's BA proposals for an extension of "dual designation" to permit BCal to compete with BA on various European and long-haul routes.

It appears that Mr Ridley asked BCal to scrap its plan, while Department of Transport officials, with the airlines, tried to draw up a compromise that would bridge the gulf between the two sides.

BCal's plan, if adopted, would have cut BA's share of the UK's overall scheduled air services from the present 80-plus per cent to about 60 per cent. Mr Ridley and his officials found that unacceptable.

Instead, officials of the department are trying with both sides of the airline industry and with other government departments, including the Treasury and Trade and Industry, to find settlement proposals

that can be put to the Cabinet when it meets next Thursday. Sir Adam said yesterday that he had been asked to keep the details of the Government's ideas confidential, although he described them as a "mix" of all those put forward so far.

"But we will not compromise our position," Sir Adam said. "We believe that the Civil Aviation Authority's original proposals represent the minimum we can accept."

Sir Adam also emphasised BCal's determination to transfer its flying operations from Gatwick to Heathrow if the Government rejected its pleas for more routes. BCal would maintain a maintenance base at Gatwick, but would move its scheduled services "lock, stock and barrel" to Heathrow, so as to be able to compete more effectively with a privatised BA.

It was clear yesterday that the original CAA proposals for route transfers have been effectively rejected by the Government, as damaging not only BA's position but also jeopardising its impending privatisation.

However, the Government cannot entirely endorse BA's own pleas to be left intact, because that would leave the independent airlines at the mercy of a dominant BCal described as a "monopoly" - airline in the world market.

Health food sales increase to £120m

By David Fishlock

THE SPECIALIST health food market, with sales of more than £120m a year, is losing its "cranky" image and gaining from increased interest in healthy eating, according to a study by the British food manufacturing industry's co-operative research association.

The report says the main restraint to growth is the limited number of health food stores and main shopping street locations, but there is "still widespread public reluctance to enter a health food shop." It forecasts that the number of health food stores will increase from 1,300 in 1983 to 1,500 next year.

About 350 manufacturers and distributors are serving the UK market. They are mostly small with the notable exception of Booker Health Foods, the subsidiary of Booker McConnell. According to the report, Booker exerts considerable influence through its wholesaling subsidiary Brewin's and its Holland and Barrett retailing chain with its six brand names.

Wide interest in dietary fibre has led to a new generation of products, mostly breakfast cereals, and brought mass appeal for such products as wholemeal bread.

Health Foods in the UK, Leatherhead Food Research Association, Rendalls Road, Leatherhead, Surrey

Top U.S. circuit plants 'non-union'

BY OUR LABOUR STAFF

ALL THE main U.S. companies manufacturing integrated circuits are non-union, both in the U.S. and in their European subsidiaries, says the latest European Trade Union Institute report on the electronics and information technology industry.

It says that these companies recognise unions only when forced by national legislation. In the UK "none of the major U.S. semiconductor companies recognise unions."

They include Texas Instruments, Motorola, National Semiconductor, General Instrument and Hughes Microelectronics. NEC, the Japa-

nese-owned semiconductor plant in the UK, does not have unions either.

In contrast, the UK-based firms - GEC, Plessey, Ferranti and Standard Telephones and Cables - all recognise unions in their UK plants.

The institute calculates that in the UK the number of people employed in the manufacture of circuits is only 10,000 to 15,000 out of 500,000 for the whole electronics sector.

In the U.S., the report says, the Communication Workers of America (CWA) is co-operating with other unions such as the Electrical Work-

ers and Machinists in trying to re-organise in this area.

"Efforts have so far been concentrated in the East Coast Silicon Valley" along highway 128 near Boston. The CWA has set up a \$1m research fund on the companies concerned and is launching a campaign in Silicon Valley California.

The institute also points to an increasing "polarisation" taking place between highly skilled design, test, and inspection workers on one hand and a number of unskilled machine operators on the other.

European Industrial Policy for the Electronics and Information Technology Sector, ETUI, Boulevard de l'Imperatrice, 68, 1000, Brussels.

WE ARE MORE THAN AN INTERNATIONAL BANK. WE ARE A LOCAL BANK IN 38 COUNTRIES.

Your business is not restricted to one country. Neither are your banking needs.

At Bank of Boston, we have a stronghold wherever your business takes you - with over 200 offices in 38 countries around the world and throughout the United States. And from our first international office in Buenos Aires over 65 years ago, to our current expansion throughout the Far East and the Caribbean, we can do more for you than any other

international bank. One reason is we have 200 years of experience.

We really know every country where we do banking. So we can introduce you with everything you need to know about the market. From local bank laws to local customs.

So you are determined to do business in the world, we are determined to make you feel at home wherever you are.

SATELLITE COMMUNICATIONS

Sixteen years ago, Hitachi leapt into space without even leaving the ground. The vehicle: A satellite tracking system capable of shooting 10-megawatt laser pulses to altitudes of up to 2,000 km. The legacy: A wide range of ground station equipment and satellite peripherals acting as interpreters for messages sent from space.

Good news from your eyes in the sky

Today, the results of Hitachi research are in use all around you. Attitude control systems that keep communications satellites pointed in the right direction once they're in orbit. Rocket-borne measuring apparatus. Earth stations by the dozen to record and analyse satellite-gathered geological and environmental data.

Our aerospace and communications specialists are working with the space authorities of Europe, Asia and North America to improve basic satellite technologies. They are creating new tracking facilities, integrating data-processing procedures and increasing satellite utility.

In fact, we are constantly coming up with innovations and new applications. Most recently: An inexpensive parabolic antenna/tuner system for home televisions, ready to receive super-high-frequency (12 gigahertz) satellite signals and give

you access to the world's newest digital broadcast medium.

These are just a few of the ways in which Hitachi puts advanced technology to work for you. Creating practical tools that meet your needs...and those of professionals involved in remote sensing, broadcasting, and virtually every other field you can name.

The best of worlds is yet to come

Our vision of the future includes cable TV networks linked by satellites that will carry as many as 108 different channels all around the world. Orbiters owned by individual companies, enabling laser-beam transfer of private business data. Expansion of global banking and telecommunications services. And much, much more.

We'd like you to share in the benefits of our scientific research, covering the next generation of lasers, sensors, optical transmitters, and other electronic devices. For improved business efficiency. For a higher quality of life. Two goals we've pursued for 74 years as part of our commitment to a better world through electronics.

WE BELIEVE ALL NATIONS CAN BE UNITED THROUGH SATELLITE COMMUNICATIONS

TECHNOLOGY

KODAK STRUGGLES AGAINST A WORLD OF ELECTRONIC IMAGES

Microfilm fights for a future

BY GEOFFREY CHARLISH

KODAK, CONTINUING to make a natural case for the use of microfilm in the electronics-dominated information technology market, has revealed some of its plans for KIMS.

KIMS stands for Kodak Image Management System. It is the photographic giant's view of the way in which modern computer-assisted retrieval of business microfilm records (CAR) can be welded into electronic networks of terminals, printers and other forms of storage.

It is all part of the battle that the film makers seem destined to fight. In the consumer field there will soon be high-definition electronic still cameras that record images in semiconductor stores for direct play-back over the TV set—they already produce quite acceptable results.

In the computing and electronics industry, people are inclined to dismiss micrographics as a technology fighting a rear-guard action in the face of developments like high-density magnetic recording and the optical disc.

But the argument is more complicated in that it revolves round exactly what is being recorded and how often it is likely to be accessed.

In banks, building societies and insurance companies there are large numbers of customer documents bearing signatures

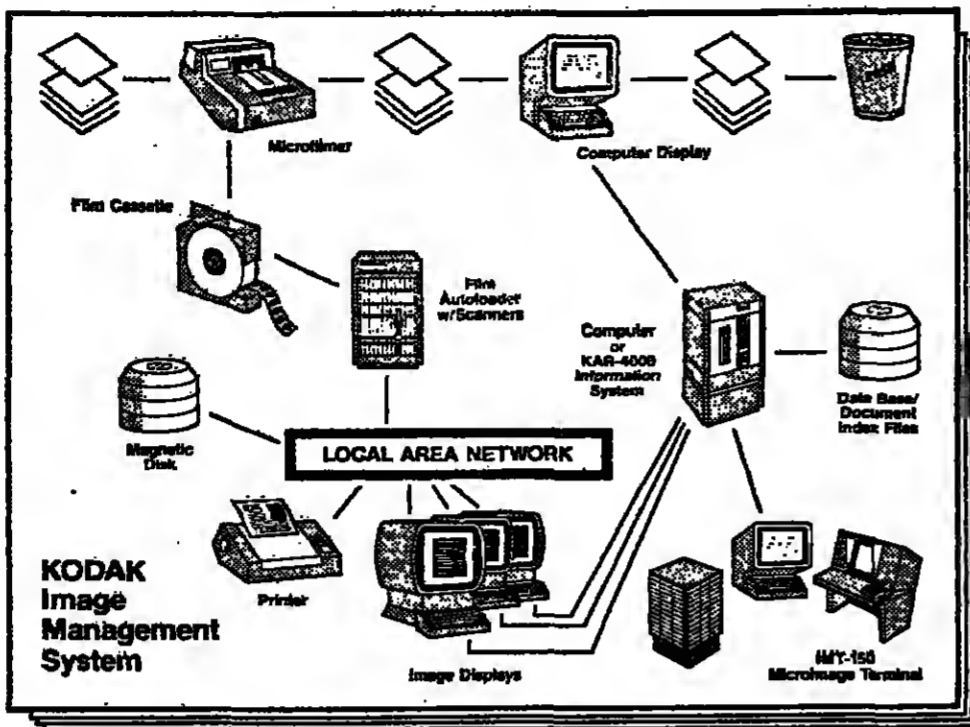

Kodak asserts that film-based systems are still the most cost effective

(cheques, policy documents) of which true facsimiles must be kept but which will not be accessed frequently.

They are obviously not a candidate for keyed input. A case might be made for scanning the original document and storing the resulting digital data in the laser optical disc systems, now coming on to the market.

These are akin to a gramophone record with the groove replaced by very large numbers of microscopic digital pits burned in by the laser. Another laser system "sees" the dots for playback. Astonishing amounts of data can be stored—up to 0.5m A4 documents per 12-inch side.

But the facsimile ability vanishes, so that the original documents might have to be stored, which can be expensive

The Kodak Image Management System is being developed to provide microfilm users with microimage transmission capability. This system will permit users to scan, digitize, and transmit microfilm images electronically to remote work-stations, greatly increasing the power and flexibility of microfilm data bases

at city centre sites.

GE in the U.S. recently decided to scan the 1.5m microfilm drawings and production documents in its turbine generator department in Schenectady. Here, more frequent access is involved, from many terminals, some remote. The department is now scanning its existing microfilm records and putting them on the optical disc. They are electronically enhanced and are easily transmitted elsewhere.

The system was developed by Integrated Automation, based on the Thomson CSF optical disc in a "juke box" arrangement. A similar system went into the U.S. Library of Congress.

Last year Kodak briefly announced work on an optical disc which is now revealed to be 14 inches across with a capacity of about 5,000 megabytes (about 100,000 pages of A4 text). But the way in which this might be integrated into the new KIMS system is not clear at the moment.

In KIMS, the basis for bulk storage remains the roll of 16mm microfilm. The film is accessed using two systems. One

is the recently introduced KAR-4000, which allows access to computer files from which summary details of a specific microfilm frame can be displayed, or the frame itself printed from index and location instructions provided on the screen.

Secondly, Kodak now has a system which, obeying "wired" instructions from a remote point, will select a film cassette from a mass store, find a frame, scan it using semiconductor cameras and make the image available as a digit stream.

The images can then be brought up on high resolution cathode ray tube display terminals and can be transmitted by line or radio to remote terminals. These terminals will have buffer stores so that the user can "leaf through" a number of frames on the CRT display.

The terminals will also be able to manipulate the images, enlarging or reducing them, removing unwanted detail, and allowing them to be seen at the same time as data coming direct from a computer, using divided screen techniques.

There are other advantages. Microfilm, given some magnification, is human-readable and is a true copy of the original. What is more, it is a good deal more difficult to tamper with microfilm compared with digitally stored images. To take one frame from a roll, print it to a large size for making alterations, re-microfilm it and replace it on the roll, means reproducing the whole roll, otherwise joins in the film will easily be detected.

If Kodak introduces its new optical disc into the KIMS system it will probably be for non-archival or semi-archival storage of images that need to be accessed more frequently than, say, once per 90 days.

Many of the organisations that need microfilm already use it. For them, KIMS offers a bridge for the blending of film into the other, electronic, systems the companies will need for the future.

How to pick the next software winner

EDITED BY ALAN CANE

THE GREAT triumph of the personal computer has been its ability to bring computer power to individuals. This has happened through the introduction of software packages and ways of using the powers locked up in the machine that were thought impossible in the now ancient days of data processing.

Visicalc was, perhaps, the best example of a piece of software that made the micro useful to those other than programmers. It brought financial computing to small companies.

Visicalc's imitators and its descendants have never had quite the impact that the original did back in the early days of the micro business. Now, the micro industry is looking around for a follow-on to the Visicalc success.

One of the most likely contenders is in the field of skills training. Much of the emphasis of the Government-backed Alvey project is on the sort of software that will encapsulate human skills in a computer and enable the rest of us to take advantage of them.

But we shall have to wait a few years for the so-called expert system to become as ubiquitous as the Visicalc-style spreadsheet programs are today.

In the meantime, there are other methods of putting human skills on to computers. Human Edge, a California based software company, released a batch of packages earlier this year aimed at providing management, sales and marketing skills in the form of a training package on the IBM PC.

The Management Edge, the Sales Edge and the rest are designed to enhance skills in these areas by putting users through their paces in front of a personal computer. It is too early to say how successful this angle will be but it will certainly be interesting to see how it goes.

In the UK, skill-building is being approached from a different angle. At the London School of Economics, for example, the Decision Analysis Unit is looking at ways that decision-making skills can be helped using a personal computer. Using a system called Maud, the Unit is implementing the ideas of an American psychologist called George Kelly together with those of other thinkers including the Cambridge University mathematician,

Frank Ramsey. Dr Lawrence Phillips of the unit describes Maud as "an interactive system for helping to solve ill-formed problems that are characterised by multiple objectives."

He cites the simple example of choosing a job. In this case the users enter the options open to them—that is a number of different job prospects. The system goes on to request data about the differences between the options entered and asks the

user to enter ratings on a scale of one to nine.

The process is repeated until a bank of data about the users' perception of the problem is built up. It then produces an analysis based on those judgments.

"It is very unusual that the scales that you start off with are the ones that you end up with—the process is iterative and can even show you some new insights into the problem," explained Phillips.

Unlike the so-called expert systems currently being developed under the Alvey project and elsewhere, Maud makes no attempt to understand the data—it merely analyses the structure that the user places on it.

The LSE has been experimenting with a more sophisticated version of the same idea for what it calls the Decision Conference.

"The most important part of a Decision Conference is that it gets managers to see a shared view of their problems—very often they will see them only from their own personal perspective," Phillips noted. Similar work is being done at the University of Bath with a system called Cope. Colin Eden, a researcher at Bath, described Cope as a "system for manipulating ideas" and compared it with a product

launched at the beginning of this year by Caxton—the Brainstorm.

"It is much more sophisticated than that and a lot more flexible," Eden said.

Although Cope requires a much larger computer to work effectively, the idea could be transported to a micro especially as they grow in storage capacity.

In light of the sort of product that could be in the pipeline for personal computer users in the future, Eden has some interesting insights into this type of software.

"I think the quantitative approach to problem solving can be misleading. It implies a logic which does not map onto the way the mind works. What we really do when we solve problems is to play around with concepts and ideas—and talk to people," he said.

Personal computers could play an important part in the process of playing around with ideas as a means of enhancing those skills that are difficult to define—how to manage, how to sell and how to make effective decisions.

The danger is that we may all have the same piece of software advising us.

DOCUTEL/Olivetti has cut the suggested retail price of its M18 personal computer range. The portable and desk-top models are to drop in cost by \$500. Each machine comes with the MS-DOS 1.25 operating system and a set of eight programmes of business software.

The company says that the price reduction is in response to similar moves by other personal computer makers. IBM and Northern Telecom seem to be following the same paths with the IBM PC AT and Northern Telecom's family of Xenix-based Vienna products. Both have chosen to use the Xenix operating system and the same processing chip—the Intel 286—for the machines.

Northern Telecom has already started shipment of the first systems using this combination but sees IBM's move as a step towards a world standard.

Texas Instruments has also announced an 18.2 Mbyte Winchester Disk for the TI professional computer. This is for business computing applications where several machines are connected together by a local area network and share a common database.

Offshore Underwater rescue

NEXT MONTH tests begin on a novel lifeboat designed to save divers working underwater on offshore oil rigs. If a diver has to come to the surface in a hurry or is undergoing decompression on the oil platform when some emergency occurs so that the rig has to be evacuated, he faces experiencing the "bends" where oxygen bubbles occur in the blood.

Offshore Marine Engineering has developed the lifeboat which has an on-board hyperbaric chamber for divers. This means that they are able to lessen the risks of the highly dangerous "bends."

It can cater for up to 15 divers at a time and in the 9.2 metre version an additional 53 people outside the chamber. Designed to meet many of the requirements of the North Sea, it conformed to British, Norwegian, Dutch and U.S. safety codes. It is, for example, able to withstand hull temperature of more than 1,000 deg C. The hyperbaric chamber can produce pressure equivalent to diving to 450 metres.

Seminar Better information

A ONE day intensive seminar which examines external telecoms links between trading partners, and ultimately with the consumer, is to be organised by Oyez Scientific and Technical Services of London.

Called "Interbusiness Networking" it will be held at the London Marriott Hotel on September 27. The conference will look at ways of improving communications between suppliers and customers and also how stock information, cash payments and market intelligence can be transmitted. Topics such as home shopping will also be covered. More on 01-236 4080.

Introducing the first step-by-step approach to integrated automation. The Allen-Bradley Productivity Pyramid.

The Productivity Pyramid is a philosophy, an outlook, a strategy. It visualises a way to maximise productivity. To magnify efficiency. To enhance profitability. It represents a revolutionary approach to automation control. An approach so comprehensive it closes gaps others can leave open. And integrates "islands of automation" others let stand in isolation. The Productivity Pyramid views a plant as five separate and distinct levels. Each representing a different set of tasks. Each benefiting from a different type of Allen-Bradley automation control. The ultimate goal: To weld each of these levels into a single, seamless automation network. From the top to the bottom. From your mainframe computer to the simplest control device.

The Productivity Pyramid philosophy yields a company ruled from the top down and informed from the bottom up. Unified by information speeding reliably along electronic highways. Producing a company wiser than ever before. More efficient than ever before. More competitive than ever before. It is the Allen-Bradley Productivity Pyramid. Today, we manufacture the control hardware to make it work. Today, we produce the communications networks to unify it. Today, we possess the technical skills to help you implement it. But make no mistake... Allen-Bradley does not construct factories. Nor assemble a system in isolation from you or

your consultants. Instead we work as partners to make your system a functioning reality. Level-by-level. Stage-by-stage. Product-by-product. We are already achieving this with many blue chip companies with companies like yours, committed to prospering in the new industrial age. If your company shares this philosophy we should get together. Allen-Bradley Companies, Distributors and Customer Service Support are available worldwide. Write to: Allen-Bradley International Ltd, 35 Friday Street, Henley-on-Thames, Oxfordshire RG9 1AN, U.K.

AB ALLEN-BRADLEY
We're reshaping the way industry thinks. And works.

THE MANAGEMENT PAGE: Small Business

EDITED BY CHRISTOPHER LORENZ

Frederick Harrington

A fair way to trade

By John Kitching

COCKTAIL pubs, working men's clubs, traditional pubs—Geoffrey Harrington has seen them all. But not simply as a customer.

He manufactures and sells pub interiors. "Whatever the client or the brewery wants, we design and supply," says Harrington, 55-year-old chairman and managing director of his family company in Nottingham.

His favourite interior is Victorian. "All mahogany glass and brass, that's my kind of pub." But since diversifying the traditional contract furnishing company Frederick Harrington into pub interiors in the mid-1960s, he has learned that the needs and tastes of some clients can differ dramatically from his own.

One of the big challenges for Harrington was getting his company on to the export map, and an early boost was winning a place at the Internorga Hamburg trade fair in 1981.

This was first prize in a competition called "New Exporter for the Eighties" organised by Westminster Chamber of Commerce and the British Overseas Trade Board.

An immediate spin-off was a place, only weeks later, at a fair in Odense, Denmark. The company took a larger stand, and the Harrington interiors caught the eye of Swedes and Norwegians.

"We learned that trade fairs could be very hard work, very time-consuming, but also that they are a useful window for a company such as ours, which can really set out its stall," says Harrington.

The main export markets now are Canada, Abu Dhabi, Dubai, Norway, Sweden and India, where a Raj-style bar is being constructed in Bangalore.

One year after winning the place in Hamburg, Harrington appointed four directors responsible for specific areas of the business. They are Mark Pearce (design); Terry Carter (production); Ray Whitmore (finance) and Jack Robinson (contracts).

Now Harrington says the company is "bulging at the seams" in what he admits are "somewhat Dickensian" premises in the Carrington area of Nottingham. There are hopes of a move from the present 25,000 sq ft building to premises of about 35,000 sq ft within a year.

Order books have "never been fuller," says Harrington. "We're full well into the autumn, and we're terribly opti-

Geoffrey Harrington: trade fairs "a useful window"

mistic." He hopes that the next step will be a joint venture with a UK brewer in the U.S. But he admits that pub interiors and contract furnishing generally have become popular and highly competitive. Harrington says the main competitors are Morgans of Emsworth, Hants, and Keen of High Wycombe, Bucks.

So what is the style of management that has helped Harrington to grow in the last few years? "Our approach is certainly open door," the chairman says. "Anyone with a problem comes to me, I would like to think."

Design director Pearce, 31, says: "It's a very tightly-knit workforce. We work together, and if we're up against deadlines, the hours are put in. There is a tremendous pride in the products and the craftsmanship."

Harrington says one of the company's strengths is that it provides a "total pub concept... right down to the beer mats and the bric-a-brac, if that is what is required."

Pearce emphasises that the "total package" also applies to cocktail-style bars. He points enthusiastically to a large wooden frame: "It's going to be the portico for an Oslo disco."

The company was set up in 1960 by Harrington's grandfather as a furniture retailer. It switched to manufacturing and to contract furnishing in the late 1950s and early 1960s, during which time it acquired three local companies: an upholsterer,

a cabinet maker, and a furniture frame-maker.

"Then we felt a need to diversify," says Harrington. "Local breweries wanted to deal with local firms when equipping pub and club interiors, and we felt that this was an area to move into."

The company won contracts for working men's clubs, sports clubs, and did some work for government bodies such as the Property Services Agency.

Now, pub interiors account for at least 60 per cent of total turnover, and the company employs about 70 people. It expects turnover of about £2m in the year ending September, 1985, about £1.25m expected this year. Turnover on exports could increase by up to 25 per cent in the next year, Harrington says.

"We have a broad base for expansion, underpinned firmly by our domestic markets," he says.

The avuncular Harrington, sometime rugby forward, magistrate and tax commissioner, is in no doubt that the company's priority is to find three or four agents in the U.S.—preferably in California or on the eastern seaboard—through which joint ventures with UK breweries could be established.

"We've been consolidating latterly," says Harrington, "improving our machinery for the export front. We've seen a lot of people in our business who have gone under: we feel we have the basis for expansion."

Pressure for prompt payment

THE GOVERNMENT could ease the financial pressures on new firms by forcing big companies to pay their bills more promptly, say the authors of a report just published.

The results of a recent survey by Dr Martin Binks and Philip Vale of Nottingham University show that "new firms' demand for external finance was increased by the common practice of large and/or established businesses taking extended trade credit" and that the net trade credit outstanding is often "very substantial."

"Legislating for the prompt payment upon receipt of invoice may therefore be an effective way of easing new firms' finance problems in the short run," say the authors.

This and other observations are contained in papers summarising the results of extensive interviews with 100 new independent manufacturing businesses which had been established in the Nottingham area since 1978. Although cautious in their claims and conscious that the data was collected during a severe recession, Binks and Vale make a number of detailed suggestions about how policy might be amended and changed.

They note, for example, that 43 per cent of the firms visited started with less than £5,000 and contrast this with the £5,000 lower limit on borrowers imposed by the Government's Loan Guarantee Scheme. They also argue that the LGS interest rate surcharge subjects companies to a cost disadvantage and thus increases the likelihood of failure. Only 30 per cent of the interviewees, meanwhile, "would entertain the notion of external equity holdings."

Although there has been a proliferation of advisory services for small firms in recent years, Binks and Vale call for more "face to face" counselling and say that advisors need "to take the initiative in contacting new firms rather than waiting for them to seek help in the event of problems."

As for premises: "The clear need is to provide appropriate premises at their market price rather than increasing the supply of superior accommodation which new firms would

much appreciate but cannot afford."

Significantly, the data collected from the 100 firms interviewed "adds considerable weight to the theory of displacement." Any selective subsidy to one group of firms competing with a group of enterprises not receiving the subsidy, in other words, is likely to increase the rate of closure among the non-qualifying businesses.

"The Nottingham results demonstrated the predominance of competitive pricing among newly established manufacturing businesses and also highlighted the fact that most of the new firms visited perceived their competitors to be other small firms." The authors conclude, however, that until more research is carried out into the reasons for business failure the distortions of policies to encourage start ups cannot be properly assessed.

The Nottingham survey results are contained in six separate papers, price £3 each, available from Department of Economics, University Park Nottingham NG7 2RD.

Tim Dickson

Competition for skilled workers

NEWS THAT Nissan had chosen Washington, Tyne and Wear as the site for its new car plant in the UK has been widely celebrated in the North East of England. The Japanese motor giant's move does not fill Alexander Anderson with any great enthusiasm.

Anderson is the joint managing director of Anson, a small engineering company based at Blaydon, near the Nissan site. "Millions and millions of pounds of Government money has been poured into this region over the years and as far as I am concerned it has done us no good," says Anderson, whose company employs around 30 people. "Planting big companies in the region may create a few thousand jobs, but among the disadvantages is the fact that they have a chance to cream off the best junior, middle and senior management in the area to the detriment of indigenous companies."

Anderson is not alone in expressing dismay at the exodus of skilled labour and management from local North East companies. Through the success of Anson he is also doing something to reverse the trend. Started in 1981, the company manufactures specialised flow line devices for the oil and petrochemical industries which it has sold to many major customers. Progress is such that new factory premises have been acquired on the Team Valley Trading Estate at Gateshead.

Based on experience gained in the North Sea the company is also about to launch itself into the international market place

by attending exhibitions in Moscow this year and Bahrain and Aberdeen in 1985.

Anderson says he can hire unskilled employees locally but in view of his expansion plans is being forced to recruit new skills "from all over the country."

Besides the "know how" built up over many years of engineering, he attributes Anson's achievements so far to a key concentration of quality and reliability. The company's use of technologically advanced equipment is about to be augmented by robotics and as Anderson says, "Your standards have got to be extremely high. Our competitors are all based in the United States."

National Westminster Bank is banking the drum on Anson's behalf because the company is the 100,000th customer to use its Business Development Loan facility. Launched in the early 1970s, this is a fixed rate lending scheme aimed at the smaller business.

According to NatWest it has proved highly popular with borrowers. In 1983 the Bank lent around £4m under the scheme on the back of some heavy promotion and competitive pricing. The big advantages of a fixed rate is that cash flow planning is more reliable. The true interest rate at the moment is about 14 per cent fixed for a secured loan over one to five years—but all the High Street banks now have fixed-rate lending schemes for the small business so it is worth shopping around.

'Higher risk' faced by BES fund

SIR MONTY FINNISTON, former chairman of the British Steel Corporation (BSC), is to head the management team of a new fund launched under the Business Expansion Scheme (BES).

As its name implies the Industrial Technology Fund, which is looking for £2m from private investors, will be aiming to back companies with a technology bias.

Besides Sir Monty, who chairs seven companies (among them Batterfield-Harvey, Future Technology Systems, Metals Science and KCA Drilling) and is a director of several others, the board of the management company, Industrial Technology Securities, comprises other successful businessmen.

They include Jan Berglund, formerly Professor of Industrial Engineering at the Royal Institute of Technology, Stockholm, and now the UK-based managing director of the Swedish controlled Habla group of companies which is principally involved with manufacturing components for the communications industry; and Len Whittaker, a chartered engineer

who became chairman and managing director of the Radamec group (manufacturers of defence and electronic equipment) as a result of a management buy out.

Sir Monty believes that the new fund has the right combination of industrial, technological and financial skills and, although he does not say so publicly, clearly feels his team is better equipped to help technology-based companies than most City of London based venture capitalists.

Britain's acknowledged talent for invention and innovation, he says, has unfortunately not been "matched with the financial support necessary to convert these innovations to industrial and commercial advantage."

The initial management fee of 5 per cent plus VAT and the right to subscribe for options up to 10 per cent of the equity of investee companies is roughly par for the BES course at present. Like Granville and Britannia—two other recent established BES funds—IIF thinks that with individuals now starting to

Sir Monty Finnieston

consider their tax position for 1984/85 the timing for the launch should be right.

The problem Sir Monty and his team will face is persuading investors to dip into their pockets for a fund which will inevitably be seen as "higher risk" than most of the other more conservatively run BES funds.

Hoare Octagon Business Expansion Scheme fund, which plans to specialise in the information technology sector, has raised just over £2m from private investors. A spokesman for stockbrokers Hoare Goyett says that he was pleased with the response and had never expected the fund to reach its maximum target of £4m.

In brief...

"CORPORATE VENTURING" is well established in the United States where in 1983 major U.S. corporations made an estimated 150 direct venture capital investments in emerging growth companies. In Britain and Europe such strategies are less common.

"New Opportunities in Corporate Venturing"—a one day conference in London on October 17—will highlight new avenues for corporate development and identify opportunities for collaboration and co-operation between venture capital firms and big companies. Presented by Venture Economics and accountants Arthur Anderson

and Co, the fee is £225 plus VAT. For more details contact Burns of AA on 01-836 1200 or Susan Lloyd of Venture Economics on 01-995 7819.

THE National Federation of Self Employed and Small Businesses has put its name to the 1984/85 "Business Location Handbook." A chunky 304-page volume, it contains much valuable information under one cover, notably sources of grants and financial aid and details of property locations and useful contacts on a regional basis. Copies (£3 plus postage) can be obtained from the NFSESB's Parliamentary and Press Office, 140 Lower Marsh, Westminster Bridge, London SE1.

An excellent meal elegantly served and enjoyed in comfort. Seats wide enough to give you ample elbow room and legroom. MAS First Class for those who are used to the best.

MAS 747 FIRST CLASS. FOR THOSE WHO ARE USED TO THE BEST.

THE ARTS

The Royal Academy/William Packer

A golden view of Dutch painting

The room is plain enough, with its bare boards and stiff chairs. For one might think, for such fine and fashionable company unless it is for hire, and this but the latest of innumerable sociable occasions it has had to serve. The light streams in as bright and cool as day, and surely this is a mid-day party, a holiday marked perhaps in some half-public place: how else to explain such evident yet such usual, such unremarkable pleasure being taken so naturally. The elegant company gossip lightly together, drinks and firts perhaps, takes a desultory throw at backgammon for all the world as though it were any Saturday or Sunday morning in the private room or parlour of pub or club—and the common, mundane experience, that shared humanity, touches us directly across three centuries.

"Elegant Company Gaming and Drinking" by Anthony Palamedesz

The painting is by Anthony Palamedesz, dates from the early 1630s, and hangs in the second room of the Royal Academy's magnificent offering to us this autumn, "The Age of Vermeer and De Hooch", an exhibition organised by the Philadelphia Museum of Art, and come here by way of West Berlin, its only other showing. Lufthansa, Pan American World Airways and Schenker AirTrans have all helped that tour along, but this London showing has only been made possible by a grant from the American Express Foundation. The Government's indemnity too should not be overlooked, for without it insurance would be prohibitively expensive. We must accept the realities of the times we live in, and can only be thankful that such treats as this are still allowed us. The exhibition has been beautifully installed, and remains on view until November 18.

everyday matters, occasions and affairs—a tendency already well established by Palamedesz's time, with a parallel development of interest in landscape and topographical painting as such—it also carries with it a gentle but quite unnecessary hint of apology and deprecation, as though to say these things are fine enough in their way, indeed masterpieces of their kind, but only of their kind. Even the greatest of the artists are not untouched by the imputation: Vermeer, for example, as much a master for his rarity as the quality of his work, and de Hooch and ter Borch shown here almost with an air of surprise at their critical elevation.

Contemporary commentators were perhaps right to use less general, more matter-of-fact descriptions; and guard-room, bordello and ale-house scenes merry company and peasant kermesse certainly convey just as well the characteristic subject of those artists' view across the social spectrum. The best paintings to come out of the pre-occupation needed no special pleading to justify their standing against all comers, and masterpiece is in so many cases the proper word. Other difficulties follow upon

the first. All categories, however useful, are to be mistrusted, for they can so easily close their material in too much; and here we must not allow wonderful concentration of the exhibition to blind us to the extraordinary variety within the work, or make us forget its wider context and implication. Admittedly an attempt has been made to broaden the scope of reference, with a nod here to Hals, there to Italian influence through the *Caravaggisti* of Utrecht and the *Bamboccianti* groups of Dutch artists who all worked in Rome; but the age of Vermeer and de Hooch was also the age of Rembrandt, with Rubens and Breughel not so distant, and the wider, older Dutch and Flemish tradition can hardly be overlooked.

To have moved too far that way would have meant a very different exhibition, but with naturalism so essential to the very definition of "genre," and with so much of the work, for all its secularity, carrying with it nevertheless a palpable morality, the relation to the great tradition of earlier Flemish painting to be kept very much in mind. It was a tradition of intimate religious

Vienna Philharmonic/Albert Hall

Max Loppert

The second of the foreign orchestras to visit the 1984 Proms gave this weekend two concerts: Viennese-Classical in content and classically shapely in form—symphonies by Mozart and Bruckner in Saturday's programme, and by Beethoven and Schubert in Sunday afternoon's. At the second, the huge audience welcomed the orchestra with cheers at the start of both halves not just for leader and conductor but for all the players as they filed in. This was a special Prom gesture to one of the world's small handful of great orchestras; it was not a matter of sentimentality as the performances then bore out, for the playing of Beethoven's Fourth and Schubert's Ninth showed that some special gesture of recognition had been no more than proper.

The sound of the Vienna Philharmonic in Beethoven and Schubert confers meaning, as it were, on its own. The size of the string forces that the conductor, Claudio Abbado, had chosen for the Fourth may have been large by the latest standards of reckoning such things, yet since each line was delivered with total unanimity

of spirit as well as of notes, there was a lightness about the music-making that was authentic in the strictest sense. Every thing sang, in tones of wonderful sweetness, never cloying; one found oneself listening to the punctuation points of the argument almost as hard as to the main clauses, for almost all the notes were given their full weight. (When they didn't—the first horn made an erratic showing, the tone of the oboist was pinched and narrow—even that acted as a standard of measurement for the excellence of the rest.)

Zemlinsky/Albert Hall

Arthur Jacobs

Henry Wood introduced Schoenberg (the Fire Orchestral Pieces) to the Proms in 1912: it seems strange that only now are we discovering his teacher and, as the history books are happy to point out, brother-in-law. So swift has been Zemlinsky's recent rehabilitation in Germany that the distinguished critic Horst Koehler has proclaimed a danger of his "over-exposure" there. We in Britain have still some considerable sampling to do, and the cordial reception of Zemlinsky's *Lyrical Symphonies* by Friday's Prom audience will no doubt encourage future hearings of this beautiful late-Romantic orchestral song-cycle.

On Lorin Maazel's recording of the work, that powerful perfection in the singing of Dietrich Fischer-Dieskau. Only a lightweight substitute for that (even if allowance is made for the awkward vocal conditions of the Albert Hall) was provided

by the American baritone, Dale Duesing. But Elizabeth Connell's voice, delicately radiant strength in full croon and could hardly have been bettered for her role.

Antigone Legend/ICA

Andrew Clements

MusICA ended its 1984 season on Saturday and Sunday with performances of Frederic Rzewski's *Antigone Legend*. The puppeteer Caroline Astell-Burt depicted the action of the play by means of transparent puppets, manipulated on sticks, which were back projected onto a screen. The characters were given contemporary caricatures—Creon as the inflated dictator of a banana republic, the elders as bowler-hatted gentles, the doves of peace as a duck riding a bicycle—and the puppetry was fluid and imaginative. But it was nevertheless the sustained intensity of Rzewski's music which caught the attention.

Richard Gilbert, a 26-year-old student at Chelsea School of Art, is the first-ever winner of the £10,000 Barclays Bank Painting Prize for post graduate art students. Britain's most valuable competition for young artists.

It is a brave mixture, but one which determinedly holds the concentration for the entire span of an hour. The climaxes are fierce and cogently presented; the tension is heightened at these points by vocal sounds from the pianist, and by a variety of percussive effects in and around the piano. For the vivid impression a good deal of the credit must go to the performers, Linda Hirst and Ursula Oppens, superbly committed, dramatically precise. It was a tour de force of stamina as much as of virtuosity, and both met the exacting standards quite splendidly.

Chelsea art student wins Barclays Bank painting prize

Edinburgh in London

Richard Gilbert, a 26-year-old student at Chelsea School of Art, is the first-ever winner of the £10,000 Barclays Bank Painting Prize for post graduate art students. Britain's most valuable competition for young artists.

The winner of the 1984 Perrier Award for the best revue/cabaret on the Edinburgh fringe is The Brass Band, a group of five musical clowns from San Francisco. They will appear for two weeks, starting on September 17, at the Donmar Warehouse in Covent Garden. For four weeks the Donmar is presenting the best of the fringe, including Fascinating Aida, Hull Truck, Fergus Early and Still Life.

Czech music by a Swiss lakeside

Not even Salzburg or Edinburgh can beat Lucerne as a festival setting, the lakeside city wildly picturesque without affectation, blazing with flowers, cinged with spectacular mountain crags no more often veiled by mist than those of the rival sites. In any case a lake journey by steamer on a still day with the steep sides composing and recomposing through the aliver haze as if painted in with Chinese brushstrokes, is a soothing experience. Lucerne does not know of the struggle for meals which (vastly different as the end-products may be) one dreads in the Austrian and Scottish centres. The Swiss have adapted to modern conditions of reduced staffing. There is no meanness or muddle but a warm welcome and expert efficiency. Programmes are more limited. Since there is only one modest symphony, choral and chamber concerts is rarely interrupted by opera, drama or dance. But the big battalions keep on coming, nearly 80 years after the festival was founded in 1938 by Toscanini, among others, who would not conduct at Salzburg after the Anschluss. This year saw the Philharmonic of Basel and Vienna (under Karajan and

Abbado respectively), the Bavarian Radio (under Davis), the English Chamber Orchestra, the Academy of St. Martins in the Fields and, not least, the Czech Philharmonic under Václav Neumann. If that's what you want, there's any amount of it.

Czech music was one of the themes this year, with Smetana, Dvorák, Janáček and Martinu. But together with genuine internationality, Lucerne cultivates things nearer home—in the present case the work of Frank Martin, who died ten years ago. Martin's *Mystère de la Nativité* was a commission from Radio Geneva, first given there in concert form in 1959 under Ansermet. Salzburg staged the work with great success the following year in a production by Margherita Wallmann. Martin took his text from the early parts of the long Passion Mystery by Arnoult Flebaun, a 15th century organist of Notre Dame in Paris. For stage purposes the medieval three-level Hell) is used. For this single

(without his vagueness of outline). The Devil doesn't have the best tunes but he has by far the most advanced harmony—the treatment of Satan, Lucifer and company is grotesque-comic Harmonic contrast, between unison and polyphony, different textures and different degrees of stridency, is most adroitly used in the vocal writing. Martin had the gift of genuine simplicity, as in the beautiful double chorus preceding the appearance of Mary and Joseph. Roderick Brydon, newly-appointed music director at the Lucerne Stadt-theater, conducted the orchestra of the city's Musikgesellschaft and a large chorus drawn mainly from the Lucerne and Zürich Conservatoires. Choir and orchestra had been thoroughly prepared. So had the staging: it seemed a sad waste to have only one performance. Solo singing was com-

Toga Mura Festival/Japan

Marie Myerscough

Eight hours away from Tokyo by train, minutes drive from the nearest railway station and high above the Japan Sea, Toga Mura is a remote mountain village beyond which the dirt track road finally peters out. For years, its sights and sounds had been mostly natural—rivers, cicadas, river and stream waters, and the gleam of fireflies among the rice plants. Even the human presence had dwindled, and the name had begun to disappear from all but the most detailed maps.

But for the last three years new notes have been evident, for Toga Mura has become the somewhat improbable home of the latest Japanese international arts festival. It is the handwork of Tadashi Suzuki, Japan's most important avant-garde theatre director, who has long lamented the modern Japanese tendency to abandon the countryside and who had been looking for a remote spot in which to establish an international village for performers away from big city distractions.

Toga Mura filled the bill because of its quietness and beauty and because he wanted to show how, in collaboration with the architect, Arata Isozaki, the traditional environment, with steep, thatched-roof farmhouses, could be put to contemporary artistic use.

traced some notable international theatrical names—Zoussou Mantor, Robert Wilson, Shuji Terayama, Meredith Monk and JoAnne Akalaitis, Britain's Welfare State International (Chizuko Suguru, Hiroko Takahashi and Ayako Watanabe) were depicted as a single entity, often clinging to a symbolic centrally hanging rope. The play was divided into three clearly defined sections: the birthday and the waiting for Verahinin, (played by Haruo Tabayama), which was portrayed as a reinforcement; the group breakdown, reinforced by disintegration of the set, surrealist images and movement; and the departure and the end of illusion, which was given religious overtones and which included a Kabuki-like finale with streams of rice cascading over the sisters.

A warrior play based on a 13th century incident when the son of a victorious clan leader was ordered by his father to burn down local temples, it depicts the wanderings of his guilt-ridden soul. The second manifestation of the ghost in full Noh robes and off-white mask was splendid by moonlight, the natural light and shadow perfectly evoking the inherent mysterious atmosphere of Noh.

Opera and Ballet

ROYAL OPERA, Covent Garden: Andrei Serban's new production of Turandot has two title-role singers (Gwyneth Jones, Ghena Dimitrova), two Cabals (Ernesto Versneli, Nicola Martinucci), and two conductors (Colin Davis, John Barker) on show at different performances: Helen Donohue's *Lio*, at least, is a constant. (240 1069).

English National Opera, Coliseum: The first new production of the season is a brilliant and daring choice: Janacek's *Ondra*, until recently his black sheep among operas, now beginning to be recognised, even in its slightly incoherent shape and form, as one of his most startling ventures. *Ondra* (produced by David Pountney) comes in a double bill with Welles's Mahagonny Sooga (produced by Keith Fisk). (See separately the Flying Dutchman revival, with Josephine Barston and Neil Howlett, and The Barber of Seville. Sadler's Wells: Northern Ballet arrives on Tuesday with a small-scale Sleeping Beauty.

but as conductor in Berlin. Orpheus and Eurydice is perfectly cast with Florence Quivar, Lucia Pescoc and Carol Malone. Die Lustigen Weiber von Windsor features Norma Sharp and Helmut Berger-Tuna. Fidelio, a Jean-Pierre Ponnelle production, has Peter Hofmann as Florestan (3281).

Hamburg, Staatsoper Boris Godunov, produced by Kurt Herzer, with Kurt Moll in the title role. Obello is of respectable standard. Madame Butterfly has Raina Kabaivaniska in the part of Cio-Cio San (35115).

Frankfurt, Opera: A new production of Eugen Onegin, produced by Alfred Grohne. The cast includes Benjamin Luxon, Helena Döge and Margit Neubauber. Cav and Pas has Elena Obratsova as Santuzza. It is conducted by Giuseppe Patane. (25821).

NEW YORK

New York City Opera (New York State Theatre): Lotfi Mansouri's new production of The Alibi conducted by David Stahl with Elizabeth Hynes alternating with Claudette Petersen takes up most of a week that also includes the premiere of The Rake's Progress in a new production designed by David Hockney, conducted by Christopher Keene and star-

A balanced Cabinet

FIRST JUDGMENT of Mrs Thatcher's Cabinet reshuffle and her naming of the new British Commissioners to the European Community must be that she has mixed imagination with caution. Two of the major appointments at least are to be welcomed unreservedly. Mr Douglas Hurd becomes Secretary of State for Northern Ireland and the Earl of Gowrie joins the Cabinet as Chancellor of the Duchy of Lancaster. Both would seem to have the thorough approval of Viscount Whitelaw, the Deputy Prime Minister. The more liberal strand in the modern Tory Party is clearly being preserved at a high level.

Once Mr Prior declared his readiness to leave the Northern Ireland office, there was always bound to be intense speculation about his successor. The appointment must give some indication of the sort of policy that is likely to be pursued in future. Mr Hurd was closely associated with Mr Edward Heath when he was Prime Minister, and must have had something to do with the attempted Sunningdale settlement a decade ago. As a former diplomat he was always most at home as a minister at the Foreign Office, yet his recent spell at the Home Office must have given him some experience of matters not irrelevant to Ulster. He is also an economic "wet" and Viscount Whitelaw has argued for some time that he should have been in the Cabinet before now. It thus cannot be said that Mrs Thatcher has been ridding herself of ministers with whom she does not always see eye to eye. Balance in the Tory Party is being kept.

More fair

The same goes for the promotion of Lord Gowrie. He was extremely close to Mr Prior when the latter was Secretary of State for Employment and later in the Ulster job. Recently he has been a prominent government spokesman in the Upper House, including on economic policy, though his inclination again is on the "wet" side. Between them these two appointments probably strengthen the Cabinet and give it more fair.

At least one other appointment is intriguing. The intro-

duction of the Cabinet of Mr David Young, previously the head of Maopower Services Commission and not a politician as Mr Young undoubtedly is. The Government should now have a troubleshooter at a high level, able to look out for banana skins such as GCHQ.

Computer age

It is right, too, that Mr John Gummer should no longer have departmental responsibilities as well as being a junior minister as well as how to pilot a Bill through the House of Commons. He should be free to get on with the task which he has already begun, of reorganising the party at the constituency level and of bringing it into the computer age.

An early test for Oftel

EVEN BEFORE a majority of British Telecom's shares is offered to private investors later this autumn, the organisation has presented Government with a communications policy with a difficult early test of the priorities which should apply once it is privatised.

BT's case for the project rests firmly on commercial pragmatism. Since more than half its own subscribers already use IBM computers, it makes sound business sense to cater to them by allying itself directly with IBM. After all, has the Government not urged BT to be more responsive to customer needs?

Opportunities

In deciding on the request, Whitehall may have to make a fine judgment between what constitutes the legitimate exercise by BT of its new-found commercial independence and the broader objective of promoting maximum competition in the telecommunications market.

Unfortunate

There are undoubtedly elements of special pleading on both sides of the argument. But it also raises many questions—both about the implications of the specific project and about the wider aims of telecommunications policy—which deserve careful study.

Prof. Carsberg

Prof. Carsberg has promised to be scrupulously independent and to encourage open and informed debate. This is an excellent opportunity to put those pledges into practice by delivering an impartial opinion based on thorough analysis. Whatever his recommendation, he can at least usefully throw some light on aspects of Government telecommunications policy which have so far remained unclear.

"THE IMF and the World Bank are like the surgeon and his physio-therapist. Both are equally necessary to help the patient recover his health," says Jose Botatozo Goncalves, a top Brazilian Planning Ministry official.

The analogy is an apt one in the case of the ailing Brazilian economy. It underlines the extent to which this country, with its \$100bn debt and severe domestic adjustment challenges, is dependent on the continuing support of the World Bank, especially once the IMF's scalpels have done their work.

And it brings into sharp focus a player in the international debt crisis whose role may have appeared fuzzy to outsiders but which, at least as far as Brazil is concerned, has been just as influential as that of its neighbour across the street in Washington.

In reality, behind that fuzzy image World Bank officials have been just as tough as their counterparts: extracting long sought policy concessions from Brazil with little of the opprobrium the IMF has to put up with, and much public credit for helping out at a time of crisis.

On Brazil the two physicians have been working together remarkably closely over the past two years, much closer than either has publicly recognised.

A key board meeting of the Bank's executive directors last November spelt out clearly the demarcation lines: the IMF would concentrate on demand management issues while the Bank concentrated on the supply side, including the broad questions of growth and development.

Information has been freely shared between the two institutions. Thus, when the logjam between the Figueiredo government and the IMF over a new letter of intent a year ago was at its most serious, it was the World Bank which played a central role in disentangling the two sides and averting what would have been a very serious crisis for the international financial community.

As part of the financial package then being assembled—the basis for this year's return by Brazil to greater financial stability—the Bank made available two big loans totalling \$655m, which broke new ground for the multilateral institution.

But coping with Brazil's liquidity crisis as opposed to bankruptcy, as the situation was viewed by Mr Tom Clausen, the Bank's president, has also wrought changes in the opposite direction. The changes have been applied particularly to the way the Bank administers its lending programme in the borrowing country.

One instance of the kind of change introduced by the experience of dealing with heavily indebted countries is the idea of the co-financing scheme now being promoted for all its worth. Earlier examples were the structural adjustment loans, dating back to 1980, and the two-year Special Action Programme launched last year.

Structural adjustment loans have so far been made available to 16 countries, ranging from Turkey to Kenya, and are judged a great success. The \$2bn SAP, meanwhile, has provided a counterpoint, by releasing funds for quick action projects affected by cash flow problems in the countries concerned.

In the second half of last year—the opening months of the programme—Brazil swallowed up two-thirds of the loans handed out to 35 countries.

Given the extent of its dependence on Mr Clausen's goodwill, imagine then the general surprise last month when Brazil told its benefactor it did not want to accept a major co-financing scheme already lined up between the World Bank and commercial lenders. In effect, Sr Antonio Delfim Netto, Brazil's economic chief, told the World Bank president that it would take a wrench out of the IMF's hand.

Explanations for the abrupt about-face are hard to come by in Brasilia. But the best explanation is that this is only a tactical retreat. Brazil is watching closely the negotiations between its fellow Latin Americans—Mexico, Venezuela and Argentina—and has stated publicly that it aims to do better than them when its own negotiations commence next month.

Sr Delfim is obviously anxious to avoid getting boxed into terms with Brazil's commercial creditors which, although they may appear relatively generous at this stage, could be improved on later in the year.

Significantly, on returning home from Washington Brazilian officials also let it be known they were unhappy with the scale of policy changes being demanded by the World Bank in return for the co-financing loans. These reforms include a major liberalisation of import controls.

The arm twisting had encountered some tough resistance, and for the moment stalemate reigns. Despite the setback, Brazil's rejection of the co-financing scheme—which would have brought in \$250m in World Bank money alongside U.S.\$1.75bn in commercial loans with "capped" interest rates—is unlikely to do any permanent damage to the relationship. The links are too important for that to happen.

Long before the debt crisis erupted, Brazil had been the Bank's most important borrower (excluding loans conceded by its concessionary arm). As of September 1983—"Black September"—when Brazil's reserves vanished—the World Bank and the International Finance Corporation, its subsidiary, had \$2.4bn in loans outstanding to Brazil.

From that landmark date onwards there has been a strategic jump in the level of bank lending to Brazil, as well as qualitative changes in the type of loans provided.

Sectoral, as opposed to project, loans have become the norm, with precise disbursements to end-borrowers left up to the central bank or the Federal Development Bank, and for the first time, macro-economic conditions have been linked to the loans. Implementation of the policy changes is monitored regularly as the loan is disbursed, in classic IMF style.

Mr Clausen has personally pushed for all these changes, often in the face of unease from some Bank directors at the extent to which the institution is straying away from its original development creed towards the market, rather than to control waters of balance of payment support.

The figures show the enormous extent to which Brazil has benefited: in the fiscal years 1982 and 1983 alone Brazil will have received over \$2.5bn from the World Bank, more than the entire amount disbursed before the crisis began. The FY 1985 programme will add at least another \$1.5bn.

Traditionally, Brazil has absorbed about a third of all the Bank's lending to Latin America. That percentage has now gone up to half.

Mr Tom Clausen, World Bank president. Steel plant construction (above) is typical of the projects funded by the Bank.

Why the World Bank has poured money into Brazil

By Andrew Whitley in Rio de Janeiro

At a time when the World Bank's resources have come under unprecedented strain, it is evident that for broad political reasons advanced by the Reagan government, Brazil has been favoured over other needy borrowers.

The Figueiredo government readily admitted it has been fortunate to have had Tom Clausen as bank president at this particular time, rather than his predecessor, Robert McNamara, who took a much more traditional view towards the role of his institution. In contrast, Mr Clausen proved agreeably ready to listen to Brazil's arguments for sectoral loans. And he was prompt to act last year when that country's foreign exchange need was at its greatest.

Because of its long-standing involvement with Brazil, the Bank knew it had an important responsibility to help block the gaping breach in Brazil's balance of payments. "The challenge is to play a calm and steady role in helping Brazil weather its short-term international financial difficulties," a board meeting concluded. Within the scope of a large, pre-set figure for commitments—a target to be filled—programmes were therefore advanced, new areas for lending discovered and loans "front-loaded". The straightforward aim has been to pump as much hard currency into the system as possible, as fast as possible. An ironic side-effect of this "fix" is that Brazil now cannot take any more dollars as their conversion into cruzeiros at the much devalued exchange rate threatens to burst the IMF's money supply corset around the economy.

Another consequence, of which relatively little thought is being given is that the Figueiredo government has benefited disproportionately from the "frontloading" and will be leaving its successor, which takes over next March, to redress the balance. Whether the Bank will, in the end, be able to ensure that Brazil restores the originally agreed ratios between hard currency and local counterpart funds when the loan matures is very much an open question.

In the meantime, though, the Bank seized the opportunity presented by the country's need for hard cash to try and re-channel state spending in new directions.

Its main concerns in Brazil have long been the country's restrictive trade practices and the enormous waste of resources resulting from subsidised agricultural credit. Its economists calculated that in 1982 subsidised farm credit had cost the treasury over \$5bn, the equivalent of 6 per cent of Gross Domestic Product.

Without doubt, the Bank's greatest success to date has been in persuading Sr Delfim to do away with these subsidies and free agriculture prices. Subsidies are now being phased out over a three year period, in a process made much less painful for the farmers by the simultaneous raising of support prices and freeing of controls.

In consequence, over the past year agricultural prices in Brazil have risen much faster than the general price index and have been a principal reason behind today's record inflation rate. Currently, the Bank is also setting its sights on reforming the ambitious alcohol fuel programme and on bringing greater efficiency to the development of the north-east, Brazil's most backward region. The results so far have been mixed: progress has been slow in the alcohol programme, where export restrictions are now being eased, but very good in the north-east.

Another coup for the bank's staff, although one they do not trumpet too loudly, is the way in which they used their muscle over the energy sector successfully to cut down to size Brazil's overblown nuclear power programme. Much harder, on the face of it, is the justification for the \$352m the World Bank has already lent Brazil under the heading of "development financing": financing imports under a "drawback" scheme designed to aid manufactured exports.

In recent years, World Bank money has found its way deep into the fabric of Brazilian daily life: building roads here, financing land reform there, providing capital for small industry. It is often replacing cruzeiros made scarce by the Government's commitments to its other paymaster, the IMF, and performing functions which would normally be those of the Government itself.

How much longer the Bank can maintain this high profile in Brazil, especially after the IMF programme expires in 18 months time, is a question it finds uncomfortable to answer.

How and when should the patient be weaned off his medicine? And how much longer should Brazil be treated as a special case, when its powers of recovery on its balance of payments have recently proved so strong? Brazilian Government officials are realistic enough to know that their "take" from the Bank cannot go on for ever at this level. Nevertheless, they would close for the day bringing deliveries of share and bond certificates to a stop.

"A very unusual situation," says an official of the Investment Dealers Association, noting the Pope has chosen to arrive on the day that C\$3.5bn of treasury bills are due for redemption. For the first time in history (except for public holidays), the Bank of Canada has agreed to move its weekly treasury bill tender to a day other than a Thursday. This week, the trend setting bank rate will be fixed on Wednesday and the bank will accept post dated cheques for treasury bills.

Clearing and settlement dates for money stock and futures market transactions have been shifted to make September 14 a "no-day."

Police, the journal of the Police Federation, reports that a memo has been circulated to the Nottinghamshire force — "Some shirts bearing the word Rentokil may inadvertently have been dispatched from stores in the current shirt issue..."

It's the real clothing

If marketing is what business is all about in the modern consumer world, then Mohan Murjani is bidding to be one of the greats.

He has secured the rights to use probably the best known brand-name in the world—Coca Cola, in case you are guessing—on clothing.

A chain of 2,500 stores across the U.S. will, it is planned, retail a range of clothing and other goods carrying the Coca Cola logo.

Murjani says modestly of his new marketing concept that "it's impact will dwarf any previous happening in the apparel industry, including the last one, the launch of designer jeans.

On that subject he knows what he is talking about. He actually invented designer jeans, and in the process he discovered the remarkable power that a brand name could possess.

He emphasized the signature of Gloria Vanderbilt on millions of American bottoms.

A dapper Indian whose father moved to Hong Kong in 1950, Murjani joined his father's garment-making firm in 1967 when he was 21. His first job was as managing director of his father's business had diversified into banking and real estate in the Far East. Murjani junior decided to re-focus upon clothes and to attack international markets—particularly the U.S.

With Gloria Vanderbilt jeans sales of \$20m in 1976 to \$150m in 1980, and are now running at around \$350m.

Currently Murjani is dividing his still privately owned company into five profit centres with the aim, he says, of creating the world's largest branded apparel company. His forecasts with that same modesty noted earlier, a turnover of \$5bn by the year 2000.

But not all Murjani's operations go smoothly. In Britain he ended a two-year Gloria Vanderbilt agreement with Courtaulds early this year and opposing claims are still outstanding in the courts.

Midland motors

Midland Bank, it must be said, has been in the wars lately; not least with Crocker National Bank, its California subsidiary.

None the less, it can hardly be accused of failing to seek out new blood.

Its success in poaching Frank Fitzpatrick, unlikely though it seemed, from the post of BL finance director to head the bank's group planning is the latest in a string of appointments which suggest Midland still has pulling power.

Although BL would scarcely seem the obvious hunting ground for a major clearing bank to pick up talent, another new Midland acquisition is Michael Julien the group finance director. His last

Men and Matters

birth was at BICC but he knew Fitzpatrick when they were both at BL. Julien is currently deploying his sharp financial wits trying to repair the damage at Crocker.

In the past six months alone, Midland has absorbed \$175m in Crocker losses. Then there is Ernest Brutsche, an American and Hervé de Carnoy, a Frenchman, both big flyers on the international banking circuit who now head, respectively Midland's treasury and international divisions.

And only a few months ago, Dudley Nigg, a senior partner at Deloitte, took over group audit on a three-year secondment.

True to his tight-lipped reputation Fitzpatrick was keeping mum about the move yesterday. But having weathered the last ten years at Leyland, raised £2bn, in government support in the Michael Edwards era, arranged £27m in bank lines, and finally masterminded the Jaguar sell-off, the motor trade must have lost some of its novelty for him.

The merchant bank is Robert Fleming. It has started making a market in 22 electrical shares. Sir Nicholas Goodison, stock exchange chairman, has also openly attacked the Fleming move.

All of which makes a recent issue of the Stock Exchange Daily Official List surprising reading. It carried a proud

advertisement from Robert Fleming announcing the establishment of a UK securities trading desk. "It just goes to show what a democratic place this is," says an official.

Pope moves markets

The Pope's movements are normally of little concern to North America's financial markets. But Toronto securities dealers are moving heaven and earth to accommodate His Holiness's visit to the city later this week.

Canadian financial markets will barely operate on Thursday as trade in central Toronto is disrupted by the crowds expected to watch the Pope's procession through the city.

pledge to increase indirect and direct taxes and the income is that from 1980 to 1985 indirect taxes as a percentage of general government receipts will have progressively fallen from 39.5 to 35.0, whereas direct taxes have risen from 36.5 to 37.4...

The product life cycle

From Mr M. van Mérdog Sir— I agree with much of what Mr Rex van Rossum says in his well written piece on the theory of life cycles pure humbug (August 23). I disagree with him that the product life cycle concept is humbug. Our disagreement is along the lines of the "half full" versus "half empty" argument...

to replace existing products or to bring about innovations in the present product offering. Mr van Rossum nearly lost his job when he queried the life cycle stage of wheels. Wheels have not come to the end of the cycle, but wooden wheels have, timepieces from a growing market are dying, canned, audio/visual entertainment is buoyant but cinema's are in decline...

Risks and portable pensions

From Mr C. Wilkinson Sir— Mr Basche (September 5) raises some interesting questions and if the points he makes are true then they are an indictment of the present state of most pension schemes. But it does seem to me that the views expressed are not widely supported...

margin. As to "outside" additional voluntary contribution schemes enabling pension shortfalls to be funded at a lower cost—it is difficult to see how this could be so. The commission and expenses of such arrangements are likely to be higher than under a group arrangement with the obvious effect on the return for the member...

Curbing an aerial outrage

From Mr J. Cooper Sir— The report on acid rain (September 7) by the Commons Select Committee on the Environment reveals yet again how backward environmentally this country is compared to our European neighbours. The Government continues to prevaricate about the need to control sulphur dioxide, nitrous oxides and hydrocarbon emissions despite the growing international consensus about their effects in promoting acid deposition...

suspices of the Royal Society which was initiated last year. On the balance of all the available evidence the Select Committee has concluded that retrofitting of desulphurisation equipment to power stations must begin immediately if this country is to join the "club" of countries committed to a 30 per cent reduction of their SO2 emissions between 1980 and 1993...

The futures industry

Now it's a question of survival

By John Edwards, Commodities Editor

Conti has, perhaps, suffered more than many since the attempt by Nelson Bunker Hunt (left) to corner the silver market and the subsequent debacle

SHIVERS of apprehension are running through the world futures industry following the news that Refco has acquired the major assets of ContiCommodities, one of its leading rivals.

Refco has already made a name for itself in the industry as an aggressive organisation with considerable financial muscle. Any strengthening of that muscle is seen by some competitors as threatening, particularly as futures brokers are having a rough passage.

After a long period of expansion, futures brokers are finding it difficult to generate sufficient extra business to earn reasonable profits. The boom years are gone. The watchwords are no longer expansion and prosperity, but consolidation and survival.

Futures markets were originally developed to provide insurance against unpredictable price fluctuations for producers, consumers and traders wishing to deal for forward delivery of commodities. More recently, financial futures have extended the same protection to the money and stock markets.

Already Merrill Lynch, the biggest broker, has cut its futures activities drastically on both sides of the Atlantic. Other companies, too, which had built up staff and overheads are cutting back. Yet others are seeking protection by merging with big groups in other financial areas, notably stockbroking.

One difficulty has been the ending generally of negotiated commissions; another, the rise in interest rates. Commission houses were once able to make extra income by earning interest on clients' margins and deposits. However, the higher interest rates, and the entry of bigger and more sophisticated investors into the markets, has made clients more insistent on being credited with interest.

At the same time, costs of high-tech machines, and staff to work them—essential for futures brokers to remain competitive—are running high. So cuts have to be made by all but the most successful.

Conti has, perhaps, suffered more than many since the attempt in 1980-81 by Nelson Bunker Hunt, the Texan oil billionaire, and his associates, to corner the silver market and the subsequent debacle. Conti was a protagonist in the drama, and its parent company Continental Grain had to provide about \$100m of extra capital for Conti.

Mr Michael Fribourg, head of Continental Grain, has since made no secret of the fact that

he was prepared to sell Conti at the right price. A deal was very nearly struck last year with Paine, Webber, the big Wall Street brokerage house, but broke down at the last moment over who was going to be liable for meeting any outstanding law suits against Conti—mainly as a result of the silver debacle. When no other buyers emerged it looked as if Continental Grain was prepared to soldier on and back efforts to restore Conti's reputation. However, the company was dealt two further blows. Two separate arbitrage programmes (trading in different markets to take advantage of price discrepancies) in the company's branch offices in New York and Houston, went wrong.

There have been several legal actions against the company, accusing it of manipulating the market or losing clients' money, including one on behalf of a \$200m Middle East investment fund that was eventually settled for an undisclosed sum. Refco and Mr Dittman are both treated with some caution by some of their competitors. In 1981 in an effort to expand internationally Refco appointed two highly experienced futures traders, Henry Maringer and George Lamborn, as co-chairmen of Refco International Futures. They both left amid recriminations and law suits last year, with Mr Maringer going to ContiCommodities. Since then, Refco has tended to concentrate its activities on the U.S. markets. It is estimated that if all the Conti business was retained, Refco would be responsible for nearly 20 per cent of the total clearings on the American futures exchanges.

One of the most important things to consider when buying a truck.

Selling it.

As long as a truck keeps its running costs down, it'll keep its resale value up. So the truck you buy should be researched, designed, developed and made to the most exacting standards created by men, computers and advanced technology. A Scania is. And tested to meet the world's most demanding safety regulations. A Scania is. And totally built to run reliably on and on—day in, day out, year after year, with maximum efficiency, minimum maintenance. A Scania is. Not to mention being good enough to rate total sales and service support at home and abroad. A Scania is. So while you're initially buying a truck to do a job, remember this:

A Scania represents the best investment you'll ever make. The best return comes the day you sell it. After all, as members of the Scania-Scania group of companies, we've been making trucks for over 60 years. Today, we're one of the world's largest truck producers, selling worldwide. All of which has helped to make a Scania truck what it is today. Rugged, reliable, fuel-efficient, super strong, super safe. What's more, we're always ready to prove it. SCANIA. Whichever way you look at it. Scania (Great Britain) Limited, Tongwell, Milton Keynes MK15 8JH, Buckinghamshire. Tel: 0908 614040. Telex: 825376.

Utilities to control Ruhrkohle in final reshaping

By Rupert Cornwell in Bonn
FAR-REACHING changes in the ownership of Ruhrkohle, West Germany's leading coal supplier, are finally going through.

The overhaul, which was approved yesterday by a meeting of Ruhrkohle shareholders in Essen, is the climax to lengthy and intricate negotiations stretching over many months, in which the Federal Government has played a powerful part.

The two most important moves are increases in the stakes held by Veba, the energy conglomerate in which the Government has a 30 per cent interest, and Vereinigte Elektrizitätswerke Westfalen (VEW), the country's largest electricity supplier.

Under the complex deal, of which no financial details were released, Veba is acquiring the interests previously held in Ruhrkohle by the two steel concerns, Mannesmann and Klöckner-Werke, of 7.4 per cent and 4.7 per cent respectively. That will increase Veba's overall stake from 27.2 per cent to just under 40 per cent.

At the same time VEW, through its subsidiaries Energieunternehmensgesellschaft für Energieunternehmen (BE) and Ate Hasse, will lift its share of Ruhrkohle's DM 534.5m (\$180m) capital from almost nothing to 21.9 per cent.

That will be by the acquisition of the interests previously held in the coal concern by two other steel companies, Salzgitter and Krupp, of 10.9 and 6.2 per cent respectively, as well as of the smaller interest which belonged to the French-controlled Harpener AG.

After the reshuffle, Thyssen, with 12.7 per cent, and Hoesch, with 12.1 per cent, will remain the only steel companies to retain a financial stake in Ruhrkohle, a drastic reduction that symbolises the changing function of the coal industry in West Germany.

Like the steel industry, on which it depends, Ruhrkohle has lost substantially in recent years and reported a DM 212m deficit in 1983, when it reduced its workforce by 4,400. Meanwhile power stations have overtaken the steel companies as its most important customer for coal.

The way for yesterday's package agreement was only cleared when the North-Rhine Westphalia government dropped its earlier intention of being represented at Ruhrkohle, via the publicly-owned WestLB bank.

That followed strong opposition to such an idea by both Bonn and the Federal Cartel Office, which feared that that would allow a single-state government to exert disproportionate control over a company that owned three quarters of all West Germany's coal.

It remains uncertain whether VEW will be able subsequently to lift its stake from 22 to over 30 per cent, as at one point planned. The one remaining foreign shareholder of Ruhrkohle, Ste Nouvelle Sidchar of France, had wanted to sell its 8.3 per cent interest to VEW, but that has been opposed by the federal authorities.

For 1984, Ruhrkohle expects to shed a further 4,000 or more workers and bring down its capacity to 55m tonnes annually. It is currently spending DM 420m a year on investment to retain the ability to raise output if required, however.

Hopes fade for end to British docks dispute

BY BRIAN GROOM, LABOUR STAFF, IN LONDON

BRITISH port employers' hopes that the national docks strike was crumbling were frustrated yesterday. Dockers failed to return to work in large numbers at the Port of London's Tilbury docks - the country's biggest - despite the result of a ballot which showed that the majority wished to do so.

The Port of London Authority had announced at the weekend that 32 per cent of the 2,800 London dockers had voted to end the two-week-old strike in a secret ballot conducted by the employers. However, only 102 Tilbury dockers crossed picket lines yesterday morning and 112 in the afternoon. Normally 750 men would have been expected to work on each shift.

The port authority was disappointed, but it pointed out that the numbers working were 30 per cent up on last week and that more lorry drivers had crossed picket lines. It is considering further steps to entice more strikers back, such as providing special buses.

It was suggested that the absence of a large-scale return to work was due to the men's loyalty to their union, the Transport and General Workers Union (TGWU), which called the docks strike - the second of the year - over British Steel's alleged use of strike-breaking labour.

to unload a coal ship. Dockers had refused to handle the ship in support of the UK coal strike.

There are also fears of intimidation by pickets, although there have not been the violent scenes on the picket lines that have been a feature of the coal dispute.

The GWU also tightened its grip yesterday on other ports such as Teesside in North-East England and Great Yarmouth in East Anglia. The ports at a standstill yesterday would normally have handled 48 per cent of non-fuel seaborne trade by tonnage. That is the highest level of disruption since the strike began.

The National Association of Port Employers said 8,248 dockers were on strike yesterday (compared with 7,780 last Thursday) and 5,863 working. The employers fear that the strike might continue until the miners' dispute is settled. Although its effects are patchy, the stoppage is becoming increasingly expensive and inconvenient for companies.

There was some return to work at Bristol yesterday, when more than 300 of the 912 workers reported, many of them driving past pickets in a convoy of cars. But the number was insufficient to start work on the three strikebound ships in the port.

At Teesport, where 500 dockers were instructed last Friday to re-join the strike, only 21 men reported for the early shift and none in the afternoon.

At British Steel's Teesside terminal, the 60 dockers have stopped work. The terminal supplies coal and iron ore to Lakeney steel-works, but there is no immediate threat to the plant. In Scotland, where the dispute began at British Steel's Hunterston terminal, dockers' representatives reaffirmed support for the dispute.

Employers welcome new Paris emphasis on profits

By David Housego in Paris

THE FRENCH employers federation has given a cautious welcome to the new emphasis on corporate profitability proclaimed by M Laurent Fabius, the Prime Minister. It has also called on the Government to translate its good intentions into action.

M Yvon Gattaz, the head of the Patronat, yesterday called for a lifting of price controls and a loosening of foreign exchange controls. Speaking two days before Wednesday's presentation of the 1985 budget, he called on the Government to lower industry's costs by a more substantial reduction in the tax professionnelle - a type of payroll tax - and to provide further incentives to investment through tax credits.

The Government is already committed to reducing its receipts from the tax professionnelle by FF 10bn (\$1.6bn) next year, but employers say this will not compensate for the higher rates companies will have to pay this year.

The repetition by M Gattaz of familiar employers' federation demands barely acknowledges the change in emphasis under M Fabius. This tough attitude reflects the determination by the Socialist - despite the departure of the Communists - to the Government.

It contrasts with the more flexible position demonstrated last week by the pro-Socialist CFDT union, which has dropped some of its objections to more flexible working practices demanded by employers. Employers and unions had the first of two meetings yesterday to discuss the problems of small companies taking on staff.

In a sharp reversal of its previous position, the CFDT has waived its defence of some of the tax and labour regulations to which small companies are subject in France. Under French law companies whose workforce exceeds 10 are automatically required to pay additional taxes and provide for a delegate to represent employees in negotiations.

The CFDT has declared itself flexible on altering these regulations, which have been a deterrent to new job creation and are strongly resented by small concerns. M Gattaz called yesterday for a removal of the obstacles which companies meet in taking on staff and declaring redundancies. He said greater flexibility would create more jobs.

He also called for an easing of the regulations on part-time work, which have been frowned on in France by both the Socialist Government and by the unions. Communists informally make the break, Page 3

THE LEX COLUMN Exchange in a tight corner

The London Stock Exchange has always been torn between its public commitment to an open UK securities industry and its supervision of a central market whose members enjoy the benefits of exclusivity. The conflict between the two was at the heart of the OTF's case against the exchange and has not diminished since that action was dropped.

In criticising Robert Fleming's decision to make prices in UK electrical shares outside the central market, the stock exchange chairman has effectively abandoned the one argument which, however flimsy, reconciled these two uncomfortable positions. The time-honoured proposition that the stock exchange was simply one of a number of possible marketplaces which happened to dominate because it offered the best service at the best price could just about be supported as long as no one was prepared seriously to challenge it.

Now that Fleming has thrown down a gentlemanly gauntlet the stock exchange has perhaps not surprisingly declined to pick it up. The stock exchange chairman is quite properly concerned to prevent a fragmentation of the central market, but the way to secure this laudable objective is to lift the restrictions on stock exchange membership rather than to discourage fair competition.

The tacit support offered by the Government and the Bank of England to Fleming's move suggests that the exchange's criticism will win little sympathy in official quarters.

The profusion of deals incorporating a large option for a non-member to move from 29.9 to 100 per cent of a member firm has already made the present rules look anomalous. There seems no good reason why a relaxation of membership requirements should coincide with the introduction of negotiated commissions - indeed too big a bang on one day would not be helpful to anyone.

The longer the stock exchange delays on this issue, the more it will create the impression that members are arguing about the cost of a seat, rather than matters of real substance. The more likely explanation of the package's timing is that the Government finally succumbed last month to the spreading conviction that gold and other commodity prices were not about to rise. Lack

South Africa Industrial

prompt serious misgivings about the current trend of corporate profitability. Firm evidence of the July downturn was obviously still in the pipeline when August's deflationary measures were announced. But it might be rash to assume that the Government would have held back its package had it only been more prescient. After all, the improvement in the current account deficit was clear for all to see between the first and second quarters, while interest rates by June were already clearly curbing the consumer boom.

Lorho/Fraser

The latest in Lorho's long-running series of diatribes against the House of Fraser is probably the shoddiest and least constructively expressed of the inglorious collection. An irrelevant tombstone-like comparison of Fraser's profit record since the death of Lord Fraser with that of Lorho since the arrival of Mr Rowland - at about the same time - is the document off to a tasteless start, an impression which is not dissipated by anything that follows.

Lorho's purpose of urging shareholders to vote against the re-election of Professor Smith and his boardroom colleague Mr Ernest Sharp, is at least a consistent step in the campaign, but it is questionable whether the giving of such advice accords in spirit with the undertaking not to exercise Lorho's own votes against the professor. Nor is any argument given to shareholders to explain why they are being asked to depose Mr Sharp, although reasons for making such an extraordinary request would surely be in order.

Perversity apart, what the dispute now comes down to, it seems, is Lorho's fear that having failed to take control of Fraser, it might end up having to realise its investment on unfavourable terms.

Lorho may indeed be worried by thoughts of getting locked into a minority position while Fraser drifts into commercial oblivion and the share price dwindles, but although Fraser's performance at solving some fairly difficult problems in the last four years may have been less than brilliant, it is impossible to see how this sort of statement could do anything to improve it.

Scattered signs of progress at talks on UK miners' strike

BY JOHN LLOYD, INDUSTRIAL EDITOR, IN LONDON

TALKS BETWEEN Britain's National Coal Board and the National Union of Mineworkers (NUM) are continuing last night at a hotel in Edinburgh - with some scattered signs that progress was being made.

Mr James Cowan the Coal Board's deputy chairman and, in strictly relative terms, the most cautious of the negotiators, whose mouths have been firmly shut, admitted that the talks were going "moderately well" when he arrived for the second session yesterday afternoon.

None of the NUM's three national officials - Mr Arthur Scargill, the president, Mr Peter Heatfield, general secretary, and Mr Mick McGahey, vice-president - have commented on the talks.

Mr Scargill issued a statement in the morning from the hotel where the NUM side is staying, however, discounting a report in yesterday's mass-circulation Daily Mirror newspaper that any settlement resulting from the talks would be put to the miners in a ballot.

The statement said the NUM supported the NUM's three national officials - Mr Arthur Scargill, the president, Mr Peter Heatfield, general secretary, and Mr Mick McGahey, vice-president - have commented on the talks.

Both sides are clearly pacing the talks, taking them in two to three-hour sessions with relatively long breaks between. This contrasts with previous meetings where the talks have either dragged on for exhausting marathons or broken up quickly with mutual recriminations.

SDP on miners, Page 8

Mondale presents plan for attack on deficit

Continued from Page 1

tal bomber, the MX ballistic missile and the "star wars" programme for space-based defence.

Mr Mondale's plan still calls for an annual average real increase in military spending of 3 to 4 per cent. Over the past four years, Mr Reagan has generally sought real increases of 10 per cent or more, finally settling at the end of the congressional bargaining process for something more like 5 to 7 per cent.

His programme, however, also relies on economic growth and lower interest rates to bridge the rest of the gap, just like Mr Reagan's. The Mondale programme projects that interest rates would be down to 7.5 per cent by the end of a first Mondale term.

The new Mondale revenue-raising measures would include modifying the "indexing" introduced under the Reagan Administration, which allows income tax brackets to keep pace with inflation, and changing some elements of the third year of Mr Reagan's personal income tax cuts, which have already gone into effect.

There would be a 10 per cent sur-

Mr Walter Mondale

charge on married couples with incomes of over \$100,000 a year, and on single people earning more than \$70,000. There would be a 15 per cent minimum corporate tax on business income, and a crackdown on tax shelters, loopholes and "accounting abuses."

Australia sets terms for foreign banks

Continued from Page 1

In other measures announced yesterday, Mr Keating said the Government was lifting the rules limiting individual share holdings in Australian banks to 10 per cent, and abolishing the requirement that life insurance companies and some pension funds hold at least 30 per cent of their assets in public securities.

The Government is also waiving for 12 months foreign investment rules that require merchant banks to be 50 per cent locally owned, with no more than 60 per cent held by a single local interest. The aim is to promote rationalisation and restructuring of the merchant banking sector so as to enable it to cope with the pace of deregulation in financial markets.

The entry of foreign banks was formerly prohibited under Australian Labor Party guidelines. Mr Hawke and Mr Keating have, however, gradually weaned the party away from dogma and into almost total acceptance of their own pragmatic, right-of-centre views.

Manufacturing costs in UK grow more slowly

BY MAX WILKINSON, ECONOMICS CORRESPONDENT, IN LONDON

THE BRITISH Government's hope that the underlying inflationary trend will continue downwards was encouraged yesterday by official figures showing a 2 percentage point fall in the annual rate of increase of manufacturers' materials and fuel costs.

The figures, from the Department of Trade and Industry, showed producers' input prices rose 6.4 per cent in August, compared with 8.4 per cent in July.

This fall reflected a reduction in prices paid for food materials. The index for prices of materials paid by the manufacturers other than those in the food and drink trade fell by 0.4 per cent between July and August.

The index for materials bought in Britain's food processing companies fell 2.2 per cent. Manufacturers' selling prices rose 5.6 per cent in the 12 months to August, little changed from the figure for July.

These figures appear to confirm the evidence from the latest survey of manufacturers by the Confederation of British Industry that inflationary pressures remain subdued.

They will be particularly welcomed by the Government in advance of the retail price inflation figures for August, which will be pushed up by the rise in home loan interest rates.

This will add about 0.6 per cent to the retail price index for the month. Unwelcome though this is, it is not, however, regarded in the Treasury as being a serious inflationary worry, since a fall in the home loan rate will reverse the effect.

More worrying for the Government is the rapid rate of increase of average earnings, which rose 7 1/2 per cent for the economy as a whole last year and by a little over 9 per cent in manufacturing industry.

The 6 per cent depreciation of the pound's trade-weighted value since last December can also be expected to put some upward pressure on inflation, because it will raise the price of imports in sterling terms.

This depreciation has been reflected in the rise in producers' average buying prices, which have been rising at an annual rate of about 8 per cent in recent months.

Ministers in Rio trade talks

By Andrew Whitley in Rio de Janeiro

TRADE MINISTERS from a wide range of developing and industrialised nations are to meet privately in Rio de Janeiro this weekend for four days of discussions on the direction of world trade until the end of the century.

Among the 15-20 countries expected to be represented are the U.S., Japan, France, Australia, India and Yugoslavia. Mr Arthur Dunkel, Secretary General of the General Agreement on Tariffs and Trade (GATT), will also be present, although the meeting is not a formal GATT conference.

Publicity about the meeting is deliberately being kept to a minimum to allow the participants to address long-term issues, affecting multilateral trade, without the distraction of current problems.

The Rio de Janeiro conference is a follow-up to a preliminary session, held in Washington earlier this year, at the invitation of Mr William Brock, the U.S. Special Trade Representative.

Most of the original participants, including Mr Brock, are expected to take part again. Selection of the participants was determined according to rough criteria of geographic diversification and varying stages of development, according to a Western diplomat.

Representatives from the World Bank and the International Monetary Fund have also been invited to attend the two rounds of talks.

No formal agenda is believed to have been set. The choice of topic is likely to be influenced by the main concerns of the host nation, Brazil. Barter 'against developing countries' interest, Page 7

Ever thought of moving your business? To relocate, expand or simply survive? But where do you go? So many hopes and dreams on offer. So many brave new tomorrows. All you need is faith! In Northampton it's here and now that matters! Success measured in results! See and Believe it! Eleven days isn't long. Less than a fortnight. But since 1970 Northampton has added one new firm, 45 jobs, 48 new homes, 65 people, 6250 sq ft of shops and offices and 22000 sq ft of brand new factories - every eleven days! And more good news. Nearly 70 overseas firms from 15 countries have moved to Northampton, bringing new investment

and making this one of the UK's fastest growth points. And no wonder. Distribution is no problem when your operating base is on the key stretch of the national motorway system. Right on the M1, midway between London and Birmingham, 50% of Britain's industry and 57% of its population is within 100 mile radius. And the future? Better still. Continued growth, bigger markets, improved productivity. So forget hopes and dreams. Look at the reality of success in Northampton here and now, today. Look at proven growth, proven achievement! Success you can see! Factories from 3400 sq ft to 29000 sq ft. Rent free periods negotiable. Send for your free information pack.

Fluor sees upturn in industry despite sharp profit setback

BY TERRY DODSWORTH IN NEW YORK
FLUOR CORPORATION, the California-based mining, engineering and process plant construction company, said yesterday that it expected a steady upturn in the industry despite a fall in third-quarter earnings to \$1.9m against \$3.9m a year ago.

Vallourec to sell stake in banking subsidiary

BY PAUL BETTS IN PARIS
VALLOUREC, the leading French steel pipe manufacturer, is negotiating the sale of a controlling stake in its banking subsidiary to Groupe Bruxelles Lambert, the international Belgian financial group.

Continued growth for Heinz in quarter

By Our Financial Staff
H.J. HEINZ, the Pittsburgh based food group, continued its recent trend of profits growth in the first quarter of fiscal 1985 ended August 1, hitting net profits from \$41.5m or 67 cents a share to \$72m or \$1.06.

Apple cuts price of Macintosh

APPLE Computer has introduced an upgraded version of its Macintosh personal computer and lowered the price of the original version by \$300 to \$2,195.

Why Paribas changed its mind on Becker

BY PAUL TAYLOR IN NEW YORK
According to Mr Herve Pinet, the executive Paribas chose to head Becker 15 months earlier when the French bank bought up a 25 per cent stake held by S. G. Warburg, the London merchant bank, the decision to sell reflected several different factors.

Volvo plans to pay \$78m to boost Hamilton holding

BY KEVIN DONE, NORDIC CORRESPONDENT, IN STOCKHOLM
VOLVO, Scandinavia's biggest industrial corporation, is planning a \$78m cash offer for a further 4m shares in Hamilton Oil, the U.S. oil group, pushing its stake close to 50 per cent.

Tenneco to buy Ekco

BY OUR NEW YORK STAFF
TENNECO, the Houston-based conglomerate with interests in oil and gas pipelines, said yesterday that it was acquiring Ekco Products, the aluminium container group subsidiary of American Home Products.

U.S. CHEMICAL GROUP RETURNS TO TAKEOVER TRAIL

Union Carbide's \$300m shopping list

BY CARLA RAPOPORT IN LONDON
UNION CARBIDE, the U.S. chemicals group, is still on the acquisition trail despite its recent failure to purchase a large U.S. industrial gas group.

Table with 2 columns: Union Carbide Capital Spending, 1982, 1983. Rows include Petrochemicals, Industrial Gases, Technology, Services and Specialty Products, Other, Total Spending.

"Carbide has long had the know-how in technology, but has not been known as a hot marketer. But we have a \$2bn consumer products business, so this is something to build on."

Pfaff lifts first half performance

By John Davies in Frankfurt
PFAFF, the West German sewing machine manufacturer, boosted sales and profits in the first half of this year.

There used to be one good book that covered the metal markets.

Now there's a whole library.

With the growing complexity of factors that affect the price of metals, it has become increasingly difficult for the serious commodity investor to monitor all the markets.

Not any longer.

Shearson Lehman/American Express, in line with its own expansion, has extended its range of in-depth research publications. As a result, instead of producing just an Annual and Mid-Year Review, it will now be publishing in-depth reviews on all the major metals, updated quarterly.

These reviews will forecast future prices and trends and examine the factors that influence them, such as changes in the patterns of production and consumption, East/West trade, and international agreements. These will be supported by a series of quarterlies which will not only update the main review but also provide analysis of specific topics of interest and any market developments.

In addition, Shearson produces a widely respected Weekly Review and daily telex service which constantly

monitor the markets.

Shearson Lehman/American Express, one of the world's foremost commodity brokers, maintains its position through the service it provides. With a network of brokers and dealers all over the world and the very latest in technological sophistication, Shearson allows you to maximise on investment opportunities wherever or whenever they occur.

Like anyone seriously involved in commodity investments, Shearson needs a library of information as comprehensive and as authoritative as possible in order to know what is happening. That is why they have extended their range of in-depth and regular reports to include all the major metals individually.

All of these are manuals for those who need to know what is happening in metals.

Can you afford not to be equally well informed?
If not, just fill in the coupon.

Please could you send me a copy/copies of the following:

| Annual Review (@ £60/\$90 per copy) | Annual Review & Quarterlies (including a FREE Quarterly) (@ £90/\$140 per month) |

INTL. COMPANIES & FINANCE

Operating result at Bell Group more than doubled

BY MICHAEL THOMPSON-NOEL IN SYDNEY

BELL GROUP, the diversified Perth-based master company of Mr Robert Holmes a Court showed a 127 per cent improvement in consolidated operating profit for the year to June 30 to A\$40.54m (U.S. \$34.48m) and is again making a scrip issue, on the basis of one-for-five.

The final dividend is 5 cents a share for an unchanged total of 10 cents a share.

Mr Holmes a Court said the group had performed well across its full range of operations including the London-based Associated Communications Corporation (ACC) formerly run by Lord Louis Mountbatten.

Turnover at Bell Group was A\$440.8m, down 13 per cent. Interest paid was A\$31.31m against A\$36.78m previously, while depreciation was A\$8.94m compared with A\$9.94m, and amortisation of film and television rights, A\$33.64m compared with A\$39.08m. Other income, including investment income, was A\$28.74m.

A financial statement from Bell Resources, Mr Holmes a Court resources investment

vehicle, is expected today.

The Bell Group chairman said that the drop in turnover last year was the result of selling off unpredictable operations, like the London-based subsidiary Jetstar Travel.

Both in Australia and abroad, he said, all member companies of Bell Group were showing much stronger profits though all were operating below capacity.

What we have been doing is disposing of our extraneous assets and using the funds for those we are keeping," said Mr Holmes a Court.

Tooth and Company, the Australian group 82 per cent-owned by Adelaide Steamship company, showed a profit of A\$1.1m (U.S.\$26.4m) for the year to June 30.

The final dividend is 17.5 cents a share for a total of 35 cents a share. Last August Tooth sold its brewing activities to Carlton and United Breweries, for A\$160m which transformed it into a diverse holding company, with major investments in wine, dairy foods and property.

Caltex Australia, the oil

Sime Darby insurance merger

By Wong Sukong in Kuala Lumpur

SIME DARBY, the Malaysian plantation-based group, has announced a merger of its insurance business with the East West Insurance Group to create one of the biggest insurance companies in Malaysia.

Under the deal, Sime will transfer United Malay Insurance to EWI in return for a 50 per cent stake in the enlarged company. Sime said the enlarged EWI will have annual premium income of 70m ringgit (US\$30m), and shareholders' funds exceeding 65m ringgit.

Apart from operating in South East Asia, EWI recently acquired a subsidiary company in the UK.

Sime said the merger was in line with the Malaysian Government's desire to see the formation of a bigger insurance company capable of taking a more active role in the industry.

Sime had been actively looking to expand its insurance operations in the Far East and entered into a joint venture with the Fireman group of the U.S. in June 1982 for the purpose. However, the joint venture was terminated last April. It never got off the ground partly because of Fireman's pre-occupation with tackling its heavy losses in the U.S.

Heong Leong stops BICC share sale

By Our Kuala Lumpur Correspondent

HEONG LEONG INDUSTRIES has obtained an interim high court order in Kuala Lumpur to restrain BICC of the UK from selling a 62.7 per cent stake in Malaysian Cables to Sapura Holdings, the major Malay contractor for telecommunications.

The dispute arose from an agreement last January, under which BICC was to sell 7 per cent of its stake in Cables to Heong Leong and another 10 per cent to two individuals, including Mr Samsuddin Kadir, chairman of Sapura, for a total of 18.6m ringgit (\$7.9m) or 2.3 ringgit per share.

However, in June, BICC announced it was selling its entire stake in Malaysia Cables to Sapura Holdings for 22.37m ringgit or 2.72 ringgit per share. The deal received the approval of Malaysian authorities last month.

BICC gave no reason for not going ahead with the original deal, but it is believed it considered the agreement to have lapsed without approval forthcoming from the Malaysian authorities.

Downturn for Promet

By Our Kuala Lumpur Correspondent

PROMET, the diversified Malaysia-Singapore property, marine and oil group, has reported a 32 per cent drop in after-tax profit to 26.5m ringgit (US\$11.2m) for the half year to June. Turnover fell by 39 per cent to 138m ringgit.

No reason was given for the decline, but the group is believed to have been hit by the Malaysian recession, with subdued performances in its construction and marine engineering activities.

The directors say they expect profits for the second half to be maintained. Last year, Promet had after-tax profits of 46.5m ringgit.

Aberdare Cables cuts dividend

BY JIM JONES IN JOHANNESBURG

SOUTH AFRICA'S worst post-war recession coupled with cheap imports have combined to cut deeply into the earnings of Aberdare Cables, the country's principal electrical cable manufacturers. The company has responded to sharply lower earnings and concerns that recovery now seems unlikely until 1986 by cutting dividends to conserve cash.

Aberdare Cables, which is 67 per cent-owned by Philips Gloelampentfabriek, increased turnover to R56.6m (\$44m) in the six months ended June 30 1984 from R39.9m in the first half of 1983 but suffered a drop to R5.41m

from R5.32m in operating profit before tax and interest. In 1983 as a whole turnover was R96.3m and operating profit R10.94m.

The interim dividend has been reduced to 4 cents a share from 15 cents while first-half earnings dropped to 15.2 cents a share from 28.3 cents. In 1983 earnings totalled 71.8 cents a share from which a total dividend of 40 cents was declared.

Scottish Cables, the 45.5 per cent-owned offshoot of BICC of the UK suffered an even sharper profit decline. Its first-half operating profit before tax and finance charges slipped to

Bank of America HK issues writ

BY DAVID DOWELL IN HONG KONG

BANK OF AMERICA in Hong Kong has issued a writ against Far East Consortium, a local property company, for the recovery of HK\$97m (US\$12.4m) of outstanding loans.

Far East which is controlled by the family of Mr Deacon Chiu, who is also chairman of ATV, Hong Kong's main independent television station, said the writ had been delivered yesterday afternoon.

It follows a dispute over the speed of repayment of loans and over interest charges. Mr Robert Robertson, a manager at Far East Consortium said, Bank of America first lent to Far East in 1981. Outstanding loans reached a peak of just under HK\$140m last year, Mr Robert

son said. Loans from Bank of America account for about one-third of the company's outstanding debt.

Far East's loans have recently been rescheduled, with the Bank of America pressing for accelerated repayment. No Bank of America executive was available for comment.

Full year accounts to the end of March this year for Far East Holdings, of which Far East Consortium is an associate, are long-delayed. In the half-year to September last year, the group announced consolidated profits of HK\$84,000, compared with HK\$11m a year earlier.

Li and Fung group has announced a HK\$11m profit

Cold Storage interim profits down 35%

BY CHRIS SHERWELL IN SINGAPORE

GOLD STORAGE Holdings, the quoted Singapore group with food manufacturing food distribution and property interests, has reported a 35 per cent drop in interim profits, despite higher turnover.

Pre-tax profits for the six months to July were S\$10.7m (US\$4.95m) against S\$16.6m for the same period last year, while turnover rose 7.9 per cent to S\$395m. After-tax profits were down 40.6 per cent to S\$5.8m, and an extraordinary loss of S\$1.4m left attributable profit 72 per cent lower at S\$2.65m.

The extraordinary loss was due to foreign exchange deficits on Australian dollar loans. A similar loss last year was offset by a property sale.

Depressed trading conditions plaguing Singapore's retail

sector hit the company's operating profits, while losses by an Australian company involved in the troubled fishing sector, caused a turnaround in income from associated companies.

Shareholders are to receive an unchanged interim dividend of five cents per share, but the directors say trading conditions in the second half are not expected to improve.

General Electric of India suffers sharp setback

BY P. C. MAHANTI IN CALCUTTA

General Electric Company of India, GEC of the UK's Indian subsidiary and a leading electrical appliances manufacturer, experienced a sharp setback during 1983 due to continued recession in the power transmission field which is its major market.

Sales fell to R711m (\$61.8m) from the previous year's R721m. Both pre-tax and net profits took a sharper dip on account of various statutory liabilities that the company had to meet. The pre-tax profit was down to R46.6m from R80.8m and the after-tax profits to R17.5m from R34m.

Demand for the company's products particularly transformers, continues to be depressed, and the directors see

Bally shoemaking group bucks the hard times at Oerlikon-Buehrle

BY JOHN WICKS IN ZURICH

SWITZERLAND'S Oerlikon-Buehrle group is going through hard times. This year, shareholders went without a dividend following a consolidated net loss for 1983 of SwFr 88.7m (\$33.7m) — largely the result of flagging demand for military equipment and machine tools, combined with continued high development costs for new arms systems. But not all divisions were in trouble, as Dr Dietrich Buehrle, the chairman, has pointed out. One of the subsidiaries with "very good results," he names as Bally, the shoemakers.

Bally, second only to Clarks of the UK, in the list of European shoe manufacturers, accounts for almost all group activities in the field of consumer goods. These have become increasingly important to Oerlikon-Buehrle as its sales shift more towards "civilian" products; last year, consumer goods accounted for 26.8 per cent of consolidated turnover of SwFr 4bn (\$1.6bn), or only slightly less than the 28.6 per cent of the armaments sector.

Bally has grown substantially since it joined the Zurich-based group in 1977. Turnover rose

under the brand name "Bally Made in Italy," and makes use of some uppers and soles produced under group surveillance in countries such as Italy, Spain and, in the case of British-assembled shoes, India.

About SwFr 140m of Bally's SwFr 1bn-plus turnover comes from other products, primarily leather and chemical specialties from the Brazilian company, Cortume Carioca and the "chemical-technical" products (shoe polish, adhesives, rubber goods and acrylic glass) of the Swiss-based CTU department. The company has recently given up producing elastic fabrics in Switzerland.

The future thrust of new business is likely to be in the division's widespread retail activities. Of the SwFr 900m or more accounted for by annual consolidated sales of shoes and accessories, SwFr 600m is made up by Bally's own 388 retail outlets. This total excludes 45 franchised shops, located primarily in the Far East, France and the UK, five stores run by a Japanese joint venture and the group's minority stake

down, overhead costs were cut back radically, and the company dropped such lines as slippers, sports footwear and cheaper shoes in an effort to concentrate its efforts on the carriage trade. While some other leading Swiss shoe manufacturers failed to weather the storm, Bally soon began to straighten itself out. C. F. Bally was able to announce in 1976 that it expected to resume dividend payments and show the highest earnings level in five years; for the 1976 calendar year, a group profits figure of SwFr 25m was estimated.

However, this return to health came too late to save the company from an unfriendly takeover. In mid-1978, the board announced "large-scale share purchases by an anonymous group." In January of the following year Syndikats-AG, the Zurich holding company, backed by a group of dissatisfied shareholders, took over control. After a battle against the acquisition, a new board was voted in: only Mr Walter Heiniger, the chairman, stayed on, provisionally, at the requests of both sides.

Although the new management, controlled by Mr Werner Rey, the Swiss financier, expressed its intention to expand group business at home and abroad, Bally came in for fierce criticism in the following months. This was directed primarily at Mr Rey, the majority shareholder in Syndikats-AG, and at financial arrangements involved in the purchase and the running of Bally. After claims of asset-

stripping had been made at the company's July shareholders' meeting and Mr Rey had resigned as managing director and management chairman, he announced in September, 1977, that he would sell his stock to Oerlikon-Buehrle for an undisclosed sum.

All these fireworks blinded many observers to the fact that Bally was continuing to consolidate its operational base. The shoe concern started paying a dividend again in mid-1977, and was a valuable contributor to Oerlikon-Buehrle's earnings from the very beginning. "We have never needed a penny from Oerlikon-Buehrle," says today's chairman, Walter Kinzelbach, proudly. Against the background of a weak economy, Bally booked a record—though undisclosed—profit in 1982, and almost matched it last year. For 1984, Dr Buehrle reckons on another good showing.

Under the group's system of "co-operative management," Dr Buehrle has left Bally with a large measure of autonomy. Perhaps the most important result has been the continued emphasis on quality products. Thus, production volume has risen only slowly in comparison with turnover: shoe output went up from 3.85m pairs in 1978 to 4.3m pairs last year, and no further increase in capacity is foreseen.

Bally has its own shoe factories at a number of sites in Switzerland, as well as three each in East Anglia and France. It also buys in shoes from outside manufacturers, in Russell & Bromley of the UK.

One of the most successful national chains in the past few years has been that of Bally Group (UK) with British production and imports of Swiss-made Bally shoes both rising since 1975, the retail division has raised its turnover from £14.1m to almost £31.5m, opening 15 new shops and five leased departments in other stores.

Bally is now aiming at an expansion of the franchise network and the addition of new large shops of its own in prime big-city locations. Hitherto, the biggest Bally outlets have been "fashion stores," selling accessories, shirts, ties, watches and the like, as well as Bally and other shoe brands, in French and Swiss cities.

In future, says Mr Kinzelbach, the group is considering similar developments in New York—and also in the UK.

Fireworks blinded many observers

In the period 1978-83 from SwFr 745m to SwFr 1,030m, with a simultaneous tripling of profits. Dr Buehrle's decision to diversify into consumer goods—formerly represented by only a modest textiles operation—has proved a good one.

Ironically, Bally had been the subject of a great deal of adverse publicity immediately before the acquisition. The company, which had been in business since 1851 and was long considered a world leader in the quality shoe market, hit a sticky patch in the early 1970s. First, an over-broad production programme and an increasingly strong Swiss franc, then falling demand led to losses for the major manufacturing subsidiary Bally Schuhfabriken and precluded dividend payments by C. F. Bally, the parent company, in the financial years 1974-75 and 1975-76.

This led to a comprehensive group restructuring scheme. Two Swiss plants were closed

This is neither an offer to exchange or sell nor a solicitation of an offer to buy or exchange any security. The Offer is made only by the Prospectus dated August 20, 1984 and the related Letters of Transmittal. The Offer is not being made to, nor will tenders be accepted from, holders of these securities in any jurisdiction in which the making or acceptance thereof would not be in compliance with the securities laws of such jurisdiction.

MGF Oil Corporation

Offer to Exchange
1,532,150 Shares of its
Senior Convertible Preferred Stock
and
34,327,590 Shares of its Common Stock
for any and all of

MGF International Finance N.V.'s

Class A and Class B Non-Interest Bearing Convertible Senior
Subordinated Guaranteed Debentures Due 1989 ("0% Debentures")
8 1/4% Convertible Subordinated Guaranteed Debentures
due 1995 ("8 1/4% Debentures")

MGF Oil Corporation ("MGF") hereby offers upon the terms and subject to the conditions set forth in the Prospectus dated August 20, 1984 and in the accompanying Letters of Transmittal (which together constitute the "Offer") to exchange 1,532,150 shares of its Senior Convertible Preferred Stock, par value \$1.00 per share ("Preferred Stock"), and 34,327,590 shares of its Common Stock, par value \$0.01 per share ("Common Stock"), for any and all of the 0% and 8 1/4% Debentures (collectively, the "Old Securities"), as follows: (i) for each \$1,000 principal amount of 0% Debentures which must include a Class A and Class B 0% Debentures, 44 shares of Preferred Stock and 986 shares of Common Stock; and (ii) for each \$1,000 principal amount of 8 1/4% Debentures, 44 shares of Preferred Stock and 986 shares of Common Stock. All accrued and unpaid interest will be cancelled with respect to tendered and accepted Old Securities.

The Preferred Stock will be convertible into shares of Common Stock at the following rates: (i) through October 1, 1989, 8 shares of Common Stock for each share of Preferred Stock; (ii) October 2, 1989 through October 1, 1994, 10.8 shares of Common Stock for each share of Preferred Stock; and (iii) after October 1, 1994, 16 shares of Common Stock for each share of Preferred Stock. Holders of Preferred Stock will be entitled to receive cumulative dividends, accruing from July 1, 1987, at the annual rate of 3.15% per share, and no more, payable in cash or shares of Common Stock at MGF's option. The Preferred Stock will be nonvoting as to most corporate matters, will provide for a preferred cash payment in the event of MGF's liquidation and will be redeemable on and after January 1, 1986.

The Offer will expire at 6:00 P.M., New York City Time, on September 18, 1984, unless extended by MGF. Any extension of the Offer will be announced by press release.

All tenders of Old Securities may be withdrawn until 6:00 P.M., New York City Time, on September 4, 1984. After such time, all tenders will be irrevocable if accepted by MGF prior to 6:00 P.M., New York City Time, on October 17, 1984. All tenders not accepted by MGF prior to 6:00 P.M., New York City Time, on October 17, 1984, may thereafter be withdrawn.

The purpose of the Offer is to eliminate \$34,815,000 aggregate principal amount of Old Securities and \$130,055,500 of other indebtedness of MGF and to reduce MGF's secured bank indebtedness by \$29,578,223. MGF believes that following consummation of the Offer, it will be able to (i) remain a viable entity without the need for bankruptcy court protection and (ii) discharge its remaining debt obligations in the ordinary course of business.

One of the conditions precedent to consummation of the Offer is that 95% aggregate principal amount of each class of Old Securities must be tendered in the Offer. If the Offer is not consummated, MGF will not have sufficient cash flow to pay its debt obligations as they mature and intends to seek protection from its creditors by filing a petition for reorganization pursuant to Chapter 11 of the United States Bankruptcy Code. If a Chapter 11 filing occurs, MGF currently intends to present as its plan of reorganization a plan substantially identical to the restructuring plan set forth in the Prospectus.

THE INFORMATION STATED HEREIN INCORPORATES BY REFERENCE, AND IS QUALIFIED IN ITS ENTIRETY BY, THE DOCUMENTS CONSTITUTING THE OFFER.

The Certificate of Incorporation of MGF and a legal notice relating to the Offer have been filed with the Chief Registrar of the District Court of Luxembourg, where copies may be obtained upon request.

Officers with questions concerning the Offer may contact W. Phillip Marcum or Bobby W. Page of MGF by collect telephone call to (915) 685-9700, telex 743-472.

In order to obtain promptly, at the expense of MGF, the documents constituting the Offer, contact:

Rockware back in black but prices 'too low'

A SWING of almost £7m by its glass-making activities enabled the Rockware Group to move back into the black over the six months ended July 1 1984.

At the pre-tax level profits of £104,000 were made despite taking account of the furnace repairs which Sir Peter Parker, the chairman, referred to last March.

In the opening half of the previous year losses of £8.51m were incurred—the group's other interests are in plastics and engineering.

Although selling prices are still "too low", Sir Peter says the glass container market is stronger this year and the industry has moved into a better balance of supply and demand.

Against this background he expects group performance to show a moderate improvement in the second half compared with the first. "The turnaround is so far on course," he says.

The group remains well within its borrowing facilities despite the heavy costs of tank furnace repairs and the consequential restocking.

In glass sales volume increased over the first half and selling prices were raised again in April following an advance in October 1983.

Finished stocks were lower by 20 per cent and glass-making capacity in the industry, which was drastically reduced in 1983, still marginally exceeded demand.

The furnace repairs were completed on schedule but the group decided not to replace a ten-year-old Kootlingley furnace at the end of its natural life.

The redundancy and asset write-off costs arising from this decision (estimated at £500,000) are not reflected in the results.

Group turnover declined from £11.52m to £8.44m.

Operating profits amounted to £1.14m (£3.74m loss). Of this total, glass (including parent company) contributed £794,000, against a previous loss of £5.93m. The balance was made up as to plastics £188,000 (£134,000)—and engineering BKR £164,000 (£32,000).

The group sold its Alida plastic operations last September, which contributed profits of £283,000 in the previous half year, and closed the Kingspeed engineering interests in December where previous losses of £265,000 were incurred.

Group pre-tax results were struck after adding in exceptional credits of £563,000 (£480,000 debits). These arose mainly from a reduction in

pension scheme contributions.

Interest charges were reduced from £2.32m to £1.58m as a result of the preference share issue last autumn.

Share of associates' losses amounted to £23,000 (£47,000) and tax rose from £7,000 to £187,000 (£11,000 credits). Extraordinary items added £383,000 (took £379,000).

After preference dividend payments of £437,000 (£16,000) the loss attributable to ordinary shareholders emerged at £50,000, compared with £3.1m.

Loss per 25p share totalled 2.66p (38.55p)—the group last paid a dividend in 1982.

The plastics operations at both Norwich and Kingliff produced "fine" performances.

The rationalisation of production at the group's third factory, Golborne, took longer than expected and lowered overall operating profits of this "promising part" of group activities.

The Reading factory was closed last year.

In engineering, Burwell Reed and Kingborn and the Bristol Foundry Company held their own in a flat market.

Group pre-tax losses for the six months ended January 1984 totalled £12.83m (£805,000 pro-

Sir Peter Parker, chairman of the Rockware Group... a better balance of supply and demand

Turnover was down from £11.75m to £11.47m.

The group has closed its offices at Windsor and established the new headquarters in the office building at Northampton.

comment
It seems that with Sir

Peter Parker back in charge, Rockware's recovery is, so to speak, in train. This will be a source of much comfort to the institutions which a year ago chipped in £10m to keep the group afloat. Since then, overcapacity in the glass container industry has fallen from around 20 per cent to a mere 10 per cent, and pricing is getting back towards the realms of common sense. Capacity reduction clearly has further to go; Rockwell's own decision not to replace its 10-year-old Kootlingley furnace (eight-10 years being the normal lifespan) is a typical step in this direction. For Rockware, as for the industry, the strategy seems to consist of devoting part of the cash flow arising from non-investment in glass to further expansion in plastics. To an extent, this may simply move the problem sideways—into PET manufacture, for example. But for Rockware, a rather nasty corner seems to have been turned; the interim pre-tax loss of £450,000 (before the drawback contributions) may well be turned into a profit of £0.5m or more for the full year. But at 30p (down 1p) the shares are still looking to a more distant future.

Increased demand lifts Desoutter above £2m

ENLARGED DEMAND for its products in most trading countries has enabled Desoutter Brothers (Holdings) to report a 103 per cent rise in taxable profit in the half year to June 30 1984.

Mr R. C. Desoutter, chairman of this precision mechanical engineer, is hopeful that trading in the remaining months of the current year will continue at the average of the first eight months despite the fact that holidays in July and August have reduced the impetus a little.

The midway result was £2.12m against £1.05m, and is approaching the £2.73m made in the last full year. It emerged from turnover which rose by £2.34m to £18.53m, and is static after interest payable at £95,000 (£202,000).

The interim dividend is being effectively held at 2.16p net per share after allowing for the one-for-four scrip issue in May. Last year's total was a restated 5.6p, and the company quotes its earnings per share at 9.93p (8.97p).

UK and overseas tax absorbed rather more in the period at £820,000 against £544,000, to leave group profits of £1.14m at the attributable level, up from £502,000.

Combined preference and ordinary dividends will cost £288,000 against £267,000.

comment
The market was rather startled by these excellent figures from Desoutter, as witnessed by the 131p jump in the share price to 131p. Both sides of the balance equation are evidently working well—cost cutting on the one hand, increased volume and prices on the other. Sterling's weakness has obviously been useful—some 70 per cent of sales being overseas, and almost all of that into the U.S. and Europe—but UK sales are holding their own. To an extent, this may be a cyclical matter. The tools sold by Desoutter fall into the category of manufacturing consumables, and in the present modest upturn can be afforded by companies still fighting shy of major capital expenditure. But the jump in trading margins—down 6.4 per cent to 14.3 per cent—serves as a reminder of the group's resilience; indeed, even at their worst in 1982, margins stayed above 5 per cent. For the full year, profits should reach £4m at the very least, putting the shares—on an assumed tax charge of 46 per cent—at a multiple of little over 7 times earnings. In line with the group's practice, the dividend increase will be postponed until the final.

Low & Bonar well ahead but warns of African slowdown

INTERIM TAXABLE profits of Low & Bonar, the Dundee based packaging, engineering, textiles and travel group, were almost doubled from £2.6m to £4.15m in the six months to May 31 1984 and shareholders receive an interim dividend up 10 per cent from 3p to 3.3p net.

A higher profit will be earned in the second half, say the directors. Overall the year will show a significantly larger proportion of profit earned in hard currencies.

However, they sound a note of caution on the overall profit improvement for the year, because profits in Africa will not approach the record £2.94m earned in the second half of last year.

Operations in UK/Europe and North America now represent more than 80 per cent of both profits and turnover. Group turnover in the half year rose by 5 per cent from £86.63 to £90.5m.

After what the directors describe as a "more realistic" 41 per cent tax charge of £1.70m, compared with 66 per cent or £1.48m last year, earnings per 50p share showed a substantial increase from 4.13p to 16.78p.

At the attributable level, profits surged ahead from £507,000 to £3.45m and included an extraordinary credit of £1.12m (£94,000 debit) which principally related to the disposal of the group's 50 per cent shareholding in Bonar Long NTC (SA) (Pty) in December, 1983. The higher dividend takes £460,000 (£419,000).

The group's interim report for the first time provides more detail by function and region. It shows that the strength of UK/Europe and North America with a total turnover of £78.56m (£72.53m), and profits of £3.87m (£1.94m), North American profits rose significantly from £1.29m to £2.04m.

UK/Europe textiles, which includes the Bonar and Fiotex operation, more than doubled its profits to £1.01m (£51,000) and turnover up to £10.31m (£8.51m), is repeated.

Packaging in UK/Europe is expected to have a further increase in profitability in the second half as the main profit normally earned in the last few months of the year. All plants have satisfactory forward loadings.

UK engineering made a profit of £498,000 against losses of £279,000. The improvement was due to considerable reorganisation within transformers manufacturing. Bonar Long and improved profit performance by Bonar Breatford which operates in the electronics and related industries.

Bonar and Fiotex expects its satisfactory returns to continue into the second half. Bonar Textiles, largely in fibre production, also improved profits.

comment
Low and Bonar's 21p share price, up 3p last night, is standing at a hefty 30 per cent discount to net asset value. The reason is two-fold—the dividend cut going back to 1981 and the fact that some of this value is locked up in the company's textile businesses in African countries with severe remittance restrictions, the latter giving a historical imbalance to the geographical spread and product mix. Over the past few years the emphasis of corporate strategy towards building up other products in other parts of the world has transformed the quality of earnings, as the latest results testify, with UK and North American operations, and particularly the packaging and home-based textile activities, exceeding expectations slightly. In fact the earnings performance outweighed any disappointment on the dividend, which still has some way to go to be fully restored to the pre-1979 level. At this rate £12m pre-tax looks possible for the year, putting the shares on an undemanding multiple of just over 4 if the first half tax charge is repeated.

USM quote for Trade Promotion

By William Dawkins

ORGANISING TRADE fairs and exhibitions is the business of Trade Promotion Services Group, the latest company to announce plans to join the USM.

The Woolwich-based group plans shortly to piece about 50 per cent of its equity on the USM through the stockbrokers Margrets & Addenbrooke. It aims to achieve a market value of between £4m and £5m and raise up to £400,000 for the company.

Existing shareholders will be selling equity worth about £2m, with the biggest tranche to come from the Federation of British Jewellery and Giftware, currently owner of 49 per cent of the equity. The Federation will retain a minority stake after the placing.

Taxable profits rose from £362,000 to £552,000 in the year to April 1982, but slipped to £207,000 in the following year. Profits recovered to £315,000 in 1984, and are expected to advance further this year.

The downturn was due to the fact that the group's exhibition stand construction and fitting division was forced to bid at unrealistically low prices in a highly competitive market.

The division lost £30,000 in 1983 and was £150,000 in the red last year, including £100,000 of rationalisation costs. One of its two factories has been closed, and the division is expected to break even this year.

Micro Business profit and interim doubled

DESPITE PRESSURE on profit margins and the shortage of supply of microcomputers, Micro Business Systems reports a 104 per cent leap from £280,000 to £1.75m in pre-tax profits for the six months to June 30, 1984.

Turnover rose from £1.7m to £15.47m, an increase of 139 per cent. This figure is £1.38m higher than that achieved in the whole of 1983.

The figures include, for the first time, those of Alvernoic Computer Systems, which was acquired last December. They exclude totally any contribution from two recent acquisitions, Data Efficiency and Computer Peripherals.

The directors, in light of "this

excellent performance," are effectively doubling the interim dividend to 1p—the group's shares are traded on the Unlisted Securities Market. A final of 1.75p was paid last year.

All companies contributed to the group's good performance, and this has been reflected in the increase in the share price. In spite of the one-for-one scrip issue at this time last year, the price of the shares has continued to inhibit the small investor.

The board is therefore recommending that the present nominal value of the ordinary shares of 10p be increased to 20p. The interim dividend will be paid on the 10p shares.

Looking ahead, the chairman says that two most recent acquisitions are making the good and expected contribution to net profit.

The chairman is confident he will be able to report a further material increase in profits at the year-end.

comment
Micro Business Systems can afford to weather a squeeze on hardware prices more easily than can most computer distributors. For the most profitable bit of its business is in maintenance and other services, the growth of which depends directly on the number of computers MBS can push onto the

market. Hardware prices still look as if they have further to fall, but MBS is to some extent protected against that risk by its 82m rentals portfolio, currently growing at some £300,000 per month. Alvernoic contributed £200,000 to taxable profits, indicating that the pace of underlying growth elsewhere is as strong as ever. The Data Efficiency and Computer Peripherals acquisitions should chip in up to £900,000 in the second half, pointing to more than double full-year profits of £4.6m pre-tax. With the shares unchanged at 35p, the earnings multiple comes down from formerly stratospheric levels to 17.5, assuming a 15 per cent tax

Strong exports boost Richard Clay to £0.6m

PRE-TAX profits on ordinary activities at Richard Clay, book printer and binder, improved by 23 per cent from £621,000 to £642,000 in the six months to July 29, 1984.

Turnover rose by 19 per cent from £9.7m to £10.5m, with exports showing particular strength. Operating profit showed an increase of 17 per cent to £746,000 before redundancy costs of £28,000 compared with £190,000 in the corresponding period last year, and other income of £2,000 (£83,000—mainly representing the sale of surplus property).

The interim dividend is unchanged at 1.3p net—last year a total of 3.5p was paid from

pre-tax profits of £1.1m. Earnings per 25p share are stated to have increased from 2.88p to 3.75p. First half tax was up from £261,000 to £303,000 and after preference dividends of £2,000 (same), equity earnings were £37,000 against £259,000.

Mr Charles Birchall, the chairman, says all the constituent parts of the UK operating division continued to improve their results. However, market conditions were difficult for the Singapore subsidiary, which had a disappointing half-year, and further corrective action is being taken.

He says the current situation is that order books are holding up well, and margins are showing

some improvement. Subject to its trading in Singapore being more satisfactory, the outlook for the year as a whole can be expected to show a continuing recovery in the group's operations.

comment
Mr Robert Maxwell may no longer have a publicised interest in Richard Clay but the directors continue to keep an eagle eye on the share register. Their boast that Clay is a leading book publisher is hardly impressive—sales are up by 19 per cent (including 14 points of volume) but operating profits are lagging a little behind with a 17 per cent gain. Margins for the whole sector may be looking better in recent weeks and less money should be lost in Singapore, and automation could easily boom on a market capitalisation of only £9m. From bibles to the stereotyped romances of Mills & Boon, Clay is an important cog in the publishing world and, on

the face of it, not a particularly expensive one for an aspiring publisher. Also the long haul back to earlier profit levels is unlikely to captivate shareholders if a bid does emerge offering a quick capital profit. The latest figures are hardly impressive—sales are up by 19 per cent (including 14 points of volume) but operating profits are lagging a little behind with a 17 per cent gain. Margins for the whole sector may be looking better in recent weeks and less money should be lost in Singapore, and automation could easily boom on a market capitalisation of only £9m. From bibles to the stereotyped romances of Mills & Boon, Clay is an important cog in the publishing world and, on

British Vita has good basis for future growth

PRE-TAX PROFITS of British Vita, maker of polymeric products, rose by 10.2m to £5.53m in the first half of 1984, an external turnover £6.63m higher at £61.6m.

Mr F. A. Parker, the chairman, says that prospects for the second six months appear to be reasonably favourable with the consolidation of the restructuring and investment programmes in the UK and Europe forming a good basis for future growth.

Profits in both the UK and European area and international side showed an improvement. As in the first half of last year, 47 per cent of profits were in the UK and Europe and 53 per cent from international companies.

At the operating level, group profits were down slightly from £3.97m to £3.91m and the increase in pre-tax figures reflected a higher share of £1.78m

(£1.57m) from associates and reduced interest charges of £465,000 (£508,000).

Net attributable profits came through ahead from £2.52m to £2.98m (£1.99m), minorities of £51,000 (£53,000) and extraordinary credits of £394,000 (£177,000 debits)—these included an estimated net tax credit of £487,000.

Earnings per 25p share increased from an adjusted 10p to 10.3p and the interim dividend is effectively raised from 3.64p to 3p net—last year, a total equivalent to 5.38p was paid on pre-tax profits of £10.58m.

Following last year's threefold profit increase as compared with 1983, this half year's UK and European profit was made in the context of a slowing down of the consumer-led recovery in the latter half of the period, the costs of restructuring production facilities and the miners'

strike which has temporarily reduced demand within certain sectors of the group's industrial products range.

Internationally the increase in profit was primarily from the Australasian and Far Eastern operations with significant contributions from other areas. In Australia, Vita Pacific's operations were successfully floated as a public company, the group retaining its 40 per cent interest.

Mr Parker said later that Tramico had a turnover of some £27m and pre-tax profits of the acquisition was around £2m. Still acquisition minded, the chairman indicated that Germany was an area being looked at, but overall he commented "we are well set up for the future."

Capital spending in the first six months totalled some £3.75m, against over £4m in the whole

of 1983. Mr Parker said there would be further spending in the second six months, but evening out.

comment
At first sight it appears that British Vita has failed to make the most of a useful improvement in sales. Turnover is up 12 per cent but pre-tax profit has moved by a mere 3 per cent. But the group has taken the opportunity to reorganise some of its operations in the wake of the modest Tidans and Smith acquisition, and much of the cost is borne above the line. Equally significantly, much time has been spent over the far larger Tramico acquisition in France, which will begin to contribute in the second half. This company will bring into the group new products, notably a novel type of liner for car roofs, which may later be also manu-

factured in the UK. The purchase fits into the group's strategy of expanding its interests in the UK and Europe to serve international customers especially vehicle manufacturers. Elsewhere, operations in Australia and the Far East are expected to grow faster than the African interests, which are prone to exchange control and dividend remittance difficulties. Investors cannot expect dramatic progress at British Vita; but £1.5m pre-tax is within reach for the year, assuming a 40 per cent tax charge, puts the shares on an undemanding rating of just over 7.

Statement by the Chairman, Mr. Peter Goodall, CBE, TD
I am pleased to be able to report that the profit for the first six months of 1984 is by far and away the largest ever reported for a first half, and is to a major extent a direct result of our long-term commitment to research, development and investment in modern production techniques. In this period all sectors of the Group have performed well.
As I write this statement, there appears to be a slowing down in the economy which, if it persists, must have some effect on the second half of the year.

Peter Goodall

UK COMPANY NEWS

Mellerware up to £0.6m so far and sees further rise

WITH TAXABLE profits more than doubled at the interim stage from £283,000 to £812,000, Mr John Meller, the chairman of Mellerware International, expects that the traditionally stronger second half trading will produce "significantly higher profits" for the full year.

Fitch & Co. up to £0.6m and plans full listing

REFLECTING the continuing strong demand for design services in a highly competitive market, Fitch & Company Design Consultants has turned to taxable profits up by some 31 per cent to £537,000 in the first half of 1984, against £425,000.

Our Price tops forecast with £1.2m

OUR PRICE, the London-based chain of record and tape shops, has beaten its prospectus profits forecast by some £100,000 and is confident of achieving a "satisfactory" result in the current year.

Resource Technology unchanged at £1.5m

Resource Technology, which secured a full listing last December from the USM, made a pre-tax profit of £1.53m in the year to April 30 1984. This was little changed against last year's restated £1.52m, but was higher than the previously reported £0.74m.

Systems Reliability jumps by 50% to £1.25m

Systems Reliability, which makes computer-based telephone management and associated information entry systems, reported a 50 per cent increase in its pre-tax profits to £1.25m in the first half of 1984.

IS new shops and to continue the programme of refurbishment and relocation where required. Based on published trade figures the company estimates that its share of the UK market had risen to 5.2 per cent in the year to March 1984 from 4.3 per cent in the previous year.

Ramco debut brings £0.5m

IN THE company's first results since the USM flotation last April, Ramco Oil Services has seen a significant increase in both turnover and pre-tax profit in the six months to June 30 1984.

The companies have embarked on further programmes and projects to improve productivity. These efforts are directed at all facets of the organisation and regular formal reviews of progress towards quantified objectives are held - C. G. Knobbs.

Gold The major reason for the drop in gold price in U.S. dollar terms has been the strength of that currency. The fall in the dollar as predicted by many commentators and as expected in terms of purchasing power parity has not materialised.

Production costs The planned productivity improvements built into this year's budgets call for an increase of between 9 and 10 per cent in production costs. Inflation in the economy runs at above 15 per cent, which is not impossible given the effects of a weak rand and the aftermath of the severe drought, the companies will be hard-pressed to meet their productivity targets.

MINING NEWS

Higher profit from Western Mining

BY GEORGE MILLING-STANLEY

HIGHER NICKEL prices and favourable movements in exchange rates were largely responsible for a substantial increase in profits of Australia's Western Mining Corporation (WMC) in the year to June 30. Accounts based on the equity method show attributable operating profits of A\$30.13m (£19.4m), up from the previous year's A\$10.72m. Earnings jumped from 1.4 cents per share to 7.1 cents, and WMC has doubled its final dividend to 2 cents a share, making a total of 4 cents for the year compared with 2 cents last time. The average price per tonne

of nickel produced was 6.4 per cent above that for the previous year, and that increase, coupled with a 3.5 per cent fall in the Australian dollar against the U.S. currency, contributed to a rise of almost 10 per cent in the average realisation per tonne. A sharp increase in sales of gold was another factor behind the improved performance. Excluding the 50.5 per cent-owned Central Norseman Gold, WMC sold 169,635 ounces of gold, against 103,749 oz in 1982-83. Factors affecting profits adversely included a rise in exploration spending from A\$22.15m to A\$27.94m, a 7.5

per cent all in the average realised gold price, and a rise of 3.2 per cent in the production cost of nickel, largely arising from the higher price of natural gas bought by the refinery at Kwinana, Western Australia. WMC also recorded an extraordinary gain of A\$16.18m, mainly from a property sale. The associated Central Norseman, which relies almost exclusively on gold for its income, suffered a sharp downturn in profits for the year. On turnover down from A\$37.99m to A\$38.54m, the com-

pany managed net profits of A\$9.73m against A\$16.56m for 1982-83. Earnings fell from 63.7 cents a share to 51.5 cents, and the final dividend is cut from 20 cents to 7.5 cents, making a total for the 12 months of 20 cents, against 40 cents last time. Central Norseman blamed the downturn on the lower gold price, which fell from A\$481 per ounce to A\$443, higher operating costs and increased provisions for development and exploration spending. The company boosted gold production for the year to 80,153 ounces, against 78,776 oz in the previous 12 months.

Quotas still restrict tin output

TIN CONCENTRATE output from the producers in Malaysia continues to be restricted by the production and export controls imposed under the sixth International Tin Agreement. A total of 16 dredges among the companies under the control of Permas Charter Management remained closed throughout the month of August, while other dredges were affected by shutdowns for part of the period. The Malaysia Mining Corporation group managed production of 416 tonnes, up from July's total of 407 tonnes. This brings the cumulative figure for the first seven months of the financial year to 2,912 tonnes, compared with 3,374 tonnes at the same stage of last year. The second-largest producer, Berjantak, lifted its output from 214 tonnes to 215 tonnes, bringing the total for the first four months of the year to 858 tonnes, against 694 tonnes.

| | Aug | July | June |
|--------------|-----|------|------|
| Aekem | 48 | 94 | 74 |

| Tronoh | 38 | 44 | 5 |

Improved prices lift ZCCM

THE IMPROVEMENTS noted over the past year at the state-controlled Zambia Consolidated Copper Mines (ZCCM) have continued during the first quarter of the current financial year. ZCCM, in which Zambia Copper Investments has a stake of 27.3 per cent, returned to profit in the year to March 31, and has maintained the improved performance with net profits in the three months to June of Kwacha 6.5m (£2.7m). This compares with net profits in the same period of last year of K11.5m, and a total for the year to March 31 of K1m.

Improved prices lift ZCCM

The latest profit was struck after interest charges of K23.9m, compared with K25.6m in the first quarter of last year, and taxes totalling K24.1m, of which the mineral export tax accounted for K22.7m. Earnings for the quarter were 7 Nge, down from 13 Nge in the first quarter of last year. ZCCM said that copper production at 122,823 tonnes for the quarter was 14 per cent lower than for the opening three months of last year, reflecting the "critical shortages of spares and consumables and low equipment availability". Copper sales were also a little

Improved prices lift ZCCM

below those for the corresponding period, but the average realisation on K23.9m per tonne was 27 per cent up on last year, reflecting the continued depreciation of the Kwacha against major trading currencies. The group's heavy investment in cobalt of four years ago also seems to be coming to fruition, with a jump of 27 per cent in production to 1,073 tonnes in the latest quarter. Sales increased by 138 tonnes to 537 tonnes, and the average price realised was up sharply from K13,771 per tonne to K24,193. Production of lead and zinc was lower, in line with the reduced demand.

RESERVES AT the Ontario gold

property of McFlinley Red Lake Mines have been estimated at 426,374 tons at an average grade of 0.44 ounces (13.7 grammes) of gold and 1.09 oz of silver per ton, according to the company. Canada's Coniagas Corp has acquired a 25 per cent stake in the property, which may be raised to 50 per cent through speeding on exploration. The remaining 50 per cent will be retained by McFlinley Red Lake Mines. This company came into being through the reorganisation of Sabine Industries and McFlinley

MINING NEWS IN BRIEF

Mines, which came into effect on July 20 this year. McFlinley Red Lake Mines was set up to acquire the holdings of these two companies in the gold property. Sabine shareholders were offered five shares in New Sabine Resources and four shares and one warrant for half a share in McFlinley Red Lake Mines for every 10 Sabine Industries' shares held on July 20. Sangei Besi Mines, Malaysia expects a loss on its tin mining operations in the current year to March 31 as a result of reduced production with the

COMPANY NEWS IN BRIEF

exhaustion of reserves at the Hong Fatt open pit and mine development work at the Balakong Road Block. For the year to last March the company's tin concentrate sales were lower and unit costs rose, with the result that mining profits fell to M\$3.1m (£250,000) from M\$3.1m. Interest received was also down at M\$1.9m, and the net profit came out at M\$1.6m against M\$2.8m. Dividends totalling 75 cents less tax at 40 per cent were declared, against 140 cents less tax in the previous year.

COMPANY NEWS IN BRIEF

Profits of the Laidlaw Group of main Ford dealers fell from £751,000 to £286,000 in the half year ended June 30 1984, with profitability in the second quarter rising to its expected level. Turnover was held at £49.59m (£40.4m). The company, which came to the USM towards the end of last year, is paying an interim dividend of 1.1p net, and hopes to recommend a final of 1.4p. Mr I. M. Robertson, chairman, says it is difficult to forecast how sales and profits will turn out for the remainder of the year. Results will depend very largely on how price-competitive Ford choose to be and whether or not the lessons of the period September 1983 to May 1984, when it abandoned major incentive campaigns, have been learned. Profit before tax for the year 1983 was £394,000. The improving trend at Tavener Rutledge, confectionery

BIDS AND DEALS

Dee makes agreed £23m bid for Lennons

BY CHARLES SATCHELOR

Dee Corporation, the super-markets and food distribution group, which made a £220m bid for the rival Booker McConnell concern that is currently stalled by a Monopolies investigation, yesterday agreed a £23m bid for Lennons Group, the Merseyside retailer.

Lennons is the second oldest established family company to be snapped up by a larger retailing group in recent months. Argyll Group last month announced a £25m agreed bid for Amos Hinton, a North-East supermarket company.

Dee is offering two of its own 25p shares for every 10 Lennons shares of 10p each in a bid worth just under 60p a share, 14p up on yesterday's opening

price. Dee's shares fell 2p to 566p yesterday while Lennons rose 11p to 57p.

Lennons operates 41 super-markets and 94 off-licences throughout the North and the Midlands. It doubled pre-tax profits to £11.7m in the year ended March 31 1984 on turnover of £21m, but profits have been under pressure for the past three years and it failed to match its 11981 profit figure of £2.13m.

Lennons will give Dee's Gateway Foodmarkets chain additional outlets in the North-West of England where it is under-represented. The two companies together have only 2 per cent of the packaged grocery market in the region and no overlapping

store locations. Naturally Dee claims a 5 per cent market share.

Mr Alec Monk, Dee chairman, said: "Lennons has not been trading very well for three to four years now and they have come to realise that even if they make improvements it is a hard road to follow. The prospective sale of Amos Hinton to the Argyll Group underlines to them the way that family businesses were going."

Dee's offer has the backing of Lennons' directors who control 2.91m shares or 7.49 per cent of the equity. Full acceptance of the offer would lead to the issue of 4.1m new Dee shares or 6.45 per cent of Dee's enlarged equity.

Mr Denis Lennon, the chairman, whose father Frank founded Lennons around the turn of the century, said: "It is getting more and more difficult for the smaller people to survive in the rough, tough world we live in. There is a lot of unemployment in this area and we face competition from companies such as Sainsbury's which are moving up here and opening large stores with car parks."

Dee and Lennons had been in contact in the past and Lennons has also had approaches from other groups, but yesterday's agreement resulted from an approach made last Saturday by Dee.

"The Dee dividend is much higher than ours and it is a long

time since our shareholders have seen our price around 60p," said Mr Lennon.

Dee is being advised by Morgan Grenfell and Lennons by Singer & Friedlander.

Dee made a pre-tax profit of £28.3m on turnover of £1.39bn in the year ended April 28 1984. It has 340 super-markets in the UK trading as Carrefour super-stores, Gateway Foodmarkets (including Frank Dee Supermarkets and Key Markets) and Wellworth. It also operates 93 cash and carry warehouses.

Dee is due to meet the Monopolies Commission for the first time next week to discuss details of its contested bid for Booker.

Amstrad looks at Fidelity

By Charles Satchelor

Caparo Industries, Mr Swral Paul's engineering company, may face competition for the hand of Fidelity, the hi-fi and television group, in the shape of Mr Alan Sugar's Amstrad, consumer electronics group.

Caparo's cash offer, announced last Tuesday, has already been rejected by the Fidelity board.

Mr Sugar said yesterday: "We have had some contact with Fidelity and we are going to review the situation and make a statement on Thursday. There have been no formal talks. It is not out of the question that we would bid for Fidelity. It is going to take us some time to look at things internally and to see if we are interested or not."

Fidelity's shares rose 3p to 125p yesterday — 5p above the level of the Caparo offer. Amstrad's shares fell 1p to 75p to value the audio, video and personal computer importer and manufacturers at £22m. Caparo was unchanged at 37p.

Amstrad has expanded rapidly since it went public in April 1980, buying in many of its components in the Far East and launching a range of low cost products culminating last April in its CPC464 micro-computer. It has forecast pre-tax profits of at least £2m for the year ended June 1984.

Swedish group terminates talks with ICI

BY KEVIN DONE, NORDIC CORRESPONDENT

CARDO, A Swedish investment company, has turned down a bid from Imperial Chemical Industries for a majority stake in Hillshoeg, its highly profitable plant breeding subsidiary.

ICI started negotiations late last year, but the Cardo directors decided yesterday to break off talks on the grounds that it was not willing to surrender control of Hillshoeg.

Mr Per Lindblad, managing director of Cardo, said the company was still keen to co-operate with a group with similar scientific resources to ICI, but it was

not prepared to give up its majority stake. "The price for co-operation was too high," he said.

Hillshoeg, which is a leading plant breeding company, in particular for the sugarbeet and papyrus sectors, has a current market valuation of around SKr 1.6bn (£147.2m). It is 80 per cent owned by Cardo, which floated a 20 per cent stake in the company to private investors earlier this year.

Mr Lindblad said that ICI was not prepared to open its research and development resources in

agro-chemistry to Hillshoeg without majority control of the company.

Instead of the deal with ICI, Cardo has decided to intensify co-operation between Hillshoeg and Weibull, another plant-breeding and seed company it acquired in 1980.

The two companies would substantially increase their research and development.

At the same time, Cardo has turned down government proposals for a merger between Weibull and Svalof, a loss-making Swedish plant-breeding

company which is jointly owned by the state and the Swedish farmers co-operatives.

ICI confirmed last night that its discussions with Cardo about the possibility of a joint venture had been broken off as a result of the Cardo board decision yesterday.

"It is noted that the announcement with regret," a company spokesman said.

But he confirmed that ICI was still seeking ways of exploiting what it believes is a strong scientific base in bio-science, built up at its research centre at Runcorn.

Intriguing options of Imps' HoJo review

BY RAY MAUGHAN

IMPERIAL GROUP, the tobacco, foods and brewery concern, will review on Thursday this week, a cash offer regarding the beer and it is understood that Lord Hanson's industrial holding company has acquired between 15m and 20m Imperial shares in recent weeks.

The Thursday board meeting, chaired by Mr Geoffrey Kent, will consider, among other things, the feasibility of retaining the investment and continuing a programme of heavy capital expenditure over the next five years into a chain of Plaza Hotels. Other possibilities include an outright disposal to a third party and consideration of a management buy-out.

The review has been under way since July when HoJo unveiled a £2.2m operating loss in the six months to April 30 against a comparable £500,000 deficit.

HoJo's profits are heavily biased towards the July-September holiday period and the results at the interim stage are usually not far away from break even.

In the last full financial year, HoJo produced an operating profit, before interest and tax, of £19.4m and although the level of debt servicing is never disclosed,

In that context, Hanson Trust has been rumoured as a bidder, attracted by Imperial's strong cash flow from cigarettes and beer, and it is understood that Lord Hanson's industrial holding company has acquired between 15m and 20m Imperial shares in recent weeks.

The Thursday board meeting, chaired by Mr Geoffrey Kent, will consider, among other things, the feasibility of retaining the investment and continuing a programme of heavy capital expenditure over the next five years into a chain of Plaza Hotels. Other possibilities include an outright disposal to a third party and consideration of a management buy-out.

The review has been under way since July when HoJo unveiled a £2.2m operating loss in the six months to April 30 against a comparable £500,000 deficit.

HoJo's profits are heavily biased towards the July-September holiday period and the results at the interim stage are usually not far away from break even.

In the last full financial year, HoJo produced an operating profit, before interest and tax, of £19.4m and although the level of debt servicing is never disclosed,

Mr Geoffrey Kent, chairman of Imperial Group

criticism, Imps' first strategic acquisition in the U.S. was not completed for several months. The purchase price was \$63m which, at the time, translated to £28m with sterling trading at about \$2.40.

The City believes, however, that the Imperial board will be unwilling to sell HoJo despite the interim disappointment. The substantial track of capital spending required to establish a mid-priced hotel chain and the reversed fortunes of sterling in the intervening five years would now enable Imperial to recoup its outlay at a substantially lower dollar selling price.

The Mortgage Bank and Financial Administration Agency of the Kingdom of Denmark

U.S. \$150,000,000

Guaranteed Floating Rate Notes due 1993 Series 88

In accordance with the provisions of the Notes, notice is hereby given that the rate of interest for the period from 10th September, 1984 to 11th March, 1985 has been established at 12 1/4 per cent per annum.

The interest payment date will be 11th March, 1985. Payment which will amount to US \$3,414.24 per US \$100,000 Note and US \$641.42 per US \$10,000 Note, will be made against the relevant coupon.

Hill Samuel signs £6m deal with stockbroker

Hill Samuel, the merchant bank, yesterday announced that it has signed the agreement to purchase a 29.9 per cent stake in Wood Mackenzie, the stockbroker, in a deal worth £5.98m.

The bank said it intended to purchase the remaining 70.1 per cent once Stock Exchange rules were relaxed. The total deal puts a value on Wood Mackenzie of £20m.

The consideration of £5.98m for the 29 per cent stake will be satisfied in part by an issue of Hill Samuel shares. Of this figure £2.99m will be satisfied by the issue of 97,000 ordinary shares. £1.25m by the issue of unsecured loan notes and the balance in cash.

A third of the purchase price for the remaining 70.1 per cent will be satisfied through the issue of Hill Samuel shares.

The business of Wood Mackenzie has been divided into two parts with effect from September 3 this year. The stockbroking and investment research businesses were acquired by the newly incorporated Wood Mackenzie, while the computer services business, which provides performance measurement, valuation and investment accounting services was acquired by WM Computer Services.

WM Computer Services, which is wholly owned by the partnership, commenced trading as an entity on September 3, and Hill Samuel has acquired a call option on over 20 per cent of its share capital.

As part of the overall deal there is a requirement for those receiving Hill Samuel shares (equivalent in value to one-third of the consideration payable) to retain them until April 1989.

Wood Mackenzie will be capitalised at £1.78m, comprising £0.5m of ordinary share capital and £1.28m of subordinated loan stock. The subordinated loan stock will be subscribed by shareholders pro rata.

Pro-forma net profits before tax of the stockbroking and investment research business of the partnership for the year ended April 7 1984 amounted to £2.7m. The accounts were prepared using Hill Samuel's accounting policies and employment conditions. Net assets attributable to the businesses amounted to approximately £0.5m.

Mr John Chisne, Wood Mackenzie's senior partner, is to join the board of Hill Samuel.

The computer service business of Wood Mackenzie has been kept separate from Hill Samuel's operations to avoid any conflicts of interest which may arise from a close relationship with the bank.

Johnson Group Cleaners has purchased Al Phillips the Cleaner of Las Vegas, Nevada, for US\$1m cash (£3.55m).

Al Phillips is a retail dry-cleaning business with nine shops having an estimated 30 to 40 per cent share of the market in Las Vegas.

Would a better pitch help you improve your overseas sales?

What you call leg room the airlines call seat pitch. It's the distance between your seat and the one in front. It will, without doubt, make a difference to how relaxing your flight is and how ready you are to get down to business when you arrive.

So we've compiled a seating comparison table, showing seat pitch, width and angle of recline. This reveals that, depending on which airline you choose, the space you occupy can be noticeably different. One example — in First Class on Boeing 747's the difference in seat pitch can be almost two feet.

Seat comparison is just one of the many pieces of useful information we've packed into 'A Question of Class' — our unique, comprehensive review of the facilities and inflight services on 28 major international airlines. And the booklet itself is just one of the many ways we keep our clients well informed.

If you would like a copy of 'A Question of Class', please return the coupon with your business card or ask your secretary to write to Hogg Robinson Travel at the address below.

APPOINTMENTS

CONTRACTS

Top positions at Mothercare

HABITAT MOTHERCARE has made the following appointments: Mr Bernard Greaves, chief executive, Mothercare UK, Mr Eckart Matthes, chief executive, Mothercare Europe, and Mr Daniel Schwarzwald, chief executive, Mothercare U.S.A. Mr Greaves was appointed to the board of Mothercare Limited in August 1983. Mr Matthes joined Mothercare in July. Prior to joining Mothercare, Mr Matthes, a German national, was vice-president of Leffers Textile Department Stores for five years before spending five years as president of Bilka, a subsidiary of Hertie. Mr Schwarzwald, also joined Mothercare in July. Prior to joining Mothercare, he spent ten years at Abram and Straus in buying and managerial positions, becoming vice-president followed by two years assisting the president of Miller Wehl.

Mr Robert C. Davis has been appointed managing director of ATLANTIC INTERNATIONAL BANK. Mr Davis has been general manager since September 14, 1983 and succeeds Mr Joseph J. Battigieg who, after five years in London, is returning to Manhattan. National Bank of Detroit as first vice-president-wholesale administration. Mr Brian A. Weatherlake was joined the bank on August 1, 1983 and has been appointed general manager.

Mr Alan J. Knights has been appointed a director of EFC

Telephone Cables has £9m cable job

TELEPHONE CABLES (TCL) joint venture between Mr Noudah Ardrouml, a Lebanese entrepreneur, and Mr Abdurrahman Abu Nassef, a Saudi businessman.

The ability of the Mono progressive cavity pump to transfer liquids containing abrasive solids was a vital factor in winning an order for 51 pumps worth £120,000 to be installed in the Haysham and Torrens nuclear power stations. The stainless steel MONO PUMPS will be used on duties that include pumping of radio-active solids in suspension and active waters in the waste processing and cooling areas.

F.K.I. Electricals most recent acquisition, BURNEST ELECTRONICS has won a £5.4m contract for its vehicle radio equipment as part of a Home Office Directors of Telecom contract for 130m units of vehicle radio equipment for police forces and fire brigades throughout England and Wales.

Two British companies have scooped contracts worth £10,000 from U.S. competitors. The turbines and diesel generators for the first fully automated power plant in Saudi Arabia are to be made by two Surrey-based companies, A.J.A.K. MACHINERY (UK) and ATLANTA ENGINEERING. The new factory will manufacture and assemble components for line shaft water pumps. The company establishing the new factory, Abu Nassif Metal Casting and Pumps Factory, is a

The offshore division of WHESSOR HEAVY ENGINEERING (Whessor Group) has been successful in securing two contracts for Shell UK Exploration and Production. The first, worth £11.5m, is for three modules and a vent stack with a total weight of 4,180 tonnes, and is scheduled for installation in the Sea Field, in the southern North Sea, by November next year. The second, worth £2.5m, requires construction of a 600 tonne modular steel structure for the Fulmar Field and is due for completion April 1985.

KENT INDUSTRIAL MEASUREMENTS, a Brown Boveri Kent company, has won an instrumentation order worth over £400,000 for the South of Scotland Electricity Board's nuclear power station at Torness. The contract, to supply on-line analytical equipment for the advanced gas cooled reactor station, was placed by Babcock Briston on behalf of the National Nuclear Corporation and GEC Turbine Generators. It covers supply of chemical instrumentation plus associated panels, racks and benches.

INTERIM STATEMENT

British Airways

A SUCCESSFUL FIRST QUARTER

The Board of British Airways Plc announce the unaudited results for the 3 months ended 30th June 1984.

| Group Results | 3 months ended | | Year ended 31 March 1984 |
|--|----------------|--------------|--------------------------|
| | 30 June 1984 | 30 June 1983 | |
| Turnover: Airline | £m | £m | £m |
| Other | 682 | 603 | 2382 |
| | 772 | 643 | 2514 |
| Airline (including Airtours) operating surplus | 81 | 70 | 274 |
| Subsidiaries operating surplus (deficit) | (2) | 1 | (6) |
| Operating surplus | 79 | 71 | 268 |
| Other income including associates | 3 | 2 | 26 |
| Profit before the cost of Capital Borrowing and Taxation | 82 | 73 | 294 |
| Cost of Capital Borrowing (interest payable) | (25) | (27) | (106) |
| Currency Profits (Losses) (See Note 1) | (10) | 1 | (3) |
| Profit before taxation | 47 | 47 | 185 |
| Taxation (See Note 4) | (4) | NIL | (4) |
| Profit for the period before extraordinary items transferred to Reserves | 43 | 47 | 181 |

The unaudited results for the periods of three months ended 30th June 1983 and 1984 have been determined in accordance with the accounting policies used for the year to 31st March 1984.

The following should be noted.

- The sterling US dollar rate has fallen during the quarter to 30th June 1984 from \$1.44 to \$1.36. As a consequence there is a charge to Profit and Loss account of £10m in respect of US dollar loans borrowed for general purposes. The effect on US dollar loans borrowed specifically for the purposes of financing aircraft is to increase their sterling value by £18m, but there is a corresponding increase in the fixed asset value of the aircraft. The effect on the depreciation charge is not material.
- Provision has been made for the estimated cost of the staff profit sharing scheme attributable to the results of the quarter.
- The results for the 3 months ended 30th June 1983 have been adjusted so that they are comparable with those of the quarter being reported upon.
- No provision has been made for current UK Corporation Tax, because of the availability of losses brought forward. On present estimates it is likely that a small provision for deferred taxation will be required in the year to 31st March 1985, and accordingly £3m has been provided for this in the quarter. The remaining £1m is in respect of overseas taxes.

Commentary

The volume of mainline traffic in this quarter increased by 11.6% in terms of passengers and 9.9% in terms of revenue passenger kilometres over those for the 3 months ended 30th June 1983. These gains have been most pronounced in UK and Continental Europe. Satisfactory gains were secured in freight and mail and also charters. In spite of lower sterling, the increase in average yield was more modest at 3.4%, particularly in the Middle East and India. Expenditure has risen at a slightly smaller rate than revenue. Following the 2 year pay agreement from

1st January 1984 staff salaries have increased, and there has been continuing expenditure on improvements in passenger services. Depreciation has also increased as new aircraft continue to replace others whose book value had been previously written down to nil. As there has been some deterioration in the availability of foreign currency in certain countries to enable loan funds to be remitted to the UK, existing provisions against these situations have been strengthened.

The airline operating result shows a 15.5% improvement over the corresponding period a year ago, and the outlook for the remainder of the summer season is good. The airline operating ratio for this quarter is 114.4, compared with 114.2 in the corresponding quarter a year ago.

Borrowings
During the quarter loan repayments amounted to £56m. The effect of the fall in sterling increased the sterling value of the US dollar loans by £28m, with the result that total bank borrowings only declined from £901m to £873m. Further significant repayments however will occur in the second quarter.

Pension Scheme
The Board announced a new pension scheme for new entrants from 1st April 1984. All employees belonging to the old scheme (which is now closed to new entrants) were offered terms to transfer to the new one. 17000 or 53% of those eligible have elected to do so.

Recommendations by the Civil Aviation Authority (CAA)
The Report of the CAA was published on 16th July 1984. The Board has informed the Secretary of State for Transport that it is totally opposed to those recommendations which would (a) involve mandatory and therefore confiscatory transfers of any of BA Plc's routes to third parties and (b) transfer the powers of the CAA. The Board awaits the Secretary of State's response.

*Comparative figures for the year to 31st March 1984 are extracted from the full audited accounts of British Airways Board and its subsidiaries, which received an unqualified full audit report, and a copy of which accounts have been delivered to the Secretary of State for Transport.

BRASCAN INTERNATIONAL B.V.

FINANCIAL TIMES SURVEY

Tuesday September 11 1984

Biotechnology

The focus of interest in biotechnology is shifting from the activities of new entrepreneurial businesses to greater involvement by established companies, notably in pharmaceuticals and health-care. This survey co-incides with Biotech 84, an international conference in Washington DC this week

A race to develop new products

BIOTECHNOLOGY—the industrial use of microbiology—is changing rapidly in commercial perception. Five years ago it was seen mainly as a novel way of making some exceedingly scarce substances, such as interferon, in quantities that might open lucrative new markets. Today it is recognised as a family of techniques of potential value to a wide span of industry, which many kinds of company can help to supply.

Five years ago most of the claims for biotechnology were coming from minuscule companies, mostly in the U.S., fostered by venture capitalists in partnership with academics versed in "genetic engineering." These new biotechnology companies were mostly research concerns selling claims that they knew how to make some highly-prized compound too complex for chemical synthesis. They knew, but sometimes played down, the true time and cost of bringing their compounds to the market, in case it frightened away the type of money on which these companies were launched.

The experience of such businesses has provided both investor and user with a wealth of information on the prospects and pitfalls for biotechnology. Behind a front of impressively large, but often suspect, statistics of the size of markets the techniques might reach, scientists were showing that the techniques worked; that they could harness microbes to make compounds too complex to

This survey was written by **DAVID FISHLOCK**, Science Editor

Big companies had paid for the research often by placing a contract with the new concern. Schering Plough paid Biogen to develop genetically engineered alpha-interferon. Eli Lilly paid Genesetech to develop human insulin. Sandoz paid Cetus to develop fructose syrup.

At Biotechnology 84 at Wembley in May, Mr Ronald Cape, co-founder of Cetus, estimated that U.S. new biotechnology firms (NBFs) alone would spend more than \$500m (£385m) on research this year. But established U.S. companies would spend three times as much on biotechnology, bringing the total to more than \$2bn. The established companies—not

only in the U.S.—will determine the speed and penetration of any "biotechnology revolution." They were made to seem slow by the pace and publicity of the new companies but in reality had often been aware of the possibilities first, before even the key inventions of the mid-1970s which made possible genetic engineering.

Hoffman-La Roche, flush with funds from tranquiliser sales in the 1960s, had the foresight to invest in research institutes in Switzerland and the U.S., which stood closer to academic than to their own research centres. Sandoz had such an institute in Vienna, but kept it closer to corporate research and development. ICI financed its first joint laboratory with a university in 1973-74.

In other words, the new companies are selling themselves to a very sophisticated market, well able to assess both the science and the commercial claims. But it is a market which, as Dr Hubert Schoemaker, president of Centocor, has recognised clearly, desperately needs new products. This is especially so in health-care, which seems set to be the dominant outlet for new biotechnology in the 1980s.

Dr Schoemaker sees his new concern as "a company to link the untapped resources of the academic research community with the excess distribution capacity of existing companies in the industry." Centocor's commercial partners include Hoffmann-La Roche, Abbott Laboratories and Toray Fuji-rebio.

The pace-setting new companies are recognising that their survival as independent entities depends crucially on

Senior British biotechnologists, Rob Margetts of ICI (left) and Jack Edelman of RHM, sample a very credible simulation of a cold chicken-and-ham pie made from myco-protein made in RHM's pilot fermenter.

getting right this relationship with, on the one hand, the state-funded resources of the academic world, and on the other the resources of big business. Cetus, for example, learned a harsh lesson of the penalties of over-dependence on too few patrons.

When Social decided—for commercial, not technical reasons—not to proceed with the fructose project, the blow could have been mortal. In fact, it has regrouped under new management as a health-care company, rather than a contract research and development concern, with product sales exceeding \$2.5m last year. The efficiency with which the

new companies have transferred the new scientific discoveries of recombinant DNA (gene splicing) and monoclonal antibodies has had consequences for the academic world. It has exposed weaknesses and gaps in the underlying research base.

Industry, large and small, has been tapping the data bank at furious pace since the mid-1970s, warns Dr Ed Dart, who heads ICI's research and development in biosciences. "The data bank is exhausted," he says.

ICI has provided the Government's Advisory Council on Applied Research and Development with its view of the weak-

LARGE CONTRACTS BETWEEN COMPANIES AND UNIVERSITIES

| Company | University | Value of contract | Year of agreement | Description |
|----------------------|---|-------------------------------|-------------------|--|
| Celanese | Yale | \$1.1m over 3 years | 1982 | Basic research on enzymes |
| Du Pont | Harvard Medical School | \$3m over 5 years | 1981 | Fundamental genetic research |
| Engenics* | Stanford, MIT California | \$2.4m over 4 years | 1981 | Chemical engineering and biotechnology research |
| Exxon | MIT | \$7m-\$8m over 10 years | 1979 | Study of more efficient and non-polluting combustion methods |
| Hoechst | Massachusetts General Hospital (Harvard Medical School affiliate) | At least \$70m over 10 years | 1980 | Creation of department of molecular biology |
| Leicester Biocentre† | Leicester | £1.25m over 5 years | 1983 | Yeast genetics |
| Monsanto | Washington University, St Louis | At least \$23.5m over 5 years | 1982 | Basic and product-oriented research on proteins and peptides |
| Monsanto | Oxford University | £1.2m over 5 years | 1983 | Sugar chemistry |
| Pharmacia | Uppsala | \$4m over 6 years | 1982 | Molecular biology |

* Engenics is a joint venture of Bendix, General Foods, Koppers, Mead, Noranda Mines and Elf Aquitaine. † Leicester Biocentre is a joint venture of John Brown, Dalgety-Splitters, Distillers Gallaher and Whitbread.

nesses in the current academic armoury.

Prof Sydney Brenner, director of the Laboratory of Molecular Biology in Cambridge, delivers the same warning from a different angle when he chides industry for looking to laboratories such as his for ideas for new products. What they should be seeking from basic research is new directions and techniques for a novel way of doing industrial chemistry in which yield is no longer important.

Moves to exploit opportunities

Once the scientist has found a self-replicating molecule, he can amplify by biotechnology instead of worrying about the efficiency of his chemistry. Some major companies have already responded by directly funding underlying research in universities.

Early this year, the Office of Technology Assessment of the U.S. Congress published a 600-page study of commercial biotechnology. It demonstrated that the U.S. has mounted a big commercial effort to exploit the new opportunities for biotechnology.

It found 219 U.S. firms keenly interested in the new technology, of which over 100 were new companies. But it also reveals U.S. fears that Japan will repeat the success it has had in consumer electronics and

overtake the present clear U.S. lead.

Japan, the study finds, considers biotechnology to be "the last major technological revolution of this century." It is being commercialised there by a wide range of industries, many of which have experience of older biotechnologies. Outside the U.S., Japan is the only country with most finance available for biotechnology. Its government has declared it a national priority and is backing joint company ventures.

Most established Japanese companies in the field have at least one bank as a large shareholder, providing low-interest loans for research and development. Wealthy individual investors in Japan, although few in number, have also put up risk capital.

The OTA study finds that Japanese interest blossomed only in 1980, in response to what was seen as a threat to its pharmaceutical industry. In four years, more than 150 companies have rapidly reorganised their research and development systems, equipped research institutes, and recruited new staff to evaluate the applications of biotechnology, it says.

In 1981, the Japanese Government announced a 10-year plan to promote "next generation" industrial biotechnologies, focusing on bio-reactors, genetic engineering and mass cell culture. It invited 14 companies to participate, with MITI provid-

ing over \$100m, but 80 per cent of the research and development was to be done in industry.

Five other Japanese Government agencies provided a further \$67m for biotechnology in 1983.

The OTA researchers are also impressed by the "truly extraordinary" ability of Japanese companies to rectify shortages in biotechnology skills by retraining its scientists.

European ventures

No other part of the world is seen to pose a similar threat to U.S. domination of the new biotechnology. Britain is judged to lack the dynamism needed to get the best from such a broad-based technology.

West Germany has problems harnessing its academics to assist industry. France lacks the academic base essential to commercial success.

Only Switzerland, with its three major multi-national pharmaceutical groups backed by strong university research and government interest in promoting biotechnology, is seen as a commercial force to be reckoned with.

PORTON INTERNATIONAL

THE WORLD STANDARD IN BIOTECHNOLOGY

Commanding resources on a worldwide basis for commercial biotechnology

Porton International is the first independent group of biotechnology companies in the world to combine the necessary command over resources to produce the complementary skills essential to the commercialisation of biotechnology.

Porton International is internationally located with offices and operations in the USA, Europe and the Pacific Basin, with group headquarters in London and Washington. As an independent private group whose shareholders include world leading pension fund and institutional investors, Porton International holds a unique position in its freedom to fully exploit biotechnology in its multiple applications to the commercial world.

Porton International is structured into ten divisions, within which there are separate subsidiary companies:

- Enzymes and special proteins
- Fermentation and bioprocess
- Advanced molecular biology
- Clinical testing and validation

- Downstream processing
- Biotechnology hardware and plant
- Biotechnology instrumentation and process control
- Biotechnology information, patents and publications
- Cash flow products
- Strategic project consultancy

- Group companies include:
- Speywood Laboratories
 - LH Fermentation
 - IGB Products
 - International Medical Diagnostics
 - OMEC International

Porton International are, and will remain, The World Standard in Biotechnology.

BIOTECHNOLOGY 2

Diagnostic tools for medical and veterinary uses are likely to form the first wave of new products from genetic engineering

Major emphasis on new pharmaceutical products

THE NEWFOUND enthusiasm for biotechnology of the past few years was launched mainly on promises of new drugs: such drugs as interferon, for diseases such as cancer and others, widely regarded as incurable by earlier methods.

Biotechnology has delivered the drugs and shown that it can make, in quantity, substances once regarded as exceedingly rare. Whether they will prove both efficacious and safe still remains to be seen and it will inevitably take longer than early promises implied.

Biotechnology is also delivering valuable new products in less glamorous markets: a method of identifying hepatitis B virus, a way of purifying interferon, a technique for biodegrading stubble instead of burning it, a way of cleaning drains by dissolving the hair that is so often the cause of clogging. Soon British housewives will be buying foods made in a big bio-reactor at Billingham.

The drug race

Genentech and Biogen led the race to produce genetically engineered interferon. Biogen has obtained a patent from the European patent office for the cloning of alpha-interferon by Dr Charles Weissmann of Zürich University, who is chairman of Biogen's board of scientific advisers.

Within a few months, Schering Plough, the U.S.

health-care group, hopes to bring alpha-interferon to the market, under the brand-name Intron, as a treatment for certain rare cancers and also for the common cold.

The biotechnologists have thus fulfilled their promise of delivering pure and plentiful interferon. Less happy, however, have been the results of trials on patients so far. It is neither a panacea nor free from side-effects. But the availability of Intron as a research drug will encourage much wider trials for potential uses.

Meanwhile, interferon has proved to be not one but a family of substances found

naturally in the body. Biogen has genetically engineered another, gamma-interferon, said to be ten times as potent as the alpha form. The company is confident enough that gamma-interferon will prove valuable to the doctor to plan to make and sell the drug itself, under the brand-name Immunon, as a new treatment for cancer.

It is building a production unit in Geneva, expected on stream late next year. Dr Walter Gilbert, its chairman, says he sees Immunon as a major drug with potential earnings as a mature product of \$300m a year. Dr Gilbert, a Nobel laureate

for his cancer research, believes that cancer treatment is a sufficiently small and well-defined specialty for Biogen to tackle this market unaided in the U.S. He envisages a small sales force of about 75 selling directly to the 1,400 U.S. specialists by the late-1980s.

Together with gamma-interferon, he plans to market another genetically engineered version of a natural substance, interleukin-2, as "a broad-spectrum immune modifier" for use with interferon, under the brand-name of Biolumin.

Last spring the company also announced the first tests in Europe for interleukin-2, for AIDS (acquired immune deficiency syndrome). The promise of interleukin-2 lies in the way it stimulates the growth of cells controlling and regulating the human immune system, which holds promise for the treatment of such diseases as rheumatoid arthritis and multiple sclerosis.

In Britain, Celtech with strong support from the Medical Research Council, is establishing itself as a world leader in the novel technology

of monoclonal antibody production. Monoclonal antibodies, first made in Britain, are now recognised as substances with very wide application to blood clots in heart attacks and drugs to the treatment of disease.

Celtech's culture products division, set up last summer, is tissue-culturing monoclonal antibodies in 100-litre fermenters both for Celtech's own products and as "raw materials" for other companies, notably Centocor in the U.S.

Recently it took delivery from APV of a 1,000-litre bio-reactor, costing in total about £250,000 to install and commission as the basis of a business producing kilograms of monoclonal antibodies a year.

"We're absolutely delighted with this business. We know we have a world lead and we intend to keep it," says Mr Gerard Fairclough, Celtech's chief executive. Applications for "bulk" quantities of these highly-prized agents include the purification of alpha-interferon and the typing of blood.

But Celtech's "inside track" into MRC research in genetic engineering has also given it access to major opportunities for new drugs. One is tissue plasminogen activator, a scarce but potent agent for treating blood clots in heart attacks and strokes. Several NBFs have recognised it as a worthwhile target and Celtech puts the market potential at £300m a year.

It has undertaken a research programme for Sankey, a major Japanese drug company, to try to develop a genetically-engineered version of this agent.

Diagnosis of disease

WHEN Biotechnology Investments asked British doctors to say in what areas of health-care they would most like to see more research, three of the six priorities they pinpointed concerned the diagnosis of disease.

Tests for diseases are a logical target for the new biotechnology firms. Doctors are handicapped by having no specific tests for many human conditions, from hepatitis B to AIDS. For others, such as the many cancers, they would like an earlier indication that the disease is present.

An unambiguous test can also be an important first step towards treatment of a disease, again cancer is an example. Tests can also be introduced to the market much more quickly than a new drug, which requires prolonged safety testing.

For such reasons as these, many NBFs have included diagnostics in their business plan. For Celtech, for example, access to the MRC's technology of making and using monoclonal antibodies gave the company head start upon many rivals. Last summer it found a partner in Boots and set up Boots-Celtech Diagnostics as a separate company, with Boots providing the market outlets and experience for the new diagnostic tools.

A world lead

According to Mr Gerard Fairclough, Celtech's chief executive, the most like already astonishing the medical world with the quality of its first few products.

One is a way of measuring levels of alpha-interferon in blood, which will become increasingly valuable to doctors when the new sources of interferon become available. Another is a test of thyroid function, said to be simpler and more sensitive than any previously available. Thyroid function is a very common medical test and the company estimates that 730,000 were carried out in Britain in 1983.

Several U.S. NBFs, however, have been quick to exploit the diagnostic potential of monoclonal antibodies. Damon Biotech, for example, inaugurated this summer a \$4m cell culture facility designed to produce kilogram quantities of monoclonal antibodies as raw material for clinical trials and diagnostic kits.

Monoclonal Antibodies claims to be selling them at an annual rate of \$2m in such products as a range of pregnancy tests and a simple predictor for human ovulation. This company is also looking to the animal breeding market with adaptations of its human tests.

In Britain the AFRC has set up a monoclonal antibody centre at its Institute of Animal Physiology at Babraham near Cambridge. It will develop assays for use in plant sciences throughout the council's research centres. For example, antibodies have been produced that will discriminate between strains of potato virus Y to support diagnostic work in plant pathology.

The Agricultural Genetics Company will have automatic access to any tests with commercial potential that may come from this new centre.

Monsanto researcher examines a soybean plant grown by tissue culture from plant cells.

Pesticide production

AT Biotechnology 84 at Wembley, in May, Dr Stephen Lisansky of Tate and Lyle made some pointed comparisons between the cost of developing new chemical and new biological agents for the control of agricultural pests. A new chemical pesticide could cost £12m to develop and would need a £30m-a-year market to recoup that investment.

But a new bio-agent might be found for £400,000 and could make a profit from markets worth less than £600,000 a year, Dr Lisansky said.

Biological control of pests—using one organism to attack another—is one longstanding research activity of the Agriculture and Food Research Council now

thought to be ripe for commercial exploitation. The attraction lies both in the numerous insects still uncontrolled by chemical pesticides, and in the way pests are beginning to evade chemical control by developing resistance to insecticides and fungicides.

According to Dr Lisansky, microbial control agents for specific pests are often easy to find compared with the problems of screening many thousands of chemical compounds for signs of bio-activity. Moreover, pest resistance to microbial control has not yet been detected.

Dr Roger Gilmour and his newly-recruited management team at the Agricultural Genetics Company in Cambridge has the task of trawling the research of the AFRC for promising ideas of this kind that might be exploited as effectively as Celtech is exploiting MRC research in medical science. Its first research contract was

placed earlier this year with the council's Glasshouse Crops Research Institute, for field trials of a promising method of biodegrading straw and stubble after harvesting.

The big incentive is public pressure to end the traditional farm practice of stubble burning. Dr Jim Lynch has produced "cocktails" of microbes which rot straw quickly and efficiently in the moist, airless confines of a laboratory reactor. The challenge is to get them to work when spread over a field.

Plant tissue culture has already attracted a major research investment from far-sighted companies such as Unilever and ICI, some of which has already reached the stage of commercialisation. A long-range AFRC research objective now beginning to look very promising is the disease-resistant potato. Its scientists have developed a tissue culture technique which starts with leaves of the potato plant.

Cells from leaves, stripped of their cell walls by digestion, can be induced to reform into mature potato plants, and 10 British and European species have been cultivated in this way.

The significance of this achievement lies in the fact that the potato is very resistant to any improvement by conventional plant breeding. But AFRC scientists have recently shown that by tissue culture they can inactivate potato cells with foreign genes—the first major crop to be genetically modified, with subsequent recovery of whole plants.

It opens up the possibility of inactivation of genes that will confer disease resistance, disease being one of the main causes of low potato yields.

Even with crops that are amenable to modification by plant breeding, however, tissue culture promises important advantages. It can cut two or three years from a typical plant-breeding cycle, while inoculation with foreign genes through genetic engineering fore shadows still more dramatic improvement.

Search for the right technologists

Specialist skills

BIOTECHNOLOGY, today and for the foreseeable future, is intimately dependant on the academic community. The new biotechnology, which endeavours to exploit "genetically engineered" and otherwise man-modified organisms, has emerged from fundamental research in the past couple of decades. The skills have been translated to commercial settings by close collaboration between two worlds which traditionally are separate and often suspicious of each other.

Various channels of communication have been set up. The most highly publicised is the new biotechnology company whose principals come from and continue to be advised by the academic world. They include Genentech, Cetus, Biogen, Celtech, Centocor, and many more which have appeared in the past five years.

But farsighted drug companies were creating institutes separate from the main research centres much earlier. These were close enough to academic spirits to attract scientists of the calibre of Dr Georges Kohler, co-discoverer of monoclonal antibodies. Hoffman-La Roche set up two such institutes in the early-1970s in the U.S. and Switzerland, which today are providing a valuable pool of highly talented manpower for the emerging biotechnologies of the health-care industry.

Challenge

Britain has valuable national networks of such institutes in its research councils. The Medical Research Council's network of laboratories and institutes include, for example, the Laboratory of Molecular Biology in Cambridge, a world-class team headed by Professor Sydney Brenner. The MRC was persuaded to throw its intellectual muscle behind the new Celtech, in an endeavour to compete with offshore rivals having a head start. Celtech eventually persuaded an MRC unit specialising in immune-assay to join the fledgling company.

Similar endeavours are being

made to put the science of the Agricultural and Food Research Council behind a still-newer company, the Agricultural Genetics Company in Cambridge, set up by the British Technology Group in 1983. The company has been trawling the research council's programme, costing about £100m a year, for biotechnology leads that might support a new British business in genetic engineering applied to such things as crops and forestry.

Dr Peter Dean, research director, is an academic with entrepreneurial experience in biotechnology. His new challenge is to persuade the highly independent research director of the AFRC, with far less tradition of heeding advice from headquarters than the MRC laboratories, to put skills at the disposal of the new company.

Biogen has never made any secret of the fact that it set out to copy the pattern created by Genentech, the pioneering Californian company, in a more international setting. It has an impressive team of scientific

WASHINGTON. AT THE HEART OF BIOTECHNOLOGY COUNTRY.

The North East of England is an ideal environment for any project connected with Biotechnology. Organisations which already benefit from the special advantages offered by the area include ICI, NBL, Enzymes, Dornick Hunter and Bioprocessing Consultants.

The North East offers Biotechnology: major supporting industries in process plant and instrumentation and process control; an unrivalled and growing pharmaceutical sector; two universities and three polytechnics with substantial research resources deployed in biochemical projects; an ideal infrastructure including the finest water resources in Europe; an excellent workforce; good communications within the region and with the rest of

the UK — and a range of financial support programmes for new and expanding Biotechnology projects that cannot be bettered in Britain.

Washington, ideally situated in the North East and with an enviable record for industrial development, is ready at all times to assist incoming industry. Complete Relocation Packages will be specially prepared on request, including comprehensive information on schools, housing, transport, recreation, the arts and workforce in Washington.

Phone or write to Norman Batchelor, Washington Development Corporation, Uswarth Hall, Washington, Tyne & Wear. Tel: (091) 416 3591. Telex: 537210 DC WASHG.

* Washington. In a word, success!

Moving biotechnology into the future. Pharmacia Fine Chemicals at Biotech 84.

Biotechnology has often been compared with the electronics industry at the beginning of the 1960's. Innovative technology, a ready demand for products and an exciting, rewarding future for those companies that establish themselves early in the marketplace.

Modern biotechnology is no longer confined to specialist genetic engineering companies. Today, most of the chemical, food, drug and energy multinationals have some stake in the business, either by development of their own facilities or through acquisition, corporate partnership or contract research.

PURIFICATION ESSENTIAL
But whatever its type, size or location, a company's investment in healthcare biotechnology only begins to pay off when it has a product that is ready for the marketplace. In other words, purified, packaged and approved. Purification is the key word. It is this part of downstream processing that turns microbial fermentations and cell culture extracts into vital healthcare products. Products like vaccines, growth hormones, interferons, plasma proteins, neuropeptides and monoclonal antibodies.

PHARMACIA WORLD LEADER
Pharmacia Fine Chemicals is acknowledged as the world's leading developer and supplier of purification systems for healthcare products. With a world-wide organisation, scientific knowledge and practical

know-how, and years of experience in purification design, we are uniquely positioned to help you. Just as we have already helped others scale up and purify the products of biotechnology.

MEET US AT BIOTECH 84, USA
The world's leading financiers, industrialists and scientists are gathering at Sheraton Washington Convention Centre, Washington DC, September 10-12.

If you are involved in R & D or production, you'll be able to examine the latest in laboratory and production scale purification technologies at our stand in the commercial exhibition. We look forward to meeting and working with you.

To learn more about Pharmacia Fine Chemicals, read what the Financial Times had to say about biotechnology's move into full scale production (March 7, 1983). Then look at our own prospectus — leading figures from industry, government and the financial world have contributed. We'll send you copies on request.

Pharmacia Fine Chemicals

Pharmacia Fine Chemicals AB, Box 175, S-751 04 Uppsala 1, Sweden

Biotechnology - it wouldn't be where it is today without us

Our products helped crack the DNA code which paved the way for genetic engineering. We currently provide more products for the development of biotechnology than for any other purpose. And we supply them to just about every leading biotechnology company in the world.

Cloning and sequencing systems
Restriction and modifying enzymes
Products for nucleic acid and protein labelling
Reagents for immunology

Our range of products is continually being improved through our own commitment to research — ensuring that we maintain an unparalleled commitment to our customers' research.

BIOTECHNOLOGY 3

BRITAIN'S BIOTECHNOLOGISTS WITH INTERNATIONAL NAMES

DR RON COLEMAN, Government Chemist, whose think-tank of industrial biotechnologists is spreading the message in British industry.

LORD ROTHSCHILD, FRS, chairman and founder of Biotechnology Investment, the financial trust which has set very exacting investment criteria.

GERARDO FAIRTLOUGH, chief executive of Collico, which in three years has established itself as a world leader in the biotechnology of monoclonal antibodies.

DR CHARLES REECE, ICI research director and main board spokesman for one of the world's biggest contributors of expertise in biotechnology.

WENSLEY HAYDON-BAILLIE, executive chairman of Porton International, a private British-based venture which is forging close links with Government research.

How Ranks Hovis McDougall and ICI came together in a new food technology process

Myco-protein moves into the international field

New products

LAST MONTH a British biotechnology invention took a giant step towards the market when Ranks Hovis McDougall announced that ICI was its partner in a scale-up of myco-protein production from 50 tonnes to 1,000 tonnes a year. The object is to make enough myco-protein for full-scale test marketing in Britain of what is seen as a new food technology of international importance.

For two decades, RHM has been developing its myco-protein technology and safety-testing the product. "The Peter Pan of biotechnology," one RHM executive calls it. It was formally sanctioned as safe for human consumption by the UK Government in 1980. The

Government is backing the scale-up with a grant of up to £1.5m in the belief that it has both domestic and export potential.

The importance of the technology lies in the way it upgrades carbohydrates to first-class protein. RHM is using glucose syrup made from starch feedstock. Almost any indigenous carbohydrate—corn, rice, cassava, molasses, and not forgetting the residues currently discarded by the food processing industry—will do as the source of starch.

Myco-protein is a microfungus from the same plant family as truffles and mushrooms. It is a natural organism, unmodified by genetic engineering—a step the food industry is reluctant to take. Its thread-like shape confers valuable textural properties on the product, making the simulation of animal protein textures far more easily achieved than with, say, soya.

Meats, poultry and fish have all been imitated satisfactorily in both texture and flavour.

ICI and RHM have been in discussion about using ICI's biotechnology facilities at Billingham for the scale-up. According to Mr Robert Margetts, research director of ICI's agriculture division, from 1980 to 1982 the facilities were fully pre-occupied in commissioning the 50,000-tonne Pruteen fermenter and bringing it up to a high performance.

With Pruteen successfully launched commercially, and selling in over 20 countries as a premium protein additive for animal feeds, ICI has the capacity to exploit its 1,000-tonne pilot Pruteen fermenter, Mr Margetts says.

As Mr Margetts sees it, myco-protein—"a magnificent product concept"—needs a technology very similar to that of Pruteen. Test runs proved remarkably successful even though the Pruteen pilot plant

uses air-lift mixing, whereas RHM had developed a unique stirring system of its own. The ICI team demonstrated a run lasting five weeks.

Through New Era Foods, the joint venture between ICI and RHM, the two plan to spend about £4m-£5m—including the grant—over the next two years. Some hundreds of thousands of pounds will be spent adapting the plant to a new feedstock (glucose syrup instead of methanol) and different methods of harvesting.

The product will go to food processors—including RHM—for use in a variety of foods, novel as well as simulated, that should begin to appear in British shops next summer.

Myco-protein is the equivalent of milk protein, low in fat and sodium, high in fibre, and with no cholesterol—"all the factors the modern nutrition establishment considers important," says Dr Jack Edelman, RHM's director of research.

No kind of animal husbandry can achieve the food conversion of myco-protein, about 1:1 compared with 10:1 or worse for beef, he says. Moreover, the organism has a doubling time of only five hours.

The Pruteen pilot plant demonstration will provide the scaling factors for the next stage, a commercial demonstration. The target is to compete in price with meat protein at 20,000 tonnes, but Dr Edelman thinks it may compete on a scale as low as 10,000 tonnes.

This possibility offers the partners an alternative to building a new plant for the commercial demonstration. There may be enough spare capacity in the big Pruteen plant to use it for runs of myco-protein as well.

Myco-protein is also providing a demonstration of the astute use of public money in support of biotechnology. In 1981 the British Technology Group

agreed to co-fund the operation of the RHM fermenter, at a time when the company was short of cash, to give British industry more time to explore a technology which then seemed likely to be sold off abroad.

RHM has since bought out the British Technology Group's investment.

The grant towards scale-up has been approved by the Biotechnology Unit of the Department of Industry. It typifies the type of grant this unit, headed by Dr Ron Coleman, the Government Chemist, is most eager to make. Last year Dr Coleman persuaded Whitehall that instead of using civil servants to seek new initiatives the Government might take in support of biotechnology it should recruit some industrial scientists familiar with the scene.

As a result, for the past 18 months Dr Coleman has had a private "think tank" in London of four industrial scientists seconded for two years. "We're getting a good response from companies," he says. Some have even complained that the questions his experts ask are "too pertinent."

They have identified four priority areas where they believe British biotechnology should be stronger. One is biocatalysis (enzymes), where Britain has less than 2 per cent of a booming £250m-a-year world market dominated by Novo Industri in Denmark (50 per cent) and Gist Brocades in the Netherlands. Both the food and the detergent industries are said to be crying out for innovation in bio-catalysis.

Another priority area is diagnostics, seen by the think tank as embracing both monoclonal antibodies and biosensors. Diagnostics is a fast-expanding market of evident interest to the venture capital market.

While many innovations may seem ideal for the new biotechnology firm, the multidisciplinary skills needed—for example, genetic engineering plus advanced microchip tech-

nology to make a bio-sensor—may overwhelm the NBF.

The third priority area they identify is for genetic engineering in agriculture. ICI disclosed this summer that it was discussing a major collaboration with Carda, a Swedish agribusiness group with large interests in sugar and seed breeding. ICI's interest focuses on Carda's Hilschberg subsidiary, specialising in plant breeding, as a potential outlet for its own novel plant science, now seen as ripe for application to agriculture.

The fourth priority area is process plant, discussed in more detail on Page 2 of this survey. A major new initiative here is the emergence of Porton International.

Porton International is the brainchild of Mr Wensley Haydon-Baillie, its chairman, a London businessman who has spent nine years defining and selecting the ingredients for a new biotechnology group. He describes it as a "broadly-based internationally organised commercial biotechnology group."

How broad can best be answered by Mr Haydon-Baillie's claim that it embraces 10 activities in biotechnology. He knows of no other that embraces more than three.

Porton International brings together two small UK companies and three U.S. ones. The British representatives are IEF Fermentation, specialising in bio-reactors and mass cell culture, and Speywood, specialising in blood products such as Factor VIII. The U.S.-based companies are International Medical Diagnostics (diagnostic tools of all kinds), IGB Products (the group's research company in California), and OMEC Inter-

national, an in-house biotechnology data bank.

A basic requirement of commercial biotechnology as Mr Haydon-Baillie sees it, "is extensive and accurate information."

"The company starts life with six UK locations, four in the U.S. and one in Hong Kong. The headquarters are in London and Washington.

The company has impressive backing from Legal & General Assurance and the pension funds of Barclays Bank, Esso, ICI and the Imperial Group.

Porton's funds—"larger than Celltech's—are fully committed and include no venture capital. Its chairman says he waited for the first wave of investor interest in biotechnology to subside to take advantage of "the first commercial decade." He sees it as pioneering a new kind of new biotechnology company dedicated to the Japanese principle of "don't discover it, develop it."

Porton International is making its public debut at Biotech 84 with the biggest of the exhibits. Its technical strength is as diversified as its commercial ambitions, but rests heavily on the relations it has forged with the Government's Centre for Applied Microbiology and Research on Porton Down, a Public Health Laboratory Service research centre specialising in biotechnology.

An example of the intimacy of these relations is Porton's exclusive licence from Birmingham University to make and sell a new herpes vaccine, using facilities Porton Down is installing, paid for by the Department of Health.

Close links with academic world

CONTINUED FROM PREVIOUS PAGE

advisers led by Dr Charles Weissmann, of Zurich University, inventor of genetically engineered alpha-interferon.

Dr Julian Davies, 52, the Welsh-born biochemist who runs the Geneva end of Biogen, retains his academic links with Geneva University while endeavouring to run his laboratories with the freedom and informality found in universities. He encourages individual links with universities at all levels, with a freedom that a big company might find intolerable. But for Dr Davies it is no more than recognising that in genetic engineering "university research is the font of basic techniques now and for the future. It's very important that we keep the two-way exchanges going."

ICI began to take a keen interest in the long-term possibilities of genetic engineering as early as 1972. In 1973-74, its

central laboratories financed a genetic engineering laboratory for Professor Ken Murray, at Edinburgh University. ICI had its own scientist working in this laboratory, while one of Prof Murray's team worked with ICI researchers.

By the late 1970s, ICI's main biotechnology objective had changed to the science of Pruteen, so it sought a new university connection, this time in a joint laboratory with Leicester University, "seeded by the success" of the Edinburgh venture, ICI researchers say. Today the joint laboratory under Prof Bill Brammer has a team of 10, including two permanently seconded by ICI, and a budget of £300,000.

Professor Sydney Bremner, in his keynote address to Biotechnology 84 at Wembley in May, warned industry not to confuse the roles of academic and industrial research in biotechnology. Industry should look to universities for the people and tools to pursue genetic engineering, but not for product ideas. But he advised industry to

keep close to universities if they wished to stay at the forefront of a fast-moving field. For most young people, the subject had only two periods, said Prof Bremner—"the past two years and the period before that."

Fears in 1983 that offers from overseas biotechnology companies were causing a heavy drain on Britain's top academic talent led the Biotechnology Directorate of the Science and Engineering Research Council to commission a study from the Institute of Manpower Services. This disclosed that about 250 British biotechnologists had emigrated since the mid-1970s, mostly to the U.S. and Switzerland. The outflow peaked in 1981 and 1982, at the rate of about 30 a year, and this rate may still be holding.

The demand for British talent is unlikely to slacken and may increase, the researchers found. Most of those who had left did not expect to return, because of lack of opportunities and lower salaries. Nevertheless, the directorates

sees the drain as less serious than it had feared. More worrying was the finding, in a second report from the same researchers, that Britain's biotechnology industry is creating only about 50 jobs a year.

The researchers found two main trends in demand. One was that the market for "genetic engineers" had stabilised; the other was a growth in demand for a range of bio-process engineering skills, particularly for fermentation specialists in research and development teams in commercial organisations. Elsewhere they found no evidence of a significant shift in the short-term balance of demand, or in the employment, recruitment or training strategies of employers.

Bioscience

Biotechnology

Biotechnology is one of the most exciting developments in science and industry. It offers the possibility of major improvements in the way medicines are developed and manufactured. It may help find new ways to produce food for livestock and people. It may help exploit new energy sources. But, as leading Wall Street analysts have pointed out, many companies claiming progress in biotechnology are actually talking about Bioscience. And, while Bioscience is a good general term covering theory and research, Bioscience only truly becomes Biotechnology once experiments in the laboratory transfer successfully to full-scale manufacture via product purification, stabilisation and application in the field.

Novo has been employing Biotechnology (albeit without using the term) for almost four decades in the manufacture of a wide range of specialised industrial enzymes, and pharmaceuticals including insulins at the frontiers of science. Novo has pioneered successful process design and control technique, and the design of specialised plant, in order to bring new and advanced products to market world-wide. Obviously no simple task for companies new to the field. Thus it may be fair to say that, at present, Novo is Biotechnology.

Novo Industri A/S is the world's leading producer of industrial enzymes and the second largest producer of insulin. Headquartered in Bagsvaerd, Denmark, the company markets its products in 120 countries and maintains research and/or production facilities in Denmark, Switzerland, France, South Africa, Japan, and the United States. Novo's research focuses on enzymes, diabetes, and polypeptides and is supported by specialised expertise in the production process of large-scale fermentation, extraction, and purification. The company's shares are listed on the Stock Exchanges in Copenhagen and London, and the ADRs are listed on the New York Stock Exchange.

Novo Biotechnology

Centocor™ Taking biomedical technology further

Centocor focuses on the definition and development of unique and highly significant biological materials, specifically monoclonal antibodies and immune factors—by working closely with a number of the world's major universities and research institutes.

Already the company is helping revolutionise cancer and viral diagnostics, medical imaging and human therapy. Two Centocor tests, CA 19-9 and CA 125, identify specific tumour antigens in gastrointestinal and ovarian cancer respectively. These diagnostic tests advance cancer patient management practices. Another test is specific for hepatitis B surface antigen, both free and hidden in immune complexes.

Important Centocor advances are also taking place in the in-vivo diagnostics area with the development of antibodies which, when injected, localise in a site and will contribute to cancer and cardiac therapeutic programmes.

To find out more about Centocor, their work and their products, contact Dr Hubert J.E. Schoemaker, President, Centocor Inc, 244 Great Valley Parkway, Malvern, Pennsylvania 19355, USA.

BIOTECHNOLOGY 4

A widening manufacturing span

Bioprocessing technology

UK-BASED companies can obtain from the Department of Trade and Industry's Biotechnology Unit a series of Which? style reports on the equipment available for bio-processing.

The 32 reports, prepared under contract for the Government by Matthew Hall Norcain Engineering, each covers a piece of essential biotechnology equipment from fermenters to foam detectors, for example.

These reports are available on a "need to have" basis. They were sponsored by the "think tank" or action group set up last year by Dr Ronald Coleman, the Government Chemist and its chief biotechnologist. This action group (see page 2 of this survey), recruited mainly from industry, advises him of opportunities for commercial biotechnology that Britain might seize with the help of a government initiative.

The biotechnology equipment reports have so far revealed no significant gaps in the inventory of the UK process plant industry calling for urgent government action.

Example

But these reports illustrate the broad span of manufacturing activity relevant to biotechnology. While publicly the new biotechnology firms (NBFs) specialising in cloning have tended to grab the headlines, privately the companies which are most strongly placed in the mid-1980s are often those partly or wholly devoted to bioprocess technology.

A typical biotechnology process includes a fermenter or

Porton International's bio-reactors at the Centre for Applied Microbiology and Research on Porton Down, near Salisbury

bio-reactor, the sealed vessel in which the organism is persuaded to breed. It will need nutrient feeds, agitation, cooling, instrumentation and a computer to keep the conditions within narrow limits. Sterility will be another important aspect.

The "soup" it yields will be diluted by modern chemical plant. It will need straining to get rid of the water and then careful purification to harvest what may be a tiny fraction of the total product. Quality control will be vital in this operation.

Such companies as John Brown Engineers & Construction and Matthew Hall Norcain Engineering have assembled a broad spectrum of expertise in biotechnology, enabling them to undertake installations as sophisticated as D. Searle's pilot plant at High Wycombe. Porton International is an

example of a company which has taken a highly developed expertise in the bio-reactor and added other skills and financial muscle to create a new force in British biotechnology.

A successful solution to some of the bio-processing problems may call for an intellectual effort no less than the cloning of a new target. Above all, it calls for gentle techniques of purification.

Pharmacia, the Swedish biotechnology group, has taken the work of Professor Arne Tiselius, a biochemist at nearby Uppsala University, which earned the Nobel Prize for chemistry in 1946.

It developed his invention of electrophoresis first into laboratory tools, for which the university itself was among its first customers. Then, as the requirements of biotechnology separated into more exacting, it developed into pilot and then

full-scale production techniques. Similarly, Pharmacia has worked closely with academia to harness chromatography to bio-separations. It foresees that the laboratory practices needed by the organic chemists would also be needed on a bigger scale by biotechnologists. Its chromatographic methods are used for example by Novo for purification of porcine insulin; and by Celtech to separate monoclonal antibodies. G. D. Searle is pointing one way to the future with its success in designing a product specifically to aid its clean separation by chromatography.

The object is to add a "tail" to the desired protein, with electrical properties that facilitate separation by ion exchange chromatography. Once the protein has been separated, its tail can be snipped off—also by chromatography—to leave the desired product.

Technique

The tools of biotechnology, for every stage from research laboratory to full-scale manufacture, represent a substantial sector of commercial interest. Their importance was recognised from the outset by some NBFs such as Applied Biosystems, a lusty American NBF, by larger biotechnology-based groups such as Pharmacia, and by some financial sources, notably Rothschild's Biotechnology Investments. The 24 quoted and unquoted investments of this trust reflect strongly its conviction that biotechnological progress depends importantly on high-technology tools.

Bio-reagents — "biologicals" as they are often called — are the bedrock of this business in tools for biotechnology. It is a constantly developing fine chemical business which has attracted not only the NBFs but established groups such as Amersham International.

Dr Stuart Burgess, Amersham's chief executive, admits that the company has had difficulties describing its product profile to the City, which have led it to play up medical diagnostics and play down its contributions to biotechnology research. But last year it introduced 200 new "biologicals" — half of them not radio-active — for research workers.

It claims to be world leader in sales, which accounted for more than one-third of its turnover. It achieved this position, Dr Burgess says, by keeping close to the research workers across a broad swathe of biological R and D, including that of the major drug houses.

His point is important and underscores why Amersham has been so insistent that it should remain independent of the

any controlling interest by one company. Innovation in this fast-moving field cannot be achieved in isolation but requires close contact—even collaboration—with the market, which in this case is the research and development community. Suppliers need the full confidence of fiercely competing drug companies so as to maintain a good service.

DTI's Biotechnology Unit is digesting the report of a second contract placed with industry; to study the future needs and markets of biotechnology in Britain. John Brown was the contract, not least because of its experience with Britain's biggest biotechnology process, ICI's Pruteen operation on Teesside.

The main thrust in the future will be a shift from small-scale plant, making high-value products, to increasingly larger plants for products of lower value, at high production rates.

Its study, led by Mr M. J. Stewart, general manager of John Brown's biotechnology activities, looks at the opportunities to the year 2000. During that period it sees biotechnology growing at 7 per cent a year — the kind of growth the electricity supply industry enjoyed until the big oil price increases of the 1970s.

The study suggests that biotechnology process plant could be worth a net balance of \$800m to the British economy (at present-day values) by the end of 1990, and could be employing about 40,000. The accompanying table shows its estimates for the four broad subdivisions of this market.

| Biotechnology equipment market by 2000 | per cent |
|--|----------|
| Fermenters | 40 |
| Cell separators | 5 |
| Sterile valves | 15 |
| Downstream process items | 40 |

Source: DTI Biotechnology Unit/John Brown

The study concludes that the main thrust will be a shift from small-scale plant making high-value products to increasingly larger plants for products of lower value at high production rates. The pattern is already evident in the U.S., it says, and UK industry must prepare itself in the next five years if the U.S. and Japanese process plant industries are not to reach an unassailable market position.

High hopes

It expects the market for new biotechnology processes to lie mainly with health-care products up to 1990, with specialty chemicals and a few commodities arriving in the early 1990s, and an increasing number of large-scale chemicals later in the 1990s. It has high hopes of a major demand for chemical aids made by biotechnology to assist tertiary oil recovery.

It identifies a score of areas where it says customers are demanding better performance. Unsaid but clearly implicit, however, is the suggestion that Britain lacks the special — and all-important — range of expertise and skills of a Pharmacia in the area of downstream processing, while the universities are criticised for failing to feed British industry with good ideas concerning biotechnology process plants.

The John Brown study is to be discussed with industry at a meeting in London organised by the DTI Biotechnology Unit on September 20.

Achievement

It claims to be world leader in sales, which accounted for more than one-third of its turnover. It achieved this position, Dr Burgess says, by keeping close to the research workers across a broad swathe of biological R and D, including that of the major drug houses.

His point is important and underscores why Amersham has been so insistent that it should remain independent of the

Demand for projects worth backing

Venture capital

THERE SEEMS to be plenty of venture capital available to launch new ideas in biotechnology. What is lacking, the venture capitalists in Britain say, is ideas worth backing and inventors they believe capable of becoming successful businessmen.

As one City banker puts it: "It's a seller's market and they are making the entrepreneurs sweat."

A fairly typical City view is expressed by Mr Derek Allam, chief executive of Pruteen, venture capital funds from the Prudential. He wants to back biotechnology, believes Britain needs more of it, and has the skills in Pruteen to manage it. But too few good ideas and good people are coming forward, especially from the universities, he says.

Biotechnology Investments, the N M Rothschild trust launched in 1981 to specialise in biotechnology ventures, was in its third year of operations before finding ventures in Britain that met the exacting standards it requires of investments. Even now it has invested in only three British-owned start-ups in a portfolio of 34 investments, with one more likely to get backing this autumn. Two-thirds of its cash is invested in biotechnology.

In the public sector, Dr Ronald Coleman, the Government Chemist, has access to substantial funds from the Department of Trade and Industry to support biotechnology. He, too, expresses disappointment with the calibre of ideas coming from the academic community.

There are perhaps about 10 sources of venture capital in Britain with a declared interest in biotechnology. Behind them stand several times as many houses willing to put up second-round finance. But there is no scramble to invest.

The tendency is for the City to discuss ventures informally, lay bare their shortcomings, and explore joint financing of the more promising propositions.

Celtech, launched in 1980 with four City investors plus a government stake, is the classic example. It may be repeated shortly with a "country cousin", Agricultural Genetics Company (AGC), with access to the bio-science of the Agricultural and Food Research Council. AGC, backed mainly by Ultramar, has been seeking more investors to provide launch capital of about £15m.

Dr John Walker, a scientist who has seen biotechnology as an industrial researcher and as a City investor, believes the technology has come a long way from the heady days of Ultramar, has been seeking a panacea. About 200 new biotechnology companies were launched in the late 1970s to early 1980s. Estimates suggest that the private U.S. investors

put about \$1bn in these companies in 1983.

Dr Walker, joint director of investment for Charterhouse Japhet, a \$15m venture capital fund with an interest in health-care and bio-sciences, says the first five years of frenetic activity have served to crystallise ideas. Most new biotechnology companies have recognised that they cannot make it alone with new health-care products. They need the support of established patrons — the big drug houses and instrument companies. Even Californian pioneers such as Genentech and Cetus recognise this, Dr Walker says. Celtech has found a partner in Boots for its diagnostic products based on monoclonal antibodies.

A different approach has been adopted in putting together Britain's latest biotechnology venture, Porton International. Disparate but well-established activities in biotechnology are being knitted into a single biotechnology group backed by substantial City funds. Key components are LH Engineering, specialists in small but highly sophisticated bio-reactors; Speywood, a blood-products company formerly backed by Pruteen and the British Technology Group; and exclusive access to the intellectual property of the Public Health Laboratory Service's genetic engineering research at Porton Down.

The incentives differ widely from nation to nation. Many are eyeing apprehensively the scale of government backing declared by Japan, although closer analysis shows that it is not out of line with public investment elsewhere.

Biotechnology Investments remains a touchstone of quality because of the rigour of its investment analysis, as specified by Lord Rothschild, the Cambridge scientist who created the trust. It has cast its net internationally and concentrated on evaluating other people's propositions rather than trying to create its own opportunities.

Lord Rothschild, in his latest annual report, says the \$80m (£81m) trust is "encouraged by the continuing flow of new proposals for investment in unquoted companies and we remain confident of finding further attractive opportunities to expand our portfolio." In the year to May 31, it received 54 investment proposals including 34 from the U.S., 12 from Britain, two from West Germany and one each from Australia, Belgium, Cire, Israel and Switzerland.

It made initial investments in eight, including three directly in the UK — Celtech, IQ (Bio), and WMC. Two more were made indirectly in the UK — Genzyme and Interferon — Plant Laboratories, both U.S. owned. The other three are also U.S. companies.

Too many biotechnology shares were over-valued in the

enthusiasm of the new companies boom, says Mr David Leathers, investment director of Biotechnology Investments. Many with no hope of profits before 1987-1988, are still overpriced, he believes. Many investors have found themselves stuck with shares they did not understand.

"They were in it for the quick dip." The shake-out in share prices has caused surprisingly few new companies to go under. But it has damaged morale in some, including a few which Mr Leathers regards as a sound long-term investment for their ideas and management — provided they are protected from stock market hysteria.

Biotechnology Investments is reviewing about 37 new propositions for investment — a record number — and is "encouraged by the quality of the proposals," Mr Leathers says. It expects to make its first unquoted investments in Europe (outside Britain) this autumn, in Belgium and Ireland.

But it sees Europe's lack of an established unlisted securities market as a handicap. "It's going to be a slow process in Europe," Mr Leathers says.

Biotechnology is likely to be dominated by health-care products into the 1990s. The close connection between such products and new medical technology has been recognised by several venture capital firms, and is reflected in the portfolio of 31-investors and the prospectus of Charterhouse Japhet.

For Coherent, venture-capital arm of Legal and General Assurance, health-care is one of three business sectors, along with instrumentation and technical software. It is focusing initially on biosensors and diagnostic virology.

Biotechnology Investments broadens the company's sphere of investment to include certain areas of health science that do not incorporate biological processes," Lord Rothschild says. Through the Royal College of Physicians, a distinguished panel of doctors was invited to say what the profession most needed from scientists. They picked out six priority needs:

- Simple, cheap DNA probes for diseases, including cystic fibrosis, Down's Syndrome and muscular dystrophy.
- Simpler, more specific techniques for rapidly diagnosing viral, bacterial and parasitic infections.
- Infection-free blood products such as Factor VIII, Factor IX and albumin, made by genetic engineering.
- Better vaccines for common diseases such as whooping cough, measles and hepatitis.
- A cheap, first-class supplement to replace maternal milk at weaning.
- More effective and specific ways of aiming agents to specific cells for the diagnosis, monitoring and therapy of cancer.

Lord Rothschild, in his latest report to shareholders, says he is gratified to find that the doctors' requirements "coincide so well with the aims of those companies in which we have already invested."

Scottish Development Agency

Health Care and Biotechnology Division.

For over two years the Health Care and Biotechnology Division of the Scottish Development Agency has been working with companies in Scotland and elsewhere and with universities and research institutions.

We specialise in:

- NEW PRODUCT SEARCH AND DEVELOPMENT
- COMMERCIAL APPLICATION OF R AND D
- TECHNOLOGY TRANSFER

Health Care and Biotechnology Division has projects up and running in areas including:

- HYBRIDOMA TECHNOLOGY
- SPECIALIST CHEMICALS
- GENETIC ENGINEERING
- IMMOBILISED PLANT CELLS
- PROCESS ENGINEERING

If you are a company or researcher seeking advice on new product strategy or on commercial development, please contact the Health Care and Biotechnology Division, 120 Bothwell Street, Glasgow G2 7JP. Tel: 041 248 2700.

Your key to British biotech.

Let the new Directory of British Biotechnology be your key to British biotech.

There's comprehensive, easy-access coverage of both commercial and academic research:

- who to contact, and how
- biotech areas involved
- production techniques
- overseas sales figures
- numbers of graduates
- R&D expenditure
- academic funding.

This Directory is becoming an essential link between British universities and British industry.

To obtain your copy, simply complete the coupon, and return it with your remittance to: Carvermill Publishing Limited, PO Box 33, St Andrews, Fife KY16 9EA.

WALL STREET

Easier close after late rally fails

AN ATTEMPTED rally late in the session failed to find support on Wall Street yesterday leaving shares to close easier on the day, writes *Michael Morgan in New York*.

By the close, the Dow Jones industrial average was 4.86 lower at 1,202.52 on moderate turnover of 75m shares - its lowest since August 15 - having been 1.87 ahead with half an hour to go to the final bell.

At the opening, the Dow had dipped 10.38 to 1,196.99, its lowest level of the day, but it regained the 1,200 mark around lunchtime.

Stocks again took their lead from the performance in the credit markets where early prices of Treasury coupon issues were broadly lower on the back of a federal funds rate which opened at 11 1/2 per cent and in the wake of the Treasury's formal ban on the sale of bearer securities with government backing.

The funds rate later slipped back to 11 per cent after the Fed had stepped in to add temporary liquidity through an overnight system repurchase arrangement with the funds at 11 1/2. This was the seventh consecutive trading session

in which liquidity has been added. Later in the day the funds rate was quoted at 10 1/2 per cent.

Analysts remained divided over how to interpret the recent rash of Fed repurchases. Theories have included an easing in credit stance, though many analysts believe they are the result of technical adjustments.

Another view advanced yesterday was that market expectations were fuelling the gyrations, and that the Fed itself had taken no substantive action.

Meanwhile, analysts were also studying the implications of the statement late on Friday by Mr Donald Regan, the Treasury Secretary, that U.S. Government-backed securities cannot in future be repurchased by Wall Street brokers and sold to foreigners in bearer form ensuring the holders' anonymity.

In the credit markets, prices of Treasury coupon issues firmed in the wake of the Fed's overnight system repurchase arrangement. At the long end, the key long bond, the 12 1/2 per cent of 2014, which was down 1/4 early in the session, later added 1/8 to 101 1/2.

At the short end, the yield on three-month Treasury bills dipped 14 basis points to 10.39 per cent while six-month bills yielding 10.53 per cent were 13 basis points lower ahead of the results of the Treasury's regular weekly auction of bills.

In the event, the three-month bill produced a yield of 10.39 per cent while that on the six-month bill was 10.49 per cent, down from the 10.63 per cent and 10.75 per cent respectively seen last week. Money market yields were lower.

In the stock markets, General Motors shed 5/8 to \$72 as the group continued

discussions on a new contract with the United Auto Workers. The company has been targeted for a strike from Friday by the union, and some analysts say that such action could cool the economy sufficiently to reduce the pressure for higher interest rates.

Among active issues, Revlon traded unchanged at \$38 1/2, ex-dividend, while Alcan Aluminium at \$26 was 5/8 lower. American Express was 5/8 easier at \$31 1/2.

Merck in chemicals shed 5/8 as proposals were agreed with the unions for a new contract.

U.S. Steel traded unchanged at \$24 1/2 as its chairman announced that the group plans to sell an additional \$1.5bn of assets by 1988.

In the oil and gas sector, Tennessee eased 5/8 to \$38 1/2 as it announced that its Packaging Corporation of America division had acquired Exco Products from American Home Products.

On the American Stock Exchange, active issues included Astrotech International, up 5/8 to \$3 1/2. Wang Laboratories which shed 5/8 to \$26 1/2, and Gulf Canada which was 3/4 easier at \$14.

LONDON

Gilts buoyed by hopes of mine accord

FRESH support emerged for London gilts yesterday as investors appeared to find encouraging signs of a breakthrough in the miners' strike.

Funds managers sought short and longer-dated gilts as sterling edged away from its lowest level against the dollar. Selected shorts closed 1/4 up, while longs gained 1/4 for a two-day advance of 1/2 in places.

The enthusiasm for government stock overflowed into equities with speculative interest in foods adding 1 1/2p to Lennons, the supermarket chain, at 57p.

Burmah Oil and Shell Transport were 8p cheaper at 180p and 635p respectively, while Tate & Lyle eased 5p to 37 3/4p.

Most leading shares drifted easier and, apart from the gilt stimulus, were forced lower by the early Wall Street downturn. The FT Industrial Ordinary index, off less than 2 points by 3pm, closed 4.3 lower at 847.4.

TOKYO

Uncertainty results in retreat

AN UNCERTAIN market climate prompted Tokyo investors to retreat to the sidelines, and share prices closed lower yesterday, writes *Shigeo Nishizawa of Jiji Press*.

The Nikkei-Dow market average lost 29.17 to 10,471.53. Trading was very thin at 218.27m shares compared with 245.35m last Friday. Losses outnumbered gains 391 to 280, with 211 issued unchanged.

Investors were discouraged by the drop on Wall Street at the end of last week and the yen's continued slide against the dollar. Most major financial institutions and securities companies, which close books at the end of September, stayed away from the market.

In featureless trading, hiotechnology-related stocks were active in the morning, but buying interest shifted to small-capital cash-traded issues in the afternoon.

Taiyo Fishery jumped Y13 to Y233 on rumours of a launch into hiotechnology. The issue was the day's most active with 18.70m shares changing hands.

Kuraray, a popular hiotechnology issue, touched Y1,000 for the first time at one point but later dropped under profit-taking pressure to close at Y950, down Y30. Kuraray was the second most active with 13.34m shares traded. Teijin added Y5 to Y400, and Yamanouchi Pharmaceutical Y40 to Y1,480.

In the afternoon session, Tokyo Tanabe scored a daily limit gain of Y100 to Y810, bolstered by rumours that it would supply manufacturing technology for a paediatric drug to a U.S. company.

Copal leaped Y50 to Y989 on speculative buying. Pacific Metals rose Y24 to Y512 on the strength of brisk semiconductor demand. Shoko gained Y38 to Y785, and Sansui Electric Y74 to Y800.

Many blue chips declined on small-lot selling. Sony fell Y90 to Y3,480, TDK Y20 to Y5,260, Matsushita Electric Industrial Y30 to Y1,580, Toyota Motor Y30 to Y1,360 and Hitachi Y8 to Y832.

Foreign selling through the four ma-

for brokerage houses totaled 16.5 sbars in the morning, surpassing buying of 12.5m. But trading lots were small, said a major securities company official.

Tokyo Electric Power declined Y30 to Y1,180 on small-lot selling triggered by the weaker yen. Mitsubishi Heavy Industries dipped Y2 to Y230.

Bond prices reflected the yen's softness. The yield on the benchmark 7.5 per cent government bond, maturing in January 1993, edged up to 7.195 per cent from Friday's 7.180 per cent.

EUROPE

Bias weaker as business stays slow

ANOTHER day of scorching initial gains for the dollar left European bourses somewhat dazed yesterday, and a weaker bias emerged in generally slow business.

Activity was busiest in Paris, where profit-takers moved in. This came after a good run-up last week on prime ministerial assurances that austerity measures would be maintained. The Indicateur de Tendence shed 1.3 to 112.7.

Declines of FFR 85 apiece were registered by BSN Gervais at FFR 2,630 and Roussel-Uclaf on FFR 1,430. Peugeot fell FFR 7.80 to FFR 213.20 amid the loss by its Talbot UK unit, while Michelin lost FFR 22 to FFR 635.

Among the few to resist were Matra,

FFr 18 ahead at FFR 1,617, and Ploclair, 50 centimes firmer at FFR 54.

With the dollar testing DM 3, Frankfurt edged cautiously lower. Frankfurt were noted particularly among the car makers and attributed to their recent strike-affected sets of six-month results as well as to worries on how model price rises would be received.

Daimler Benz shed DM 7.50 to DM 525, Porsche DM 6 to DM 991 and BMW, which announced a joint venture with General Electric to aid U.S. distribution, dipped DM 2 to DM 376.

Engineerings and steels, repeating a pattern of recent weeks, held out against the trend. Linde added DM 2 to DM 362, and Thyssen DM 1.80 to DM 78.30.

A firmer domestic bond market, aided by promising pointers last week on inflation and output, enabled the Bundesbank to sell DM 32.4m in paper. Price gains ranged to 15 basis points.

This turnover exaggerated Amsterdam movements. Among the sharpest of these were a Ff 6 fall for Heineken to Ff 134.50 on disappointment with Friday's results; a Ff 1.30 rally by Bos Kallis to Ff 18.80 following a two-day slide of Ff 1.40 on fears of payment difficulties; and a Ff 4 decline for recently volatile Nedlloyd.

Milan, hit last week by rate rises, was further affected by a liquidation of positions ahead of settlement day next week. The Banca Commerciale index moved 0.94 lower to 212.31, but some blue-chip losses extended well beyond that.

Fiat faced selling pressure ahead of its large-scale capital increase which also gets under way next week. Defence action held its final loss, though, to L61 of L4,250. Bonds were mixed.

A well maintained Brussels featured Vieille Montagne, which gained BFf 125 to BFf 4,780 - for a three-day surge of BFf 400 or more than 9 per cent - as rumours persisted of a takeover by Hoboken, itself BFf 30 higher at BFf 5,980.

An absence of institutional support depressed Stockholm. Electrolux, the most active on a low-volume day, slipped SKr 4 to SKr 243.

Copenhagen brought Novo back to the DKr 4,000 mark with a DKr 40 rise, while Norsk Data was unchanged in Oslo at Nkr 320 as it filed for 900,000 shares in ADR form in New York.

Madrid, drawing benefit from increased foreign awareness, moved higher. Gains were led by Telefonica, up 3.8 points to stand at a peak 99 per cent of Pta 500 nominal value.

Zurich was closed for a holiday.

COMMODITIES AND AGRICULTURE

Producers prepare for coffee negotiations

By Our Commodities Staff
COFFEE producing countries began talks in London yesterday preparing their strategy for the negotiations with consumers next week on the terms of the International Coffee Agreement for the forthcoming 1984/85 season.

As usual the main items for discussion are the allocation of export quotas amongst the producers, and pressure for a rise in the agreement's price range. The main discussion this year is expected to centre on pressure from the smaller exporting countries for increased quotas.

Consumers would welcome a rise in the global quota but will also be seeking more flexibility. India needs a substantially higher International Coffee Organisation (ICO) export quota for 1984-85 ending September 30 than the 1983-84 quota of 38,550 tonnes to absorb increased local production.

European zinc producer price reduced by \$50

By JOHN EDWARDS, COMMODITIES EDITOR

ZINC dropped to the lowest level for nine months on the London Metal Exchange yesterday following news of another cut in the European zinc producer price.

All this provided confirmation that demand for zinc remains poor, and that the smelters are worried by the recent further decline in the LME zinc market.

Workers at Noranda's Valleyfield refinery in Quebec yesterday rejected the company's latest contract offer and authorised the union to call a strike.

LONDON METAL EXCHANGE WAREHOUSE STOCKS (changes in week ending Sept 7)

rebuilding stocks for the winter. Asarco cut its U.S. domestic lead selling price by a further 2 cents to 24 cents a lb.

Further ahead in the next few months, possibly exceeding the record levels reached earlier this year after India banned CTC exports last December.

London cocoa values see-saw

By Our Commodities Staff

COCOA prices see-sawed dramatically on the London futures market yesterday. After rising steadily in the morning, values suddenly collapsed in the afternoon on heavy speculative selling.

The December delivery position, after reaching a high of \$1.10 in early trading, ended the day at \$1.025 a tonne, \$33 down on Friday's close.

There was no known fundamental supply-demand developments to account for the sudden turnaround. A stressed speculative selling created nervous conditions at the higher level and triggered off a stop loss selling that accelerated the decline.

Mr Leslie forecast soyabean output at 1.58bn bushels, revising his estimate of 2.06bn last month. The U.S. Department of Agriculture last month put maize output at 7.66bn bushels and last year at 4.16bn.

Emilia Tagaza on a problem for Manila Bleak market conditions force Philippines to curb sugar output

SUGAR, which was once the Philippines' number one export earner, is being down-graded in the Government's list of favoured crops. The continuing decline in world prices and spiralling production costs have forced the Government to set new policies that deliberately reduce the country's sugar output.

President Ferdinand Marcos has declared that for the next crop year (August 1985 to July 1986) the Philippines will reduce its sugar output to 1.8m tonnes. Output has been shrinking in the past few years from 2.4m tonnes in 1982 to 2.2m tonnes in 1983, and an estimated 2.1m tonnes in the current crop year.

Crop loans to be made available to sugar planters next year will be 2.1bn pesos (a 15% increase) compared with sugar financing of 2.7bn pesos last year, which produced an output of 2.2m tonnes.

SUGAR planters in the Negros region reported that Typhoon Ike, which hit the coast, did not help its neighbours about 15 per cent of the crop. They said, however, that some cases could still be recovered so they could not quantify how the damage will affect total output.

Negros Island accounts for 75 per cent of Philippine sugar production. The typhoon was the strongest in 14 years, exports dropped to \$299m, almost 30 per cent less than the previous year's earnings of \$410m.

Sugar production has been declining in the last three years, not so much because of Government policies, as the planters' low motivation to produce more. Morale has been low because of acrimonious relations with the Government's sugar monopoly, the National Sugar Trading Corporation (Nasutra).

Negros planters and an official of the New Alliance of Sugar Producers (NASP), said Nasutra refused to buy producers' export sugar if they did not also sell their domestic sugar.

Planters are required by Philscom to split their output into 60 per cent export and 40 per cent domestic use. Another source of friction is pricing. Prices paid to planters are based on the "composite price" derived from the weighted prices of domestic and export sugar.

The composite price was increased last July to 300 pesos per metric tonne (11.5 U.S. cents a pound) to cope with the average break-even price of 11c a pound. However, often Nasutra does not pay the full amount at once so that producers are short of funds to finance their crops.

Dollar retreats after DM3

Profit-taking set in on the foreign exchanges yesterday when the dollar touched the DM3 level. This was reached in the East before Europe began trading and although the dollar opened in Frankfurt at around the same level it retreated quickly, and never threatened the DM3 level again during the day.

After the initial surge the dollar settled back to close below last Friday's finishing levels in New York, but still at record closing highs as far as Europe was concerned. It rose to the highest level for 11 days against the D-mark at DM 2.9890 compared with DM 2.8840, a record high of FF 9.1790 against FF 9.1875, and a seven-year peak of SwFr 2.4910 compared with SwFr 2.4845, but rose only slightly to Y245.60 from Y245.50.

Quiet trading

Trading volume was restricted by the absence of any fresh factors in the London International Financial Futures Exchange yesterday. Eurodollar interest tended almost unchanged on the day but down from Friday's closing levels, reflecting a virtually static cash market.
